Out No. 491:221 Kui:

Aan Prof. Dr C. C. Uhlenbeck ter gelegenheid van zijn 80ste verjaardag in dankbaarheid en verering opgedragen.

INTRODUCTION.

In the studies which have hitherto been published on the influence of the Austro-Asiatic languages on Sanskrit the foreign origin of the Sanskrit words was demonstrated mostly with the help of lexical materials taken from Further Indian, and even Indonesian, languages. This fact has given rise to the misconception that the majority of the Austro-Asiatic loanwords in Sanskrit have no etymological connexions in Munda, which, again, was explained by the supposed Uralian origin of the Munda family of speech 1). In reality, however, the reason why Munda word-materials played such a small part in these studies was mainly the fact that the valuable information which they can furnish cannot be efficiently utilized without a preliminary historical and comparative study of these interesting languages, which indeed have developed into a type of language which is rather different from the original Austro-Asiatic one.

The object of the present study, which deals with the origin of some hundred Sanskrit and Prakrit words, is to show that the Austro-Asiatic source from which these Aryan words have been derived was actually the Proto-Munda branch of Austro-Asiatic. The introduction of the new term Proto-Munda is justified by the fact that, as early as the Vedic period, the Munda languages had departed considerably from the Austro-Asiatic type of language and developed a character of their own brought about by a number of dialectal phonetic changes and the introduction of suffixes in the word-formation. Both phenomena mark the beginning of a process of "Dravidization" of the Munda tongues which has ultimately given them the character of agglutinating languages and has thus contributed to the growth of the Indian linguistic league (Sprachbund). The earlier stages of this development, which are reflected by the Sanskrit loanwords, are here denoted by the general term Proto-Munda.

This book is a votegor ngóregor inasmuch as circumstances have led to its separate publication prior to the appearance of "Munda and Proto-Munda", as an appendix to which it was originally conceived and whose conclusions it presupposes. Since the methods here developed may arouse doubts as to their soundness, I wish to emphasize the fact that they are the outcome of a comparative and analytical study of modern Munda. Not before they seemed to be firmly established have I proceeded to apply them to the foreign words of Aryan.

Among the morphological features of Proto-Munda the extensive use of prefixes (which in the modern dialects have ceased to be productive) deserves mention. As for the "sound-laws", they present unexpected

¹⁾ Cf. K. Régamey, Polski Biuletyn Orientalistyczny II (1938), pp. 34. 36.

difficulties of fundamental interest. In the belief that Munda would show the same regularity of phonetic correspondences as found in Indo-European I have been led by the comparison of clearly related words to formulate a number of laws, e.g. the unvoicing of voiced stops, and the change of a cerebral phoneme (d) to d(t), r, r, l, etc., such variants as S. bigo bogo~ piko poko "fat" or So. dan ~ ran "to obstruct" being explained as originating in different dialects. On these theories the following wordstudies are still based. After the completion of this book, however, my views regarding the interpretation of the observed correspondence of sounds (the correctness of which is, I venture to think, beyond doubt) have fundamentally changed. The theory of dialect-mixture is, indeed, inadequate to account for the many variants of a word often found in Santali, as it would necessitate the inference that this language has some sixteen different "dialectal" representatives of d, which vary even in one and the same word, e.g., S. dila dale ~ lida lade "to totter" (cf. Hi. thot ~ thos ~ Skr. śotha-, etc.). Nor does the comparison with other Austro-Asiatic languages enable us to solve this problem for there we find the same interchange of voiced and unvoiced stops (e.g. Semang deldul ~ Sakai teltûl "heel", Prong don ~ Semang anton = M. Kh. boton, So. báton "to fear") 2) and a similar variation of d, r, l, s (see p. 133 with Add.). The inference that a free variation on a large scale (though within definite limits) was characteristic of Austro-Asiatic is inevitable. I accept, therefore, the explanation suggested by Professor C. C. Berg with regard to similar phenomena in Indonesian, viz. that the Austro-Asiatic consonantal system had a relatively small number of phonemes with a wide range of possible realizations, the following sounds, for instance,

$$\frac{dt \sim dh th \sim r \sim j c, s}{dt \sim dh th \sim r \sim r \sim \frac{s}{s} \frac{s}{z \cdot s} \frac{s}{s}} \sim y \sim l$$

originally having constituted one phoneme. On the strength of such suffixed forms as *kabal, *kabar, *kapat, *kamac (presupposing *kabad from ka-ba) 4), which cannot have been inherited from Austro-Asiatic as suffixation seems to have been introduced in Proto-Munda under Dravidian influence, we may infer that in Proto-Munda this phoneme still admitted the same variation, and the frequent occurrence of fully parallel expressions in Santali (e.g. dok dok : rok rok ok : sok sok "projecting", dik ok : lik ok "to be loose") is only intelligible if they are one and the same word which allowed a variable pronunciation of the phoneme drl until a

²) Cf. also Kurt Wulff, Über des Verhaltnis des Malayo-Polynesischen zum Indo-Chinesischen, Copenhagen 1942, p. 17 f.

³⁾ Proto-Munda *s may be inferred from Skr. masa-, kalmasa-, lasva-, lasva-, sanga-, sand(h)a-. As for h from dh (cf. Hi. hamew p. 19, desi hulhulia p. 69) it is probably of comparatively recent date.

⁴⁾ See p. 35 and cf. pp. 60, 157.

late date 5). The analogous phenomena in Dravidian (see p. 130) suggest a similar explanation. (Note the equivalence of t c and m v in the alliterating verses of the $m\bar{o}naittotai$ -type). On the other hand, the many Munda synonyms with varying initial gutturals, dentals and labials are not, in my opinion, due to sound-variation but to parallelism: they are rhymewords (e.g., S. butra: gutra: dundga: mundga, pp. 99, 105, etc.).

Another Proto-Munda phenomenon inherited from prim. Austric is the nasalization and prenasalization of the consonants of a root. Thus barda (warda) may become barnaa, barnaa, mardaa, marnaa, similarly darda may occur as darnaa(daraa) aaraa(daraa). Further may be noted the aspiration of consonants, the change g > h (e.g., Skr. Kekayar. Haihayar) 7), the loss of initial h (if this was a distinct phoneme at all), the variation g > f (c. s) and g > h (p), and the sporadic change of intervocalic g and g to g (cf. Nep. g tuhuro, g (see Turner, Introduction to his dictionary, g (see XV) and Festgabe-Jacobi 39. Chatterji 892 and g assim).

Since moreover the vowels are largely interchangeable S), and since the Austro-Asiatic (and Proto-Munda) prefixation has left many traces in the lexical materials of present-day Munda, the derivatives from one and the same root have often widely divergent forms; e.g. Skr. tunda- and cañcu- from da-da, venī-, kabarī- and āpīda- from wa-da, jaṅgāla- and Hi. aṇaṅgā, thek and roknā from da-ga, Hi. aṇnā (?), huṇkā and Nep. taghāro from ga-da, Hi. jhagṛā, aṇaṅg and S. etraṅ from da-ga. From the point of view of methodology this is. I think, the chief difficulty of these investigations, as by a purely mechanical application of the "sound-laws" nearly everything can be demonstrated. This fact strongly diminishes the stringency of etymological explanations (which even in other fields of study, as for instance Indo-European linguistics, are so often unconvincing). A careful collection of many cognate Munda words is essential in order to determine the original Munda root, and an equally careful comparison of their meanings is often needed to attain in our results the

⁵⁾ The consonantal and vocalic variation is mainly found in word-groups whose meaning is associated with special sensorial or emotional ideas, e.g.—fat, swollen, pregnant', 'projecting (see s.v. pacha-, śikhā-, śindā- and cf. the words relating to what is known as the 'castration-complex of Western man danda-, banda-, jāngala-, śintha-). Words for hand (So \$7- Kh. M. tī', S. K. tī ~ Bessi tīh, Sakai tihi), 'ploughing (S. M. Kh. si ~ Palating that, Mon. thea) 'day. (S. sin, M. singi, K. sin- ~ Khasi sin, Pa'auna ha-nī ~ Khmer thinay, Mon. tanoa). oil (S. M. K. sunum ~ Senoi sēnum Tihetan nām), thea S. ii. M. sin, K. čin, tsin, śin, sīnj ~ Kha-ii diā, Palating tīh, and in Tileto-Burman Khimi thiri ~ Mainha śin-śe, Abor cśin, śin, Tibetan sin, etc.) hardly vary at all

⁶⁾ For a full discussion of this phenomenon see Munda and Indonesian", an article to be published in Orientalistische Bijdragen, Herdenkingsbundel van het Oostersch Genootschap in Nederland

⁷⁾ Cf. Luders, Philologia Indica 168, n. 4.

San Division, Annual Proceedings and a second of the analysis

highest possible degree of certainty and to avoid that such etymological studies degenerate into a mere play with formulae. I do not pretend that the following articles fully answer to this standard 9). Nevertheless, as a first attempt at a methodical treatment of these questions they may have some interest in spite of their inevitable shortcomings. Those, to whom such an attempt would appear premature, may be reminded of Hugo Schuchardt's words: "Die Wissenschaft wäre nie vorgeschritten, hätte sie nicht vorgegriffen".

The main conclusions to be drawn from the present word-studies may be briefly summarized as follows: 1) A very considerable amount (say some 40 %) of the NIA. vocabulary is borrowed from Munda, either via Sanskrit (and Prakrit), or via Prakrit alone, or directly from Munda. 2) Wide-branched, and seemingly native, word-families of South Dravidian are of Proto-Munda origin. (The existence of isolate Munda words in separate Dravidian languages, as Telugu and the Northern Dravidian dialects, has never been questioned.) 3) In Vedic and later Sanskrit, the words adopted have often been Aryanized, resp. Sanskritized. The criteria applied by the Vedic language were of course most stringent: d, t, n were not "rein-Arisch" and often became d, t, n; l was changed to r, and perhaps b was sometimes changed into p (on the analogy of Pkt. b = Vedic p), see tūpará. The elimination of cerebrals is also found in later Sanskrit (as against Hi. t in younger borrowings), just as the substitution of r for Proto-Munda r. 4) As the development of Munda has been slower than that of Aryan, the aspect of many modern Munda words does not apparently differ much from their Proto-Munda original. Hence NIA. words, directly borrowed from Munda, often reflect more faithfully their originals than the Sanskrit words do, cf., e.g., Hi. kubar, kubrā: Skr. kubhra- (S. kubdha), Hi. potā: Skr. pota- "young of an animal", Hi. pūţh: Skr. pūta- "buttock", etc. In such cases, the NIA. form of the word points to a more recent borrowing (cf. Nep. tumbo which cannot be derived from Skr. tumba-).

Besides the difficulties pertaining to the Austro-Asiatic prehistory of Munda there is another problem, still more difficult perhaps, which arises from the close interrelations between Mundas and Dravidians extending over at least 4000 years. Since the phonetical developments of both families of speech run strikingly parallel, and since the words which they have adopted from each other, may have come to be treated as native words at a very early date, phonology and morphology do not often afford sufficient criteria to determine the origin of a word or word-group. The problems resulting from this situation perhaps belong to the most complicated which the student of historical and comparative linguistics has to solve. I have not eschewed a discussion of these questions whenever this was essential,

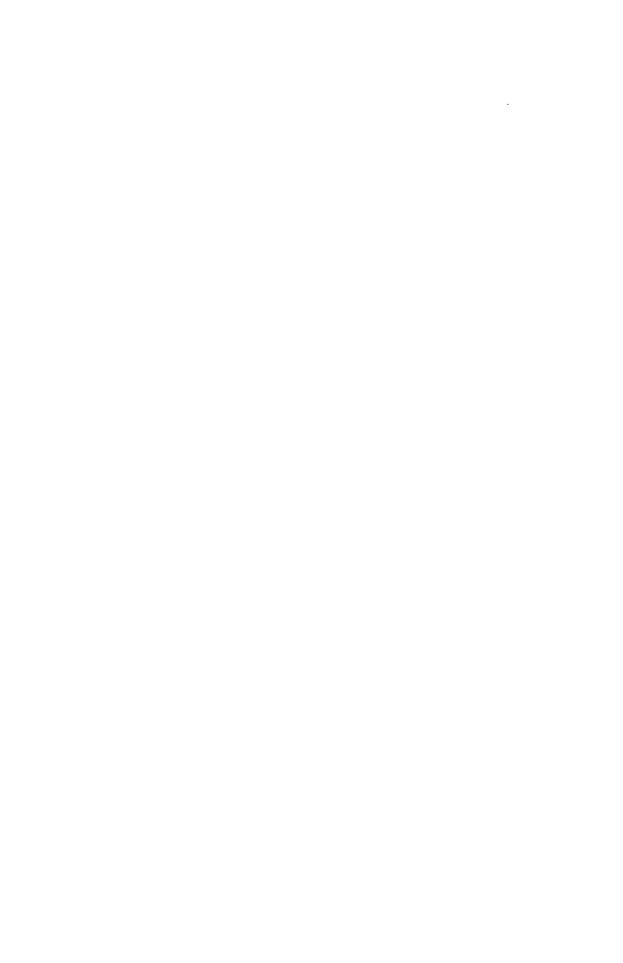

⁹) I had to write these studies without the aid of many indispensable dictionaries. I particularly regret that those for Marathi (by Molesworth) and Prakrit (by Sheth) and the 'Encyclopaedia Mundarica' were inaccessible to me.

although the solutions here proposed must necessarily be provisional. See, e.g., śuṇḍā-, khaḍga-, khora-, cipiṭa-, S. topoṇḍ (p. 92), and particularly p. 105 f. Somewhat different are the difficulties arising from the many Munda reborrowings from Aryan. For the purposes of the following studies this question is however of minor importance if the ultimate Munda origin of the words concerned is warranted by phonological or morphological characteristics.

This book necessarily deals only with the influence which Munda has exercized on the other linguistic families of India. This is, however, only one aspect of a wider problem. Many studies from different points of view will be needed before we can arrive at a right evaluation of the rôle which each of these families has played in the genesis of the Indian linguistic league. In view of the intensive interrelations between Dravidian, Munda and Aryan dating from pre-Vedic times even individual etymological questions will often have to be approached from a Pan-Indic point of view if their study is to be fruitful. It is hoped that this work may be helpful to arrive at this all-embracing view of the Indian languages, which is the final goal of these studies.

My sincere thanks are due to Mrs. B. M. Koch-Thomas, who has corrected the English text, to Mr. Alfred Master, who was kind enough to read part of the proof-sheets and to whom I am indebted for some useful suggestions and corrections, and to my pupil Mr. A. P. Kelder, who has undertaken the task of preparing the Index.

Nearly half a century has passed since Professor Uhlenbeck published his etymological dictionary of Sanskrit. Although much has since been done in this field, the majority of the very large number of words there labelled as "unexplained" still await explanation, and many explanations there given require reconsideration. May this little book, dedicated to my venerated guru on the occasion of his 80th birthday, show him that, although the progress made in these studies since 1899 is not perhaps spectacular, still it is hoped that the number of obscure words, even of those which have hitherto defied all attempts at explanation, will gradually be reduced.

ABBREVIATIONS.

Most of the abbreviations used in the present work do not require special notice. The following may be noted:

- Bhaduri = A Munda-English Dictionary by Manindra Bhusan Bhaduri, Calcutta University Press 1931.
- Bloch = J. Bloch, La formation de la langue marathe, Paris 1919.
- Bodding = P. O. Bodding, A Santal Dictionary, Oslo 1929-1932.
- Bohtlingk (or pw.) = Otto Bohtlingk. Sanskrit-Worterbuch in kürzerer Fassung, St. Petersburg 1879—1889.
- Campbell = A. Campbell, A Santali-English Dictionary, Pokhuria 1899 (2nd ed. A Santali-English and English-Santali Dictionary, ed. by R M. Macphail, 1933).
- Chatterji = Suniti Kumar Chatterji, The Origin and Development of the Bengali Language, Calcutta Univ. Press 1926.
- Geiger = W. Geiger, Pali, Literatur und Sprache (Encyclopaedia of Indo-Aryan Research, vol. I, fasc. 7), Strassburg 1916.
- Pischel = R. Pischel, Grammatik der Prakrit-Sprachen (Encyclopaedia I, 8), Strassburg 1900.
- Rakhal Das Haldar = Babu R.D.H., An Introduction to the Mundári Language, Journ. As. Soc. Beng. vol. XL, part I, pp. 46—67 (Calcutta 1871).
- Schmidt, Nachtr. = R. Schmidt, Nachtrage zum Sanskrit-Wörterbuch in kurzerer Fassung von Otto Bohtlingk, Leipzig 1928.
- Schmidt, MKV. = W. Schmidt, Die Mon-Khmer-Volker, Ein Bindeglied zwischen Völkern Zentralasiens und Austronesiens, Brunswick 1906.
- Turner = R. L. Turner, A Comparative and Etymological Dictionary of the Nepali Language, London 1931.
- Uhlenbeck = C. C. Uhlenbeck. Kurzgefasstes etymologisches Wörterbuch der altindischen Sprache, Amsterdam 1898 1899.
- Wackernagel = J. Wackernagel, Altındısche Grammatik. Gottingen (I, 1896; II, 1, 1905; III, 1930).
- Walde-Pokorny = Alois Walde, Vergleichendes Worterbuch der indogermanischen Sprachen, herausgeg, und bearb, von Juhus Pokorny, Berlin und Leipzig 1930.

1. $a r \bar{a} l a$ "crooked, bowed, curled (hair)".

In common use since the Epics. As Pali aļāra-shows, it stands for *arāļa-. The older form of the word occurs in arāḍa- "long-horned" (Maitr. S. 2, 5, 9, p. 59, 17) and in arāḍitara- "having very long horns" (S'at. Br. 4, 5, 5, 5). As for arāḍyàu Taitt. S. 5, 6, 21, 1, (ucchritaśṛṅga- Sāy.), for which most authorities assume an adj. arādyà-, Tarapada Chowdhury, JBORS 17 (1931), 37, n. 2, explains it as a fem. dual of arāḍi-. The sense of these Vedic words is due to the fact that curved horns are usually long. Inversely, S. daeka "wide-spreading and very long with an upward turn at the end (buffalo's horns)" is a derivative from da-ya "tall"; cf. laya "having horns standing wide out" where the notion "curved" is not implied. Tarapada Chowdhury's inference that arāda-, as being contrasted with tūpará-"hornless", must simply mean "horned" is not cogent. In the late Yaśastilaka arāla- is incidentally used in the sense "long" (arālakālam, comm.: pracura-kālaparyantam, see Schmidt, Nachtr.), which must be an imitation of the Vedic usage.

Cf. S. ladea, larea "crooked, bent, slanting (tree, stick)", lade "slanting, leaning to one side", M. lāreā "crooked, bent", ledhā, id., lidu "to bend" (for *lidu, cf. S. lirwa "to bend over, backwards or downwards" from *lidu-a; lerwa larve, lerwak' "to incline to one side, reel"); S. lara "having horns bending down forwards, having the comb hanging down on one side", M. lerā "curved (said of norns of animals)". So far as I know, variants with initial r or d do not exist; so we are led to assume a root la-da. But the Vedic language tends to eliminate in the Proto-Munda loan-words such sounds as are considered characteristic of Prakrit and the vulgar forms of speech, cf. Ved. udumbára- for udumbara-, daṇdá- for *daṇda-. In the same way *a-lāḍa- (and *a-lāḍiya-: S. ladea?) may have been changed into arāḍa-. If so, Pali alāra- must be due to metathesis (although Lüders, Philologia Indica 560, for reasons which he did not mention, held this to be the older form of the word).

If, however, arāda- is a Proto-Munda word we may further connect with it arāṭakt-, which occurs in Ath. S. 4, 37, 6

ajaśrngy àrāṭaki tikṣṇaśṛngi vy `ṛṣatu.

The Paippalāda variant ajasṛṅgi rāṭakāṁ, ajasṣṛṅgi rāṭaky (cf. Le Roy Carr Barret, JAOS 48, p. 42) is obviously worthless. Whitney's translation "let the goat-horned arāṭakī, the sharp-horned, push out" is based on the supposition that arāṭakī is a specific name of a herb, whereas the commentator takes it as an epithet (though from his nonsensical interpretation it is evident that he did not know its meaning).

In the later language ajaśṛṅgī is the name of the Odina pinnata. Since in

v. 2 of our hymn it occurs in the vocative in an address to the plant, we must assume that it had already become a specific name as early as the Vedic period. Accordingly arāṭakī is probably to be taken as an adjectival epithet (see Add.). Now the ajaśrngi is also called visānin-, viṣānikā-, mesastrigi- on account of the shape of the fruit (see Whitney's and Lanman's notes on v. 2). For the same reason it is obviously called here "the curved one" or "the curved horn". An etymological connexion with arāla- had already been supposed by BR. The word is of particular interest in that it shows the unvoicing of medial sonants to date back to the Samhita-period. A different explanation has been given by Tarapada Chowdhury, op. c., p. 36 ff., who derives arāta- from ará- "spokes", ala-"sting of the scorpion (or, of an insect in general)", ārā- "awl", etc., all denoting something pointed. But derivation from Aryan words by means of -ta- (which has hardly been cerebralized through the influence of the neighbouring r- sound) is only met with in later periods of the language. As for ala- (ada-!) see Lüders, Philologia Indica 430; árā- is generally connected with Old High German âla and has r from IE. l.

2. argada- "obstacle; class. bolt, bar".

Since S'at. Br. sắrgaḍa- (Kāṇva rec. sắrgala-), see Wackernagel, Altind. Gramm. I, 221 f. (who writes argaḍá-). The connexion with Old Engl. reced, Old Saxon rakud "house, palace, temple" (see Uhlenbeck, Walde-Pokorny I, 81) is unacceptable both on account of the semantic difference and because of the suffix -ḍa- which we should then have to assume for a Vedic word. This also excludes a connexion with Ved. rkṣálā- (rcchárā-, acchárā-, acchálā-, atsárā-) "fetter". The original meaning of the word (which, in the later language, denotes the wooden pin of a door, cf. S'āṅkh. Ār. 2, 16 argaleṣīke "the pin and bar of the door of a cow-pen") must have been "hindrance, impediment", cf. Beng. āgal "restraint" (: āgaṛ "hurdle"). Skr. lex. gaḍa-, gaṇḍaka- "obstacle" (antarāyaḥ), and buddh. Skr. nirgaḍa- "without impediment, blameless" argue in favour of an analysis ar + gaḍa-. Cf. Pa. ghaṭīyati "is obstructed" (ghaṭikā- "a bolt"? See Kern, Toevoegselen, 1, 130; otherwise PTS Dict.).

The root gad- is actually met with in the following Santali words: gar garao "to detain, restrain, beset, keep", gud gudau "to beset, detain, restrain", gur gur "to restrain, deprive of freedom", perhaps also gand "a cross-ridge", gand gand "across, transversely", gande "across, athwart, transverse, at right angles" (cf. Ho gāndi "obstruction, obstacle"), ganade, ganade "the cross-bars of a bedstead, the two short bars of a door-frame, etc. "(derivative from *gade?), akot "hindrance, obstruction, obstacle, to check, stop, detain, etc." (possibly influenced by atok, id., from da-ka). Cf. So. inad "to close (door)"?

The assumption of a root word *gaḍa is supported by Nep. ghāro "bar, rod, pole, cross-beam, ridge-pole", tagāro, taghāro "bar, bolt" (wrongly

Turner s.v.), perhaps also Beng. tagad "to bind the feet", which has been Sanskritized as tryankata-, tryangata-, m. "Ein Schulterjoch mit drei von jedem Ende herabhängenden Stricken zum Tragen von Lasten" (see Chatterji 887). Grierson, Bihar Peasant Life § 1250, mentions (besides āgal, āgar, agrī, the general names for a wooden bar used for fastening the door) the following local terms: gharkā "a kind of bolt" (in South Munger), hurkā "the bolt of the lock", and arkhar "the spar that supports the screen or hurdle used for a door" (South-East Bihar). The first of these words apparently presupposes *gaṛ-ak < *gaḍ-ak, cf. Beng. khiṛkī "window, back-door" (< Pkt. khadakkī-. Bloch 319, Chatterji 498). As for the second word (cf. Hi. huruk, hurkā "bar or bolt of a door", Beng. hurkā, id., Sanskritized hudukka-, m., id., in the S'abdaratnāvalî), it is clearly a Munda loanword, as S. hurka "a wooden bar for a door, a shackle, gyve (on the leg of buffaloes), to bar, to shut with a bar" is a derivative from S. hura = hari "to shackle, gyve, to fetter, put in the stocks, chain (the feet), detain". It presupposes an original *gud-uk, parallel to *gad-ak. In S. hurkar "the wooden bar or bolt (of a door), to shut with a bar" two dialectal variants of the same word are combined to form an "echo-word" (which is a very common phenomenon in Santali), unless hurka has been extended with -r, and has then been interpreted as an echo-word. S. karhar "a kind of gate with movable bars (at the entrance to cattle-sheds)" may be explained in the same way. The third word, viz. arkhar "the spar that supports the door inside", may be identified with S. argara "a cattle-pound, prison, difficulty" (whence Beng. ārgarā "stables", which Chatterji 497 records among words of prob. deśi origin) on the supposition that the original meaning is "vraja-". Probably ar- stands for *haṛ-<kaṛ-<gaṛ-<(cf. s.v. ākula->); it thus coincides with the Dravidian root ad-, ar- "to obstruct" (cf. Hi. ar "obstruction, bar", ārnā "to stop", etc., Pashto ăr "hindrance", see Turner, BSOS 5, 123, Chatterji 497, Burrow, Transactions Philol. Soc. 1945, 79 f.).

It might seem plausible to regard Skr. argaḍa- as an earlier reflex of the same Proto-Munda word, which now has become argaṇa in Munda, and has again been borrowed into Aryan as aṛkhaṇ and āṛgaṇā. There is however another possibility, viz. that ar- is the well-known variant of the prefix a- (cf. kar- : ka-, śar- : śa-, etc.), which is found, e.g., in arbuda-(see s.v. piccha-). Our materials do not allow us to decide this question. Note also Skr. lex. varkuṭa-, m. "pin, bolt", which Wilson quotes from a lexic. work.

In conclusion we may observe that S. huṛka denotes both a bar and a gyve. Hence nigaḍa-, n. "chain for the feet, fetter", cannot well be separated from argaḍa-. On the other hand, it would seem to belong to the affiliation of śṛṅkhalā- "chain, fetter", which suggests an original meaning "to bind" rather than "to detain, bar, gyve". If these two word-families

are ultimately identical, Toda tagārs "chain" would be interesting on account of Nep. tagāro "bolt". See s.v. śṛṅkhalā- 1).

3. $\bar{a} k u l a$ "confounded, confused, agitated, anxious, overburdened with, full of".

This word is still unexplained. The Pet. Dict. tentatively suggested some connexion with kirati, but Hindi kulkulī "restlessness" seems rather to point to Munda origin. On the other hand, Tam. mankulam "cloudiness, murkiness; perturbation, confusion of mind" looks like a Munda loan-word which is derived from the same root 2). The question arises, then, whether Pkt. maülī "disturbance or upsetting of the heart" (hṛdayarasocchalanam, Deśīn. 6, 115) is derived from *makulī (with the same prefix as is contained in the Tamil word). In addition, Skr. kalila- "covered with, full of; confusion, chaos" may be connected with these words.

The common meaning of all these words is "confusion, agitation" which reminds us of So. kalkál "difficult, agitated". In Santali there are a great many words derived from gad (gal, kal, hal, al) which convey the sense "confused, disorderly", cf. gad bad "confusion, disorder, confused, mixed". gadbadao "to put into disorder or confusion, make a mess of", gadbe sadbe "in disorder, to muddle, confuse", god budi, god bod "to confuse, come to no conclusion", gadoe sadoe "mixed, mingled, confused, to mix", gadui sadui, id., gul gulau "to make a disturbance, commotion, confusion", gul gul "disturbed, hurly-burly", gul mal "noise, tumult, uproar, disturbance. confusion", gul malao "to disturb, disarrange", galoc' saloc', galuc' saluc', galui salui "confusedly", kalok' batok' "restlessly, uneasily, to be restless". lar kharao "to be in a hurry, restless, eager", hal bal "restless, turbulent, troublesome, meddlesome", halo balo, id. 3), hul mal "disturbance, riot, uproar, tumult, to make do.", ulmal "confusedly, to perplex, confuse", ulmalao "to disorder, confuse, stir up, bring into commotion", alat' olot' "bewildered, abashed, to confuse, bewilder", alat' bakat' "to confuse, bewilder, nonplus", etc. 4).

Several of the words quoted above are "echo-words" composed of derivatives from gad and bad (bal, mal). They have also been adopted

¹⁾ Note Nep. pagāro "rope, tether", which Turner derives from *pragrahaḍa-. The Munda evidence now available however hardly supports its derivation from ga-ḍa (but cf. Beng. $t\tilde{a}gad$ "to bind the feet"). Its etymology must be left undecided.

²⁾ Not certain, cf. Tam. mankul "cloud" and maiyā- "to become dim, to be perplexed".

³⁾ In kalo balo "to become loquacious, to get tipsy, talk incoherently" there is contamination with gal "talkative". M. ukul-bukul "to be uneasy and anxious" is ambiguous, cf. S. ikil sikil, ikir sikir, ikit' sikit' "restless, troublesome" (root ak- or blending? See below). S. bokol bokol, bohol bohol, bekel bekel, bikol bokol "muddy, turbid" are prob. unrelated (cf. Pkt. bahalam). Is the meaning of Skr. vikala- "depressed, sad, unwell", Hi. bikal "restless, uneasy, troubled" due to contamination with a Proto-Munda word?

⁴⁾ Cf. Pkt. halabola-, m. "confused noise" (kalakalah, Deśīn. 8, 64).

by some NIA. languages, cf. Nep. alamalla "perplexed, troubled, perplexity, trouble", almal "delay, confusion, perplexity", almalinu "to be confused, puzzled, detained", ulmāl "confusion, chaos", hulhāl, hul, hullar "riot, disturbance", gulmāl, golmāl, gulmul "tumult, uproar", Hi. halbal "tumult, commotion, confusion" (also halphal), harbarī, "id., uproar, mutiny", harbarānā "to be agitated", khalbal "confusion, commotion, agitation, tumult", kharb(h)ar, kharbar, id., khalbalānā (khadbadānā) "to boil, bubble, be agitated, be in a state of commotion" (see Bloch 317). Cf. S. gar bar = gad bad "confusion, disorder, etc.". More complicated is the origin of Hi. ghabrānā "to be confused, perplexed, agitated", ghābar, ghābrā "confused" (by the side of garbar "confusion, disorder, tumult", garbarānā "to be confused"). Turner (s.v. ghabrāunu) derives them from *ghabb(h)ara-. This may represent Skr. *gharbhara- (from Proto-Munda garbar), but perhaps we have to do with a contamination of roots, which is peculiar to Munda (see s.vv. kubja- and tumula-), cf. S. gabad, gabdhao "to be mixed up with", gabar "mixed, impure", from gab- (gabuc' sabuc' "to mix up, make a mess of, confuse", gabao "to make water muddy") but influenced by gadbad 5).

In some of the derivatives from gad- the sense of "confusion" has developed to that of "tumult, uproar". The question thus arises whether Skr. kalaha- "strife, quarrel" belongs to this group of words. The Tamil Lexicon gives for kalakam the following meanings: "strife, quarrel, wrangle, altercation, uproar, tumult, insurrection, revolt, rebellion, etc.". In an early publication (in ZII 8, 241) I have connected it with Greek κόλαφος "box on the ear", and W. Schulze, KZ. 45, 288, n. 1, similarly derived it, with some reserve, from *kaladha- and compared Latvian kilda. A more profound study of non-Aryan languages drew my attention to other possible explanations. It is tempting to compare Tam. kala- "to mix, blend, compound", kalakku- "to confuse, nonplus", kalanku- "to be stirred up, agitated, to be confused", kalatai "confusion, tumult, turmoil", kallal, kalal "disturbance, confusion, tumult", Tel. kalangu- "to be in trouble, grief, disorder or confusion", kalancu- "to put in agitation, make turbid, embarrass", kalata "trouble, perplexity, dispute, squabble", kalaka "trouble, perturbation, foulness, sin", kalacu- "to trouble, disconcert, disorder", etc. Their native Dravidian character is, it seems, beyond doubt 6). If however

⁵⁾ Among the meanings of Hi. bigāṛ we find "disorder, disarrangement, disturbance, confusion, rebellion, revolt, mutiny" and for bigaṛnā Platts gives also "to get out of order, be disordered, tossed, disarranged, to quarrel, rebel, revolt". Cf. Hi. agaṛ bagaṛ "confusion, medley, mess, mixed, confused", igar digar "disordered, disarranged, spoiled, injured" (: S. agaṛ bagaṛ, agaṛ bigaṛ, agar digaṛ). The question arises whether bigaṛ-, bagaṛ is also a derivative from gaḍ-; if so, S. sigic' bigic' "disordered, disarranged" must be a secondary alteration of sigiṛ bigir "in confusion" (as is often the case with jingles). Contamination of form and meaning plays an important part in such expressions.

⁶⁾ Tel. galibili "disorder, confusion" (gal + bal!) and galagincu- "to stir, mix, mingle, confuse" must however be Munda loanwords as the Dravidian root seems to have an ancient k (Kann. kalasu. Tulu kala etc.).

Skr. kalaha- were a Dravidian loan, the h would point to Kannada, where intervocalic -pp- has become h (via -p-) about 1000 A.D. (the earliest instances of h occurring in 1004, see A. N. Narasimhia, BSOS 8, 674). Since kalahin- is attested as early as the Chand. Upan. and the Grhya-Sūtras (Āśv. GS., Jaim. GS.) this explanation is apparently excluded. (After this had been written I found that Burrow, BSOAS 11, 133, n. 1, actually derives kalaha- from this Dravidian root, without explaining, however, the origin of Skr. h). For the same reason -ha- cannot be explained as a Prakritism 7). On the other hand, -ha- is a very common suffix in Santali, and most of the Sanskrit and Prakrit words which contain this formative element are likely to be Proto-Munda loanwords (cf. ladaha-). Hence, like Mar. kal, Nep. kal "quarrel", kalaha- is probably to be connected with kalila- and ākula-. Note S. gondogol "tumult, uproar, hubbub, quarrel" (Beng. id.), which is an "echo-word" composed of two different derivatives from ga-da (as is very often the case in Santali), and Kh. kole "to quarrel". On the other hand, Pkt. halahala-, n. "tumult, curiosity" (tumulah kautukam ca, Deśīn. 8, 74) and Mar. halhāl "restlessness" (Bloch 428) are no "echo-words" in the proper sense of the word, as the two components are not (or only slightly) different. Like Skr. kolāhala-, m. "confused cry, uproar" (< Proto-Munda *kola hala), they corroborate our explanation of kalaha-.

4. $\bar{a} \not t \circ p \ a \rightarrow m$. "puffing up, pride, self-conceit".

1. The meaning "puffing up, flatulency" since Mhbh., Suśr. (cf. phaṭāṭopa- Pañcat.); the meaning "pride" since Mṛcch. The primary sense is "swelling" ("Aufbauschung, Anschwellung", Pet. Dict.), cf. Nep. tuppinu "to be puffed up with pride" (contaminated with tuppinu "to grow to a top", tuppo "top"). Since Hi. tipor "vaunting, boasting", tippas "conceit, pride, haughtiness, arrogance" (Nep. tipor "pride, conceit, self-glorification", etc.) point to a non-Aryan origin, it is possible that śopha-, m. "tumor, sore" (Suśr., Kathās.) should be separated from śotha-, m. "swelling, tumefaction" (Suśr., Caraka), with which it is generally connected on the supposition of a common derivation from śū- "to be swollen".

 \bar{A} topa-, whose initial vowel may be a Proto-Munda prefix (cf. a-nganā-, \bar{a} -ndolayati), is a derivative from the root da-wa or da-ba "globular, thick, swollen", derivatives of which are enumerated s.vv. udumbára-, dimb(h)a-, and $d\bar{a}dima$ -. Cf. especially S. tub tubu "distended (stomach), visibly pregnant", dum dum "having a swollen, protruding stomach", dumka "roundish" and dhomok "haughtiness, arrogance, conceit, pride". This explanation is supported by such variants as Hi. dimbh "pride, vanity, affectation", Tam. tempu "physical strength, daring, bravery, arrogance,

⁷⁾ For the few Pkt. instances (puttaha-, etc.) see Pischel § 206 and A. Master, BSOAS 11, 299.

pride, energy" 8) (: timili, timmali "a stout, strong woman"), tampam, itampam "pomposity, ostentation", Kann. dabbu, damb(h)a, dambha, id. (: dubba "a man with a large belly, a very stout man", doppa "thickness", dappa "thickness, stoutness, coarseness"). Hi. dambh "deceit, trickery feigning, hypocrisy, pride, haughtiness, arrogance" (cf. dambhī "deceitful, hypocritical, proud, arrogant", Nep. dambhī "proud") seems accordingly to be a contamination of Skr. dambha- "deceit, fraud, hypocrisy" and a Proto-Munda word. A confirmation of this conclusion is provided by Mar. jambha = Tam. jampam "affectation, overwheening pride, pomp, ostentation" (Tel. jambhamu, Kann. jamba, jambha) and, on the other hand, by Hi. tip-tap "ornament, decoration, pomp, show, ostentation, splendour, magnificence", tīm-tām "dress, show, ostentation" (: thamṛā "thick, corpulent", dhappū "bulky, fat, corpulent", Nep. dhabbu, etc.), dhūm "(noise, bustle, tumult), display, parade, pomp, ado", dhūm-dhām, id., Nep. tham-tham "strutting, arrogance, display, smartness of appearance", ?tām-tum "display, ostentation, appearances", Mar. tām-tūm "display", tam "proud swelling", tamne "to bluster", Beng. tam "pride", Nep. tamak "conceit, pride, haughtiness" (cf. S. dhomok!). In view of these words Pkt. madapphara-, m. "pride" (garvah, Deŝīn. 6, 120) and malampia- "proud, haughty" (garvī, Deśīn. 6, 121) may possibly be derived from the same root (prefix ma-?). Cf. also Skr. lex. heramba- "ein auf seinen Heldenmut pochender Mann" (Hemac., Med.; for prefix he- see p. 66) and Hi. hamew "vanity, arrogance, pride" (with h < dh?).

2. A serious difficulty arises from the fact that many words are contaminations of two or more different words. Skr. ādambara-, m. is particularly difficult for this reason. It is partly a synonym of atopa-, but it has been fused (like Hi. dhūm) with a word meaning "noise" (hence the inexact rendering "lärmvolles Benehmen, Wortschwall", etc. in the Pet. Dict.). The commentaries regard both words as synonymous, e.g., Yasastil. 1, 175, 1 kalaraṇatkāñcīlayāḍambaram (: comm. āṭopaḥ), Varadāmbikāparinayacampū 52, 8, where the modern comm. renders āţopah by āḍambarah. Cf. Tam, āṭamparam "pomp and show, ostentation", Tel. ādambaramu "pomp, grandeur, vain display, abortive arrogance", Kann. āḍambara "ostentation, display, pomp, pride", Hi. āḍambar "noise and bustle, arrogance, pride, ostentation", etc. A similar meaning is sometimes found in the Skr. literature, e.g. Bhāminī-Vilāsa 1, 3 Dhātah kim nu vidhau vidhātum ucito dhārādharādambarah "en un tel moment convient-il, ô Créateur! que le nuage déploie tout cet appareil contre la lune" (Bergaigne), 1, 113 nirguno sobhate naiva vipulādambaro 'pi nā "Quand

⁸⁾ These meanings recall Skr. darpa-, m. "extravagance, petulance, temerity, arrogance" (and, no doubt, Kandarpa-, m. "love, god of love"). It cannot yet be decided whether these words represent *da-r-ba (cf. carpaṭa-, Pashto drabəl, from *dα-wα "to press down", p. 58 and cf. Turner s.v. dapkāunu).

il est sans vertus, l'homme ne brille pas (d'un éclat solide), quelque appareil pompeux qu'il déploie'; Gopālakeli 53, 4—5

nirvisṭā(?)girinirjharā ravisarit tīrāvaṭāḍambarā 9) dhvāntakrāntatamālakānanabhuvo jhillīravālīśayāḥ,

and 60, 5 pītāmbarāḍambaraḥ, which Caland leaves unexplained in the index (on p. 16 he tentatively translates "in geel gewaad gekleed (?)"). Cf. the similar expression pravilasatpītāmśuka- (65, 6), and e.g. bhūṣitam pītavāsasā Brahmavaiv. Pur. 4, 20, 33. More than a century ago, indeed, Troyer, in his edition of the Rājataraṅgiṇī, vol. I, p. 419 (1840), added the meaning "vêtement, ornement" to those provided by Wilson and translated nirāḍambarasundara- as "beau sans ornement" (Rājat. 2, 125). His authorities were the pandits of Calcutta. The Pet. Dict. however quotes this passage in illustration of the meaning "lärmvolles Benehmen, Posaunen" (vol. V, 1095). However that may be, āḍambara- and ḍambara- are more than once combined with words for "dress", e.g. Kathās. 71, 130 sākṣasūtrājinajaṭaṁ tāpasīveṣaḍambaraṁ (vidhāya ... sā), which rather means "imposing dress" than "Gewirre, Menge, Masse" (Pet. Dict. V, 1456); Vikramāṅkadevac. 3, 76 luṇṭākaluptanikhalāmbaraḍambarāṇām ... purāṅganānām (of Kāñcī, after the plundering).

With Harsacar, 98, 1, 4 from the bottom (ed. Bombay 1897) priyakathā eva subhagāḥ karṇālamkārā, āḍambaraḥ kuṇḍalādiḥ "the talk of their dear ones forms happy ear-ornaments; rings and the like are but affectation" (Cowell-Thomas) may be compared Brhatkathāmañjarī 18, 14 phalam rājyataror etac, chesam ādambaram śriyah. Thomas, JRAS 1899, 509, suggests a meaning "anointing of body" for Harsac. 229, 15, and records dambara- "bombastic tone" (śl. 17). A similar contamination of the sense "bombast, pomp" and "dull sound" is suggested by Somadevasūri's own commentary on Yasastil. I, 98, 1 madhukarakutumbinīnikurambādambara-, viz. āḍambareṇa: āṭopatayā śabdagarjitayā vā. But the implication of "sound" is absent in, e.g., Bhāratamañj. 13, 962 ahimsā paramo dharmah, kratuś cādravyadambarah (display of unsuitable things), 3, 227 adravyādambaro yajnas, 3, 610 draviņādambarāvāpyān 10) jnātvā pāpamayān kratūn / sarvayajñaphalam tīrtham dhīmān ko vā na sevate? The meaning "splendour" 11) is found, e.g., Varadāmbikāpariņaya 28, 6—7 -govṛndavadana - nisyandamāna - romantha - bindusandoha - tārakitāmbarādambaravidambana-catura-śādvaladeśān. The Vikramānkadevacarita has as a rule

⁹) Caland mistook d for an avagraha owing to their close resemblance in the Leyden MS. and read ravisarinn rāvatāmbarā, which is against the metre. Since nn and tt are equally possible, I take it to mean "the water of the Yamunā (ravisarit = tapanasutā, tapanaduhitā) is now so low (on account of the heat) as to show the holes of the banks". For nirvistā the MS. reads nirddistā.

¹⁰) This is obviously the correct reading for avapya of the Kavyamala edition.

¹¹) See further Pet. Dict. VII, 1747, Böhtl. I, 283 ("Pracht, Schönheit").

the variant dambara-, e.g., 1, 47 prakoṣṭhapṛṣṭhasphurad-indranīlaratnāvalī-kaṅkaṇaḍambareṇa, 2, 71 mahāgṛhāṇāṁ pratibimbaḍambaraiḥ praṇamyamāneva, 17, 21 vitānaratnapratibimbaḍambarair vibhānti yatprāṅgaṇasīmni lāsikāḥ. In 13, 78 nitambaḍambara- the meaning may be
somewhat similar to that of āṭopa- (the commentaries often render by
vistāraḥ). I do not hazard to decide whether (ā)ḍambara- "prapañcaḥ" is
identical with this word. See Pet. Dict. V, 1456 ("Gewirre, Menge, Masse")
and cf. Rāghavapāṇḍav. 12, 17; 4, 37, and 8, 54 sasaṁbhramocchalitapayodhiḍambara- (the comm. renders everywhere "prapañcaḥ") 12),
Vikram. 9, 126 ucchalacchīkaraḍambara-, 12, 50 pradarśayantīva tuṣāravarṣaṁ visāriṇā śīkaraḍambareṇa, 13, 13 grīṣmamahoṣmaḍambare dine,
Haracaritacintāmaṇi 9, 239 sarvāṅganetragāḍhāsraḍambaram.

The wide range of meanings of adambara- "pomp, ostentation" and its contamination with homonyms renders the interpretation of several passages difficult. Thus, when S'aktideva, emerging from the lake, does not see the town of the Vidhyādharas, he says aho kim etad āścaryamāyāḍambarajṛmbhitam (Kathās. 26, 89). Böhtlingk first took it to mean "Gewirre" (1868) but later he changed this into "Riesenmässigkeit, das Non-plus ultra, die Krone von' (1879). A somewhat similar use of the word occurs in 107, 5 devāvirbhāvadambaram krtvā, where I would suggest to translate "the miracle of the manifestation of the god" 13). The same acceptation seems possible in the first passage 14). This rendering, which, for the rest, does not differ very much from Böhtlingk's, is supported by Skr. dāmara- "extraordinary, amazing; m. amazement, admiration" (Mālatīm., Gītagov.), lex. damaru- "amazement, surprise" (Trik.), and by Hi. ācambā, ācambhā "wonder, marvel, astonishment, amazement" (Nep. acamba, acambha, acamma, id., etc.), which obviously represents a dialectal variant of damb- and confirms our supposition that a- is a Proto-Munda prefix. Skr. camatkāra-, m. "astonishment, amazement, surprise, wonder" (and, no doubt, "embellishment, ornament", cf. Gopālakelicandrikā 44, 27.29; 48, 21) 15) bears the same relation to ācambā as dāmara- does

¹²⁾ The exact meaning in the last passage, however is rather "noise", cf. Vikram. 15, 36 nikaṭasthitameghaḍambarair suracāpair iva.

The translation of Tawney-Penzer, vol. VIII, p. 43 has "the delusion of the appearance of the god". Speyer. Studies about the Kathāsaritsāgara 80, quotes this passage in support of the reading dambara- in 100, 41 jaya nijatāndavadambaramardabharanyancitena bhuvanena praṇamyamāna ... gajavadana, but the context rather points to a different word ("drone, din"; otherwise Tawney-Penzer VII, 131: "the crushing weight of thy tumultuous dance"). Different, again, is Bhāratamañj. 3, 312 Valatkailāsasubhrāya tāṇdavāḍambarasprše, where ādambara- denotes the damaru (see Gopinath Rao, Elements of Hindu Iconography II, 1, 137, 193, etc.); as a matter of fact, the āḍambara- is according to Nīlakantha (ad Mhbh. 7, 82, 4) a kṣudrapaṭahaħ. See further s.v. dundubhi-.

[&]quot;Alas! what is this great display of marvellous delusion?" (Tawney-Penzer II, 224).

¹⁵⁾ Cf. Tam. camatkāram "cleverness, skill in speaking, poetic charm, aspect, manifestation", Tel. camatkāramu "skill, adroitness, ingenuity, wit, a prank or manoeuvre, curiosity, rarity, refinement", Kann. camatkāra "astonishment, surprise, a show, spectacle a wonder, cleverness, skilfulness, quickness".

to dambara- (Proto-Munda nasalization, resp. prenasalization). Now it is interesting to note that in Hindi the Skr. loanword means, not only "surprise, astonishment, amazement", but also "show, pomp, grandeur, splendour" (cf. Platts s.v. camatkār); likewise Nep. camatkār means "brilliance, splendour, grandeur". This fact, though rather baffling, tends to show that all these words are derived from the same root (cf. Greek $\"aya\mu au : \"ayar : \mu\'eyas?$).

3. The original sense of Skr. damara-, m. "riot, tumult" (Var. BS.), dimba-, "affray, tumult, danger, distress" (Mhbh. Manu) is rather "confusion" than "blow". The lexicographers render dimba- by viplavaḥ. I presume, therefore, that it is to be separated from Nep. dimbā, dimmā "blow, slap" (Turner s.v.), which belongs to the affiliation of Skr. capeṭā-, and that it is connected with the first component of S. damadol "confusion, disorder, uproar, disturbance, tumult; restless, confused, distressed". Beng. dāmādol "tumult" is according to Chatterji 495 of deśī origin, and the same may be true of Hi. dāmādol, dãwādol "unsettled, uneasy, restless, distressed (in mind)". Its type of formation strongly suggests a Munda origin (though the Santali word may possibly be a reborrowing) 16). The meaning of Nep. dāmā-dol, viz. "shaky, not firm, unsteady, unsettled", may have been influenced (through popular etymology) by bhuī-dol "earth-quake". For the true cognates of -dol, see s.v. tumula-.

5. ā p ī d a -, m. "crown, garland".

Since Mhbh., Rām. According to Cappeller (Skr. Engl. Dict. s.v.) "lit. head-presser", which probably is the common view. As a matter of fact, āpīda- is once used in the sense of "pressure, squeeze" instead of āpīdana-(galāpīḍa-, Suśr.) 17). But the other word was employed in a wider sense, which cannot easily be connected with pīd- "to press". Pischel § 122 gives its meaning as "Kranze, Haarflechte", which is confirmed by Pkt. āmeļa-, āmela-, āmoḍa-, moḍa-, m. 18) "mass of twisted hair" (jūṭaḥ, Deśīn. 1, 62; 6, 117). The commentary on 1, 62, it is true, only identifies āmela- "headornament" (śekharah) with Skr. āpīda-, in contradistinction to the word with the meaning "jūṭaḥ", which it regards as a deśī-word. As for āmeļa-, Pischel § 122 traces its derivation from *āpīdya- (> *āpidda-, *āpeḍḍa-, *āpeḍa-), cf. Geiger § 11. Hemacandra records an interesting variant aveda-, which recurs in Pa. avela- "1) turning round, swinging, diffusion, radiation, protuberance (with reference to the rays of the Buddha). 2) a garland or other ornament slung round and worn over the head". Rhys Davids and Stede derive this from a-vest- (with which

¹⁶⁾ See s.v. tumula-.

¹⁷⁾ Mhbh. 3, 64, 102 B. (= Nala 12, 102 in the longer recension) taruśrestham aśokam ... pallavāpīditam means no doubt "crowned with twigs" (pallavair bhūṣitam Nīl.). Thus rightly Böhtlingk (Caland, Sāvitrī und Nala 124: "dicht bedeckt", from pīd-).

¹⁸⁾ See Pischel § 238.

 $\bar{a}mela$ - is likewise connected). The Pali word certainly presents some difficulties as it is possible that in its first sense it belongs to $\bar{a}velita$ "turned round, wound, curved" (root vel-, vell-). However that may be, there can be no doubt that in its second meaning it is identical with Pkt $\bar{a}veda$ -, $\bar{a}mela$ - and Skr. $\bar{a}p\bar{\imath}da$ -.

If, then, these words denote both a garland and a braid of hair, their original meaning is likely to have been "plaiting". This reminds of Hi. $b\tilde{i}d\bar{i}$ "the hair twisted or plaited behind, braided hair", which must be a Munda word on account of its dialectal variants mêdī, mīdī, id. (with nasalization of b). Cf. also H₁. $b_1^2 d_{\bar{a}}$ "bundle, roll, twist of grass", $b_1^2 d_{\bar{a}}$ birā "big bundle, load", benṭā "a turban" = Hi. Nep. pheṭā, id. The Munda origin of these words cannot, indeed, be questioned, cf. S. bhind "a large bundle or burden (tied)", M. bira "a bundle of crop", bed" "turban, to wear a turban, to tie on the head" (bēnēd" "head-dress, pagri, turban") 19), beorā "to tie paddy seedlings together, to tie up the hair", Ho birā "a big bundle of paddy", bență "a pagri or turban". For a full account of this root and its many derivatives see s. vv. meṇḍha- and kabarī-. Skr. āpīḍa- must accordingly contain a Proto-Munda prefix (see, e.g., āṭopa-), as it is obviously connected with this word-family. With Pkt. (ā) moḍa- cf. Pkt. murumunda-, id. (Deśīn. 6, 117), phuntā- "keśabandhah" (6, 84) and p. 110 f.

If this be correct, the intricate explanation of the e in Pkt $\bar{a}mela$, etc. (Pischel § 122) is unnecessary as $\bar{a}veda$, $\bar{a}vela$ may be taken to be fully identical with $\bar{a}p\bar{\imath}da$, and the m of $\bar{a}mela$ is a similar instance of Proto-Munda nasalization as, e.g., Hi. dial. $m\bar{e}d\bar{\imath}$, $m\bar{\imath}d\bar{\imath}=b\bar{\imath}d\bar{\imath}$ "braided hair" or Skr. mendha=bheda "ram". Pischel § 248, it is true, assumes a dialectal change of pa (via va) to ma: "Der Übergang, der fast ganz auf AMg. beschränkt ist, erklärt sich aus dem Wechsel von ma und va". Pischel's interpretation of the facts can however be shown to be incorrect. His materials clearly comprise two different phenomena, viz.

- 1) Nasalization of p > b, v) through a preceding n, e.g. Skr. nipadyate, nipanna-> numajjai, numaṇṇa-; ājṇāpanī > āṇamaṇī; kuṇapa-> kuṇima-; $n\bar{\imath}$ pa-> $n\bar{\imath}$ ma-; Pa. manāpa-> maṇāma-; $van\bar{\imath}$ paka > $van\bar{\imath}$ maga-, etc.; in svapna-> siviṇa-, simiṇa- the n follows after the v.
- 2) Austro-Asiatic nasalization in āmeļa-, ņimeļa- (see p. 146), cimiḍha- (p. 57), and probably also in viḍima- (= viṭapa-).
 - 6. udumbára-, m., "ficus glomerata", m.n. "its fruit".

In the last sense it is also accented udúmbara- (S'at. Br.). The word is in common use since the Brāhmaṇas. In the later literature it is written uḍumbara-. Böhtlingk considers this an incorrect spelling, whereas Wackernagel, Altind. Gramm. I, 173, reckons uḍumbara- among the instances where d has been cerebralized "without any apparent cause" (likewise

¹⁹⁾ For the final checked d' (t') representing a cerebral, see p. 33 f.

Bloch, Langue marathe 125). The same spelling is however found in Vedic texts, cf. Kāṭh. S. 21, 8 (p. 47, 13) audumbarīr bhavanti, ūrg vā udumbara, ūrjam evāsmā apidadhāti. Ancient and modern attempts to explain udumbára- as an IE. word have led to no result, cf. S'at. Br. 7, 4, 1, 39; 7, 5, 1, 22; H. Petersson, IF 34, 229 f. (cf. J. Charpentier, IF 35, 255). See also Bloch 298. The word and the various historical problems connected with it have been discussed at length in Przyluski's luminous article entitled "Un ancien peuple du Penjab: les Udumbara" (Journ. As. 1926, I, p. 1 ff.). He refers to the fact that the fruits of the ficus glomerata, though resembling the figs known in Europe, are ovoid and contain a great quantity of seeds. In both respects they accordingly resemble the gourd (Skr. tumba-, tumbā-, tumbi-, tumbuka- "lagenaria vulgaris"), with which Przyluski further connects godumba- "water-melon, Cucumis maderaspatanus, colocynth" (only in lexicographical works). But the word-family of Skr. alābū-, lābū- and several Indonesian words, which the learned author also connects with them, are not likely to have anything to do with them 20). Instead of such vague speculations it is possible to give a more precise explanation of udumbara- and its cognates. The common characteristic of the fig, the gourd, and the water-melon denoted by ditumb- must either have been "ovoid, round" or "full of seeds". Now, modern Kherwari has many derivatives from a root da-ba "swollen, roundish, etc.", e.g., S. dub dubia "full, swollen (stomach), tight, stuffed", dub dubi "to impregnate, become enceinte", dum "to be pregnant", dumka "roundish, oblong, oval (fruit)", dumkuc' "small 21) and oval (fruit, tubers)", bin' dimbu "cucumis trigonis", etc., M. dhumā (dhumi, f.) "fat and dwarf" 21), dhumṛā (dhumṛi, f.) "stout, fat", dhomsol "fat", dhimsi "a big-bellied woman", dheb dhebe, dhebrā "big-bellied". With regard to the variety of the root-vocalism it is interesting to note that some Sanskrit lexicographical works write godimbafor godumba- (thus Hemac. and Med.); see also s.v. dimb(h)a-22).

Przyluski has drawn attention to various myths in the Aryan tradition which testify to a popular belief about the fertility of the colocynth (lagenaria vulgaris, Skr. tumba-, alābu-), the pumpkin, and the melon. Thus Sumati, the second wife of king Sagara of Ayodhyā. gave birth to a gherkin from which 60.000 sons were born: garbha(m) tumbam vyajāyata / ṣaṣṭiḥ putrasahasrāṇi tumbabhedād viniḥṣṛtāḥ, Rām. 1, 38 (39), 17; garbhālābum vyajāyata Mhbh. 3, 106, 19 Bomb. In the latter version the sons are born from the seeds that had to be taken from the fruit. The name of Sagara's ancestor, viz. Ikṣvāku- "gherkin, colocynth", is probably

²⁰) The question whether *labu is ultimately an Austric variant of *dubu cannot yet be decided. Cf. however Pkt. $kalav\bar{u}$ - "a vessel made out of a gourd" ($tumb\bar{\imath}p\bar{a}tram$ Deś $\bar{\imath}$ n. 2, 12).

²¹) Contamination with da-wa "small", cf., e.g., M. thepā "short in stature, dwarf" (Skr. śāva- "young of animal").

²²) A variant of *udumbara*- without prefix *u*- is perhaps Beng. *dumur*. The evidence for aphaeresis is very slight, see Chatterji 313.

due to the same belief about a colocynth being the origin of the dynasty. Przyluski's supposition that this idea has been adopted from the Proto-Munda population is quite plausible and is now supported by the etymology, which suggests that the Aboriginals associated these fruits, on account of their form, with a pregnant woman; cf. S. dum "to be pregnant": dumka "roundish, oblong, oval". The roundish form (together with the great quantity of seeds, see Przyluski, p. 33, n. 1) must have been considered the most characteristic feature of these fruits. The same holds good for the udumbára-, the fig. In the Brāhmanas the wood of the udumbára- plays a rather important part and every time its use is explained with the words $\bar{u}rg$ ($v\bar{a}$) udumbarah "verily, the udumbara is (identical with) vigour". Cf. the above quotation from the Kath. S., and also 12, 13 (p. 175, 16 f.): aúdumbaro yūpo bhavati; devā vai yátrórjam vyábhajanta táta udumbáro 'jāyata, etc. "The sacrificial post is made of udumbarawood: wherever the Gods distributed the ūrj- ('vital power'), there arose the udumbara-". In Ath.S. 19, 31 an amulet of udumbára- is held to bestow prosperity (pusti-). The importance attached to the udumbára- is hardly based on its fruit, which is not very nutritious and only eaten in times of famine (Przyluski, p. 46) 23). We may rather suppose that the prominent position which this tree held in popular belief was due to the "vital power", in which the udumbara- was held to be rich on account of the "fertility" of its fruits. An interesting illustration of it is found in the wedding ceremonials according to the ritual of the Baudhayanas, which prescribes that the newly-married couple should leave the village on the fifth day after the wedding in order to worship an udumbara-tree and pray to it for offspring (see Hillebrandt, Ritualliteratur 68). The use of Udumbara-, Audumbara- as a tribal name 24) is obviously due to the totemism prevalent among the Proto-Munda population. Cf. Iksvāku- and see s.v. Kuvinda-.

Udumbalá- is an epithet of the two dogs of Yama in RS. 10, 14, 12 (Ath.S. 18, 2, 3): urūṇasắv asutṛpā udumbalaŭ yamásya dūtaŭ carato jánāň ánu. It is usually translated by "brown" or "copper-coloured" on account of its supposed identity with udumbára-, the fig-tree, the fruits of which are light-brown (Pet. Dict., Grassmann. Worterb. zum Rigveda, see Neisser, Zum Wörterb. des RV., s.v.). This is, of course, merely conjectural as the exact meaning of the word is unknown. Sāyaṇa's explanation (urubalau, vistīrṇabalau) shows that he did not know the word either. Since the dogs are described as being śabálau "brindled" in v. 10, there is no reason to suppose that udumbalaú denotes a colour at all 25). From

²³) The value of the *udumbara* fruit for medicinal purposes seems to have been unknown before the classical period.

²⁴) See Przyluski, p. 1 ff., and cf. Bṛhatsaṁhitā 15, 3.

²⁵) Hillebrandt, Lieder des RV. 119, and Oldenberg. Religion des Veda 575, n. 3, do not translate it. For later speculations on Sabala and Syāmā, see Jaim. Br. 1, 6 (Caland, p. 5 f.)!

the variants ulumbala- (Taitt. Ār. 6, 3, 2; Āp. Mantrap. 2, 16, 2), ulumbara- (ulumbaraḥ sārameyo Hir. GS 2, 7, 2), udumbara- (Paipp. variant of Ath.S. 18, 2, 13) ²⁶) we may infer that the original form of the word was *uḍumbara- (*uḍumbala-). It is probable, therefore, that it is ultimately identical with the preceding word, its meaning being "fat, obese". Cf. e.g., S. ḍub ḍubi(a) "full, swollen (stomach), tight, stuffed", ḍum "to make (or be) pregnant", ḍum ḍum "having a swollen, protruding stomach", dhumā "short and fat, corpulent, fat and lazy (boys, bullocks)", dhumā, dhumsa, id., dunerae "stout (women)", domo "to swell, cause a swelling", lobok' lobok', lobhok' "stout, fat, obese", ṭub ṭubu "distended (stomach), visibly pregnant, to impregnante, get an overfull stomach", ṭhompo "large and round (tubers)", thom thorok' "thick, stout and short", etc.

With a different accent the word occurs in Ath. S. 8, 6, 17

uddharsinam múnikesam jambháyantam marīmrsám upésantam udumbálam tundélam utá sáludam.

These words describe goblins who are supposed to approach pregnant women. The hymn abounds in obscure terms which are either epithets of demons in general, or designations of special classes of them. As for tundela, Roth took it as the name of a certain spirit or goblin, whereas Whitney renders it tentatively as "snouted" (=tundika in stanza 5). Since however tundela is rather identical with tundila "having a prominent navel" (S'ankh. GS. 4, 19), it may be regarded as an indication that the popular belief about little pot-bellied demoniacal beings, well-known from the later sculptural art, dates back to the Vedic period. Cf. v. 10 of the same hymn, where kuksilah (=brhatkuksayah comm.) are mentioned. The words udumbalam tundelam may accordingly be translated "big-bellied and with a protruding navel", which better suits the context than "brown", as references to the colour of these goblins are rare (cf. krsnah in v. 5). It should be added that Hidimba, name of a Raksasa, is a derivative from the same root (see dimb(h)a); cf. also kusmanda, kumbhanda.

Przyluski, p. 34 f., has pointed out that the names of several musical instruments are derived from the words for "colocynth" and similar fruits. Beside lābukī-, f. "a kind of lute" (Hārāvalī), cf. alābuvīṇā- "a lute with the shape of a bottle gourd" (Lāṭy.), perhaps identical with the Bengali alābu sāraṅgī, to which Przyluski refers. Skr. lex. kolambaka-, m. "der Körper der indischen Laute" may have been derived from a word with the meaning "bulky, bulging. big-bellied", Cf. Pa. kolamba-, koļamba- "a pot, a vessel in general" (and, with different vowels, kaļopī-, khaļopī- a vessel, basin, pot, basket" from *ka-dop-), Pkt kolamba-, m. "a pot, pan" (piṭharam. Deśīn. 2. 47; to be separated from kollara-, id.), Mar. koļābē "a pot with a wide mouth". Without prefix: Beng. dābā, dābar

²⁶) Oldenberg, Noten on 10, 14, 12.

"a capacious pot (of metal), a round vessel" (Chatterji 494 suggests derivation from $darv\bar{\imath}$ -), $dib\bar{a}$, $dibiy\bar{a}$ "a small round box" (Chatterji 495), Hi. $dabb\bar{a}$ "small box, casket", Tam. $tapp\bar{a}$ "round box, casket", Hi. $jamb\bar{u}$, $camb\bar{u}$ "narrow-necked vessel", etc. The connexion of the last words is however not quite certain on account of Nep. $dibiy\bar{a}$, which is apparently connected with Skr. cipita- (q.v.). If Pa. kalamba-, n., the name of a certain herb or plant, really denotes a bulb or radish (as is suggested by the rendering $t\bar{a}lakanda$ - in some commentaries, see PTS Dict.), it contains the same radical element. Cf. further Pkt $lumb\bar{\imath}$ - "cluster" (stabakah Desin. 7, 28) and see s.vv. $\bar{a}topa$ -, dimb(h)a-, $d\bar{a}dima$ -.

7. unduru-, m. "mouse".

Cf. undura-, unduru-27), m. "mouse, rat" (Lexx., Suśr.), undara-(Yaśastil.) undaru-, indūra- (Lexx.). As for -ūra- varying with -ura-, see Frisk, Zur Indoiran. and griech. Nominalb. 48. Moreover a word kundu-, m., with the same sense is quoted by the S'abdakalpadruma. Like karbu-(: karbura-) 28) it may stand for *kundur which was taken as the nominative of a stem kundu-. All these words accordingly contain the prenasalized root-element -ndur. The interchange of i- and u- in the prefix may be due to a different representation of ĕ-. Its reflexes are still found in modern Aryan, cf. Mar. ūdar (vulgar undīr), Guj. undar "rat", Sgh. unduru contrasting with indūr in Hindi and the Eastern languages. Bloch, 89 (cf. p. 297) holds it to be a case of metathesis of i and u (as in the cognates of Skr. bindu- and puñjīla-), but the occurrence of indūra- and undura- in Sanskrit points rather to Munda vowel-variation.

It is clear that undura- is a borrowing from some native language; thus, e.g., Charpentier, Monde Oriental, vol. 18, p. 23 f., who is unable to trace the source of origin, and Chatterji in 'Pre-Aryan and Pre-Dravidian in India', Introd. p. XXIV, who compares Khmer $k\bar{a}nd\delta r$ (Old Khmer $k\bar{a}ntur$) "rat". This may be correct, but the direct source of these words is prob. to be found in So. guntúr- "rat", $k\bar{e}nt\hat{u}r$ - "bat". The bat is often denoted by the same word as the mouse, cf. Bahnar hamet "bat" (Besisi $h\bar{a}p\bar{e}t$, $hamp\bar{e}t$, $s\bar{a}p\bar{e}t$): Nicob. komet "mouse" and Dutch vleer-muis (Germ. Fledermaus), French chauve-souris, Russ. letúčaya myš', etc. If this is correct, the Sanskrit words have a d for t, owing to the tendency to voice prenasalized explosives 29). As for undura-, indūra- etc., they either stand for *kundur, *kēndur with loss of the k (via h) or they contain a prefix e(n)-. So. on(e)rée- "rat" is hardly related; on Kui oḍri "rat, mouse" and Skr. dorikā- "musk-rat" I do not venture to prenounce an opinion.

²⁷) Cf. the borrowing Tamil unturu "bandicoot" (in a lex. work).

²⁸⁾ See Acta Orientalia, vol. 16, p. 306.

²⁹) See Acta Orientalia, vol. 16, p. 204.

With regard to So. $k\bar{e}nt\bar{u}r$ "bat" the question arises whether $jat\bar{u}$ -(Ath. S., Maitr. S., Vāj. S.), $jat\bar{u}k\bar{a}$ - (Caraka), $jatuk\bar{a}$ -, $jatun\bar{\iota}$ - (Lex.) may be derived from * $jat\bar{u}r$, ' $j\bar{e}t\bar{u}r$ and thus be connected with So. $k\bar{e}nt\bar{u}r$. So long as no such word with the prefix $j\bar{e}(n)$ - has been traced in Munda this remains hypothetical. See also s.v. $v\bar{a}tuli$ -.

8. kajjala-, n., kajjali-, f. "lamp-black, used as ink or a collyrium".

First occurrence in Suśr., common in Class. Skr.; cf. Pa. kajjala-. No plausible explanation has been given. The PTS Dict. takes it as being "dialectal for kad-jala- from jalati, jval; orig. burning badly or dimly, a dirty brown". Bloch, BSOS 5, 738, suggests some connexion with Kann. kādige, Tel. kātike (from Drav. kar- "black"). Although several of the mod. Hi. forms of this word (kājal, kajlā, kajlā, kajrā, etc.) have been adopted by modern Munda, its ultimate origin seems to be in Proto-Munda. Derivatives from ka-ya "black" (partly mixed up with reborrowings from mod. Aryan) are, e.g. S. koya "black (with dust), smirched", koya horo, koeya horo "a variety of the paddy plant (grain is black-looking)", kuya "black smirch (round the mouth), to smirch, smut", kuila (fem. kuili) "black, dark-skinned", kuila "charcoal" (Hi. koilā, see s.v. kokila-"charcoal"), kajra "having dark spots on the hump of the head" (Hi. kajrā). It would be tempting to compare Perak Semang sekai (s'koi, pěkoi) "black", but beside koya "black, smirched" there occurs goyak' "having a black spot (on the tongue), to blacken, smear oneself on the cheek with soot", which, again, is a variant of gotak', id. The last words must accordingly be derived from a root gu-du (d > y and > t > t), unless we should assume a contamination of different words. In any case, these words tend to show that koya and the other words quoted belong to a root with initial g, provided they are connected with goyak'. The remarkable Nep. equivalent of kajjala-, viz. gājal "lampblack, soot, the black pigment placed round the eyes", confirms this supposition.

If however our conclusion that ga-ya is a variant of ga-da is correct (which conclusion is based on the assumption that goyak' and gotak' are dialectal variants of one and the same word), this result, besides rendering the connexion with Semang Perak sekai rather doubtful, makes the problem much more complicated. S. hende, M. hende, K. kende "black" are derived from an original *kende, cf. Ho hende 30), Nimar dialect of Kurku kende 31). Do they represent a variant with e (by the side of goyak', koya, and kajj-)? If so, the question arises whether the words for "black", from which Skr. $k\bar{a}la$ - is derived, are of Munda or Dravidian origin. Cf., e.g., S. karea "jet black (animals)", kareo, id. (men), a leech (a taboo sub-

³⁰) See Lionel Burrows, Ho Grammar (Calcutta 1915), pp. 121, 126, 161.

³¹) As a rule, this dialect preserves much more faithfully medial cerebrals than the "Standard dialect".

stitute forjok), kari "black (animals), jet black", karidan, karindan "black, dense, heavy (clouds, also about black and dirty people, buffaloes)" and. on the other hand, Tam. karu "to grow black, darken" (karuppu "blackness, darkness", karai "black colour, hue, tinge"), karu "dark colour", kari "charcoal, black pigment for the eye", karukkal "darkness, cloudiness", kannan-kariya "very dark, jet-black", kāri "blackness, that which is black", kār "id., cloud", kāl "blackness", perh. karuku- "to be scorched, to blacken by fire or sun, to turn brown, become dark, grow dim", kanru- "to be scorched, to be sunburnt", Kann. kādu, kandu, kan, kar, kare, kar, kare, kari, karrage, kār, kāru, kāļ "blackness. dark-blue colour", kaļgu- "to turn black", kaltale "darkness", kādige (Tel. kātike) "lampblack, a collyrium prepared from it", Tel. kara, karra "blackness, stain, dirt", karaka "black(ness), dark(ness)", kāru "dark(ness), jetty black(ness)". There can hardly be any doubt as to the native Dravidian character of these words, and S. karea and kari must accordingly be loanwords from Dravidian, like Skr. kāla-, Hi. kālā, kārā, etc. If so, kajjala- is to be separated from Kann. kādige (see Bloch, BSOS 5, 738) 32). On the other hand, Gondi kossō "lampblack" is possibly a Munda loanword. These few remarks only intend to indicate a problem, for which they cannot give a definite solution. This question requires a far more detailed treatment than can be given to it in the present stage of these studies.

9. kanthá-, m. "throat, neck".

Since the S'at. Br., but sahákanthikā- is attested as early as the Ath. S. (10, 9, 15). The suggestion that kanthá- and kandhara- (class.) have developed from *kanthra- (Wackernagel, Altind. Gramm. I, 171) is not convincing, the less so since Sanskrit has some other words which point to a root ghat-, kat-, cf. ghātā- "nape of the neck. neck" (Suśr., Amara), which survives in Beng. H. ghār (Pkt. ghāḍa-), and must have had a sideform *gatta- (presupposed by Panj. gatta "nape of the neck" and other words quoted by Turner s.v. kath 33). Chatterji, Pre-Aryan and Pre-Dravidian in India, p. XXIV, connected the Bengali word with Skr. gala-, Sakai gloh, gälo, which is hardly correct. The root form kat- occurs in kṛkāṭa-, n., "joint of the neck" (Ath. S. 9, 7, 1), kakāṭikā- "a part of the human occiput" (10, 2, 8 "hindhead?" Whitney), kṛkāṭikā- "joint of the neck" (Suśr.), kṛkāṭaka- "neck" (Vyutp.). Perhaps kaḍaällī "kaṇṭhaḥ" (Deśīn. 2, 15) is also connected with these words. Hemacandra, it is true, quotes kṛka- "larynx", hence kṛkāṭa- might be regarded as a derivative in -āṭa- (thus, e.g., Tarapada Chowdhury, JBORS vol. 17, 1931, p. 38). Krka- might then be connected with J. kunka, Kh. konko, So. sánkā "neck", S. kankha "edge, brim" (cf. S. totka "occiput, nape of the neck",

³²⁾ Skr. ajjhala- (see s.v. kokila-) leaves no doubt as to its Proto-Munda origin.

³³⁾ See also Turner, BSOS. 5, 1, 124.

M. tutka, tuṭkā "back of the neck or head" and Mon ka' "nape of the neck", Khmer ka, Bahnar ako, Stieng kou "neck") 34). On the other hand, many words quoted in lexicographical works are only inferential forms based on an incorrect analysis of existing words (see s.v. khiṅkira-). It is possible, therefore, that kṛkāṭa- and its derivatives contain a prefix kṛ- (ka-) and belong to the group of kaṇṭhā- and ghāṭā-. We may then compare S. hoṭok' "neck", M. hoṭo "neck, throat" (<*koṭ-ok'?) and (with nasalization) Sem. not, nut "neck", Stieng nun "nape of the neck", Sakai taṅgun (Central Sakai taṅg'n) "neck", Tembi taṅgön "nape of the neck". Kaṇṭha- cannot be separated from Kann. gaṇṭalu, id. (Burrow, BSOAS. 11, 133) but this word (whether or not connected with Tam. kaluttu, etc.) may be a loanword, as kuṅke "nape of the back" (ibid. 340) evidently is.

10. kanaka-, n. "gold".

Since Ṣaḍv. Br. 4, 6 (see Weber, Omina und Portenta 326). Usually connected with kān̄cana-, n., "gold", Greek κνηκός "yellow, red", Old Engl. hunig "honey", etc. (see Boisacq, Dict. étymol. de la langue grecque, s.v.). Kanaka-, however, presents serious difficulties since this explanation is based on the assumption of an IE. word *qenəqó- (thus Walde-Pokorny I, 400, otherwise Petersson, Studien über die idg. Heteroklisie 170 f.). F. Otto Schrader, KZ. 56, 126 n. 2, compares Tam. kanal "to be hot, to glow (as fire), to boil, burn", kani "to be red-hot, to glow, ripen", kanali "sun", etc., which however presuppose a different primary meaning.

Although I am unable to propose a more satisfactory explanation I would draw attention to the fact that lexicographical works mention two other words for gold, which seem to be akin to kanaka, viz. kakanda, m., and kandala, m. The first of them is of particular interest as it suggests a Proto-Munda origin of kanaka, which is accordingly to be referred to a root ka-da or ga-da (ga-da?) 35). The primary sense must have been either "glittering" or "lump". If the root be ga-da, we may also connect Skr. $h\bar{a}taka$ -"gold" with this group. The traditional derivation from IE. *ghel-to-, though not impossible, is anything but convincing. Skr. $k\bar{a}ncana$ - is ambiguous.

The native lexicographers derived kanaka- from a root kan- "to beam, radiate" (which Böhtlingk, Pet. Dict., wrongly rejected for a far more problematical connexion with $kan\bar{\imath}y\bar{a}n$). This root is mentioned in the Dhātupāṭha and occurs in the late classical literature, perhaps for the first time in Uttararāmacar. 5, 5 (v.l.), see Renou, Journ. As. 1939, p. 397f. Rather than being due to a misinterpretation of kan- "to be satisfied" (RS), it is more likely to have been deduced from kanaka- and kanaka-. If so, it does not furnish any support for our explanation of kanaka-. Nor is

³⁴⁾ Cf. also Blagden's Vocabulary sub N. 26 (Sakai kua', Semang kua "neck").

³⁵⁾ Kittel, Kannada-Engl. Dict., Pref. XXV, points to Drav. cini, cinna, cinni "gold", which may be palatalized variants of kan-.

the obscure word *kanáknaka*- (Ath. S. 10, 4, 22), for which Tarapada Chowdhury, JBORS 17, 1931, 59, suggests a meaning "bright, glistening", a reliable foundation on which to base any theory.

11. kabarī-, f. (kabara-, m.) "a braid of hair".

Only attested in the classical literature, as Amaruś., S'iśupālav., Kādamb. 300, 4, Uttararāmac. 50, 3, Dharmaśarmābhyudaya 4, 10. 14; 5, 48, Vikramānkadevac. 12, 46; 15, 4; 18, 62, Kathās. 119, 155, Bhāratamanīj. 19, 989, Bhāg. P. (Pet. Dict. II, 181, V, 1271), Gopālakelic. 45, 24; 90, 30, Varadāmbikāpariņaya 136 (v. 113), Brahmavaivartap. 4, 15, 11. 155. 158; 4, 69, 10, etc. But kabarī- must have been introduced into Sanskrit at a comparatively early date since Pāṇini 4, 1, 42 has a rule concerning this word in the sense of keśaveśaḥ (hair-dressing).

Kabarī- obviously belongs to a root bar- which is also found in barbara- (varvara-) "curly" (Kāṭh. S. 25, 7), barbara- "curly hair" (Hemac., Medinī), Pkt. babbarī "dressing of the hair" (keśaracanā, Deśīn. 6, 90), cf. Hi. bābar "a kind of grass (of which a sort of twine is made)", bābriyā "head of hair (long and uncut)", babrī "cropped or dressed hair, forelocks, tresses", Mar. bābar "dishevelled hair" (Bloch 375), Nep. bābari "long and uncombed hair". The nasalized form of bar- occurs in Pkt. tamara- "a mass of braided hair" (keśacayaḥ, Deśīn. 4, 1).

A Munda root bar, bar (wa-da) "to wind, twine" must be assumed on account of S. bharbharao "to spin round", baber "string, cord, twine, rope, to make do.", burhu "a bundle of rope, or string wound into a bundle", bor "a rope of straw" (M. bor "a thick rope of straw"), $b\bar{a}or\bar{e}$ "to wind thread in the figure 8", bherwan "to turn round, wheel round, spin round", binda "a sheaf, bundle, faggot", M. $bir\bar{a}$ "a bundle of crop", Ho $bir\bar{a}$ "a big bundle of paddy" (cf. Hi. $b\bar{i}d$ "a bundle of reeds", $b\bar{i}d\bar{a}$ "a roll of paper, a twist of grass"), S. $bh\bar{i}nd$ "a large bundle of burden (tied)", M. $beor\bar{a}$ "to tie paddy seedlings together, to tie up the hair". That $kabar\bar{i}$ -stands for $*kabar\bar{i}$ may perhaps be inferred from Hi. $kab\bar{a}r = kab\bar{a}r$ "a load or bundle (of grass or firewood, etc.), a heap or collection (of miscellaneous articles), old and broken furniture". The vowel i, e is also met with in other derivatives from this root, see s.vv. $\bar{a}p\bar{i}da$ - and mendha-.

Late Skr. davara-, davaraka-, m. "thread, string" (Schmidt, Nachtr., cf. davaraka- "rajjuḥ" Hemac. Uṇādigaṇasūtra, Pkt. davara- "thread" (tantuḥ Deśīn. 5, 35) may possibly stand for *ḍavara-, cf. Pkt ṭamara- from *ḍa-mara-. But how are we to account for Pkt. dāra-, m. = dora-, m. "kaṭisūtram" (Deśīn. 5, 38), since Pkt. dora-, ḍora- is usually connected with davara- (see Turner, s.v. doro; but cf. ḍoṇḍā-, p. 131!)?

The foregoing explanation of kabarī- also sheds a new light on Skr. venī- "a braid of hair, hair twisted into a single braid" (since Kāty. S'S). It dates back to the oldest Vedic period for in suvenīḥ (RS 10, 56, 3) Oldenberg has recognized the same word. Although it was not easy to

explain the cerebral in the younger form of the word (Oertel, Gött. Gel. Nachr. 1934, 187, compared pan-: paṇ- "to admire"), the Rigvedic form seemed to support the traditional derivation from vā- "to weave". If, however, veṇ̄- is a Proto-Munda word, the n in suventh is simply due to the Aryanizing tendency of the Vedic language (cf. Ved. udumbára-: Class. udumbara-). If so, veṇ̄- must be the original form of the word, in which case it is, together with vīṭikā- "preparation of the Areca nut enveloped in a leaf of the betel plant", to be connected with kabarī. See āpīḍa-, and cf. Pkt. biṇṭa-, m. "covering of a fruit", viṇṭaī "wraps round", viṇṭiā-, f. "bundle", etc. (see Turner, s. vv. bīr, biro, who rightly assumes a foreign origin and cf. Bh. uin "to twist", p. 111).

Similarly the derivation of H. $ba\underline{t}n\bar{a}$ "to twine, twist, to plait, weave", Nep. $b\bar{a}\underline{t}nu$ "to twist. entwine, weave, plait", which Turner connects with Skr. $vart\acute{a}yati$ "turns", requires reconsideration. Cf. S. $\underline{e}dh\underline{e}$ $\underline{b}\underline{e}dh\underline{e}$ "to twist, tie round and round, make complicated" ($\underline{e}c\underline{e}$ $\underline{p}\underline{e}c\underline{e}$ "to twist and turn"), etc. With $j < \underline{d}$: S. $\underline{b}aj$ "to plait, entangle, ravel", $\underline{b}a\underline{j}hua$ "to entangle, hinder" (cf. H. $\underline{b}a\underline{j}hna$ "to be entangled", Nep. $\underline{b}a\underline{j}hnu$ "to quarrel, wrangle", etc.? from Skr. $\underline{b}adhyate$ according to Turner, but cf. S. $\underline{a}\underline{j}ba\underline{j}hao$, $\underline{l}a\underline{j}$ $\underline{b}a\underline{j}hao$ "to involve, entangle, muddle", etc.).

Note. As an additional instance of Vedic substitution of a dental sound for a cerebral may be mentioned Ved. bhánati "speaks, tells" as opposed to bhanati "speaks, says, calls" (Hi. bhannā, etc., see Turner s.v. bhannu). The latter verb is confined to the Classical language unless paribhananti (Jaim. Br.) may be regarded as a Vedic instance (see however Oertel, Gött. Nachr. 1934, 188) 36). Pa. bhattha- "spoken, said", which the PTS Dict. connects with bhan- (< *bhan-ta-?) may stand for *bhāṣ-ṭa-. A sideform of bhan- occurs in Mar. mhanne "to speak, say" (whence Gondi, Wun District, mhan-, Naiki mhūn). Mhan- is isolated in Indo-Aryan (Bloch 392) unless Dardic (Bashkarik) män-, man- "to say" is connected (unlikely Morgenstierne, Acta Orient. 18, 244). According to Tedesco, Language 19 (1943) 17, n. 72, bh has been assimilated to the following nasal, but m is also found in S. men, M. Ho men "to say, tell", K. mhen, men, id. (: S. meta "to say"). In Mar. mhanne (partic. mhatla) we have accordingly to do with Proto-Munda nasalization. If however bhan- | mhanis of Proto-Munda origin, we may further compare Ved. vấṇī- "voice" (vaṇati "śabde", Dhātup.), where the cerebral has been preserved in the Rksamhitā. From the same root wa-da (cf. So. ber "to speak"?) may further be derived bhaṣate "speaks, says" (since Taitt. Br., S'at. Br.) with $bh\bar{a}$ ș- standing for $bh\bar{a}$ ž-. The traditional connexion with Lith. $ba\tilde{l}$ sas "voice" is not recommendable as balsas is a specific Lithuanian derivative from bal- (Trautmann, Baltisch-Slavisches Wörterb. 25) and Edgerton,

³⁶) Walde-Pokorny II, 124 and 182, separate these verbs and derive *bhánati* from an IE. original **bha-n-ō*, which is against the phonetic laws.

KZ. 46, 177, rightly lays no weight on the suggested relationship with bhāsate (cf. Uhlenbeck).

Munda words properly signifying "to talk with each other" often assume the sense "to quarrel", cf. S. ropor (from ror "to speak"), Bh. gapam (cf. Kh. So. gam "to speak", S. gam "a folktale", M. gap sap "talk", Nep. gaph "talk, conversation", etc.), M. kāpāji "talk, quarrel" (cf. kāji "to say"), etc. It would seem justifiable, therefore, to derive Skr. bhaṇḍate "reproves, reviles", Pa. bhaṇḍati (Dhātup. also paṇḍati) "quarrels, abuses", (see Turner s. vv. bhār, bhankanu) from the same root. Cf. Skr. bhaṭ-"paribhāṣaṇe", Dhātup. 1, 817. The derivation of Pkt. bollaï "speaks" is doubtful; see Bloch, BSOS 5, 742, who suggests a Dravidian origin.

12. kamatha- "bamboo".

This word only occurs in the lexicographical work S'abdaratnāvalī but it is common in most of the Modern Indo-Aryan languages, cf. H. $k\tilde{a}war$, $k\tilde{a}war$, $k\tilde{a}war$, "a bamboo lath with slings at the end for carrying things in", Si. $k\tilde{a}v\tilde{a}th\tilde{\tau}$, Mar. $k\tilde{a}vad$ "bamboo lath with slings", Beng. $k\tilde{a}math\tilde{a}$ "bow" (Hi. $kamth\tilde{a}$ "a bow, esp. one made of bamboo"), etc. See Bloch, p. 310, Turner, s.v. $k\tilde{a}mro$.

Turner rightly supposes a non-Aryan origin and compares Skr. (lex.) kambi- "shoot of joint of bamboo", Pkt. kambā, kambī "stick", Ass. kāmī "a long strip of bamboo", Guj. kab "bamboo chip". If these words were really connected, we should have to assume a root *kamba-/*kama- which could be Dravidian as well as Munda. Pkt. kāva- by the side of kāvaḍa-"carrying-pole" would indeed point to the conclusion that -tha- is suffixal. Another explanation was proposed by myself (Acta Orient. 16, 296, n. 2), viz. to connect it with S.M. mat', K. mad "bamboo". In that case, however, the cerebral th would be due to a phonetic change which is only found in a few Munda Gialects. Thus in the Southern dialect of Kurku, which is spoken in Nimer, final t' has become t, e.g., titit for titit' "bird"; and in Ho (a Kherwari dielect) we find d for i' owing to the fact that "in pronouncing the dental semi-consonant a greater part of the tongue strikes against the palate than is the case in Santali" (Konow, Ling. Survey IV, 84). These dialectal phenomena, however, which are probably of comparatively recent date, can hardly account for the cerebral in kamatha-. On the other hand Skr. karmāra- (Amara, Medinī), karmarī- (Rājanighaņţu) "bamboo" may be quoted in support of our supposition that kamatha- contains a prefix ka- (in which case Pkt. kāva- must owe its origin to a wrong analysis of kāvaḍa-, as Skr. karka- from karkara- "mirror", k(h)ikhi- from khinkira- "fox", dundu- from dundubhi- "drum"). If we start from a rootword *ma-da, we may further compare Mar. mān "large bamboo", mānā, māngā "long bamboo", māṇyā "small bamboo", Nep. māndro "cane mat, large mat made of bamboo". (Kui māṇi, māṇi "bamboo" is obviously a loan-word). When standing in final position the t, like the other final explosives, has become a checked consonant in Munda; cf. S. det' (and, with infixes, deret', denet' denet') "tiny, very small": rethe "dwarfish, small, stunted, puny, undersized", etc. (root da-da "short, stunted, small"); M. lad [= *lat'] "bread, to make cakes" 37), K. lat' ($lad-\bar{e}$) "to make cakes": S. lathe "a kind of dough-ball", Skr. laddu-, ladduka "a kind of cake"; S. let' let' "wide outstretched": les lese "with legs spread out", tanda "to straddle, part the legs", tada "a piece of wood used to force open the mouth" (root da-da "wide apart"); *cat'lom in M. $c\bar{a}d'lom$ ($c\bar{a}lom$), Ho cadlom: S. candlom (candbol), Bh. $c\tilde{ar}$ bol "tail". Hence Munda mat' "bamboo" (S. mat', K. mad, mat, Nimar dialect mat < mat') may be a specific Munda development of *mat.

Initial m of the Austric languages mostly (if not always) represents a nasalized labial sound. As a matter of fact, Sakai has awāt, awād (Centr. Sak. awot) "bamboo" and, with nasalization of the final consonant (as in Mar. mān), awān, Semang awen. id. Blagden compares Selung kaoan, id. (=*ka-wan), which contains the same prefix as kamatha. The question arises whether baná-, m. (RS), bana-, m. (Ath. S.) "a reed-shaft, arrow", vấnī- "reed" (RS.), and perhaps vāṇá- (RS. 4, 24, 9) 38), also belong to this affiliation. The explanation proposed by Przyluski, BSL. 25, 66 ff. (Pre-Aryan and Pre-Dravidian in India 19 ff.) is unacceptable for morphological reasons. In support of our suggestion we might point to vanīra-, m. "Calamus Rotang" (since Mhbh. Rām.). On the other hand, words for "reed" are often derived from roots conveying the general meaning "to bare, to strip' (Skr. dūla-, naḍa-, bundá-), which would lead us to connect bāna- with the wordfamily of baṇḍá-. But then, the bamboo may also have been named from its leafless shaft. This question must be left undecided. The connexion of Skr. vénú-, m., Pa. velu- "bamboo-reed" is doubtful on account of Tamil vintu, ventu, vēļam, vēlai, etc. (Cf. also Skr. vetra-: Tam. vetir, etc.).

13. k a v a l a -, m. "a mouthful, bit, morsel".

Since Mhbh. and Rām. The etymological connexion with Old Engl. héawan "to beat", Lith. káuti "to forge" (see Uhlenbeck) is unconvincing. The original form of the word was *kabaḍa-, cf. Pāli kabaļa-, kabala-, Skr. kavaḍa-, kabaḍa-, kapaḍa- (see Lüders, Philologia Indica 559, Schmidt, Nachtr.) and Tamil kavaļam, kavaļam. Geiger 60, it is true, regards v as the original sound from which b has developed, but Pischel and Lüders are no doubt right in assuming an original form with b. This excludes the possibility of comparing Tamil kavvu- "to seize, grasp with eagerness", kauvu- "to seize with mouth, grasp with eagerness, to absorb, engross", kavar- "to seize, grasp, catch, steal" (cf. also Kuraļ 100, where

 $^{^{37}}$) Rakhal Das Haldar has M. lad "cake" and $l\bar{a}d$ "bread". The first form is probably incorrect.

³⁸⁾ See Hillebrandt, Ved. Myth. I 2, 226: "Rohr, Somastengel".

kavarntu has the sense of eating = nukarntatu, tinpatu, comm.); Tel. kaviyu- "to rush upon, fall upon, to catch (as fire)".

In Santali we meet with a group of words which are obviously native Munda (on account of the various sound-developments) and point to a root ka-wa "to grasp". Thus we find:

with suffix -l-: khabol "a mouthful, a handful" [cf. Beng. khābal "a handful, mouthful, grasp" (by the side of go-kal from go-kavala-) which, although Chatterji, 159, 438, 459, regards it as a development of Skr. kavala-, seems rather to be a younger borrowing from Kherwari]; khabla khābli "to claw deeply, grab, clutch deeply" 39), khablao "to snap, grab, clutch, grip", khablok' "to swallow, devour"; khabal khabal "pecking, grabbing, bolting (food)";

with cerebral suffix: khabṛao "to grab, clutch (with the claws)"; khabṛa, khabṛaha (khabṛaha) "gluttonous, greedy", kabaṛ koboṛ "to pick up quickly" ³⁹), kapṭao, kamṭao "to grap, catch, seize with claws", kapṭa kạpṭi "to grip one another, seize, pull one another";

with palatal suffix: khamcao "to snap, snatch, gripe, grab, seize a handful, a handful" (cf. Beng. khāmcā), khamca khamci "to seize, grab, snatch, tug or pull at each other".

All these forms presuppose an original *kabad (with the normal change of d to l, r, c respectively). Skr. lex. kapatī-, f. "two handfuls (a certain measure)" (S'abdaratnāvalī) is obviously another variant of this original with unvoicing of b and d. S. habadia "gluttonous, greedy, insatiable" and khauda, khaudaha, id., though also presupposing an earlier form *kabad, *kawad, have a specialized meaning, which is also found in some words which are derived direct from the root, e.g. khaua "gluttonous, greedy", khau khau "greedy, craving for food", khauka "gluttonous, gormandizing", khawaia, khaba "glutton", khabe khab "devouringly (eat)".

14. kaśmala-.

- 1) "dirty, foul" (Halāy. 4, 42, Dhūrtasamāgama); n. "dirt, filth" (svadehakaśmalam pūti, Ind. Spr. 2 1761); = pāpa- (S'abdam. in S'abdakalpadr.).
- 2) "timid, shy" (see PW. V, 1273, one instance); m.n. "timidity, shyness" (Mhbh., Rām., Bhāratamañjarī 7, 421 etc.. Bhāg. P.).

The word is but seldom used as an adjective; only in the sense of "shyness" is it rather common ($=vis\bar{a}da$ - Nīlak. ad Mhbh. 1, 2, 246 Bomb.).

Kaśmala- is clearly a non-Aryan word and the few attempts made to explain it from IE. (cf. Petersson, Studien z. idg. Heteroklisie 29) may therefore be passed over in silence. Note the ā in Tam. kacumālar "dirty, slovely persons", kacumāli "slut, dirty person" (loanwords). It obviously

³⁹⁾ Contamination with other roots meaning "deep" and "quickly" respectively.

is composed of a prefix kaś- and a root mala which is further found in the following words:

śámala- n. "stain, spot, fault, blemish" (only in Vedic literature, since Ath. S., Taitt. S., etc., and in the Bhag. P.)

malīmasa- "dirty, impure, grey" (Kāvya, Kathās.)

mála- n.m. "dirt, impurity"; (since Ath. S., Taitt. S., etc.; once málā "dirty garments" RS. 10, 136, 2).

malina- "dirty, impure, dark-coloured, grey, black; n. meanness, fault, sin." (since Mhbh.; quite common).

The last words require some comment since their Indo-European character has not, so far as I know, seriously been questioned. Especially malina-, which is connected either with Greek $\mu \hat{\epsilon} \lambda a \nu$ - (IE. *melh2n-) or with Lithuanian mëlynas "blue" (see the recent discussion by F. Specht, Der Ursprung der indog. Deklination, Göttingen 1944, pp. 110, 119 and Kuhn's Zeits. 65, 200), seemed to prove this beyond question. The ending -ina- however occurs in a number of Proto-Munda loans, as naliná-, kaṭhiná-. Whether its origin is in Proto-Munda or in Aryan, the philological facts do not allow us in any case to regard it as an old formation as the Veda uses málavant- instead (in málavadvāsas-, adj., Taitt. S.). Moreover mala- and malina- do not denote a colour as most of their supposed cognates in other IE. languages do. Mála- cannot, therefore, be separated from kaśmala- and śámala-.

As for malīmasa-, its second element is obviously related to kalmaṣa- and masi-. Uhlenbeck, Kurzgef. etym. Wb. der ai. Sprache s.v., was accordingly right in referring to mála- and masi- (Incorrect Bloomfield, AJPh. 16, 433, and Renou, Grammaire sanscrite 258). The Proto-Munda word which malīmasa- reflects was an echo-word of the wellknown type, viz. a combination of two synonymous expressions with partial formal congruence. Only the ī is unexpected. Influence of the type sarīsṛpa-?

Whilst all these words only convey the meaning of impurity, kaśmalashows the sense-development to "timidity", which has hardly any parallel in IE. tongues (Latin sordēs "mourning-dress" is of course a totally different case). In Munda, however, this transition is quite common, cf. S. khad bad "miry, muddy, perplexed, anxious".

The Proto-Munda words reflected by these Sanskrit borrowings are derived from the root ma-la, cf. ma-la, cf. ma-la, spotted, a little soiled; to stain, corrode, rust"; perhaps ma-la0 "unclean, dirty colour, discoloured, tarnished" (prob. blended with ma-la0); ma-la1 "dirty, soiled (children), sad, dejected"; ma-la1 "sad, dejected, la2 miserable"; la3 "dejected, downcast, sad" (parallel to la4 to la5 from la4 from la4 solo la6 "dejected, sad, sorrowful, depressed", dolo la6 molo "dull, unwell, out of sorts, depressed". Mundari has la4 la8 la9 looking, dejected", la9 la9 for la9 sorts, depressed".

⁴⁰⁾ Cf. perhaps Skr. balkasa- "impure matters" ("Flocken" Caland, Ap S's 19, 4, 8)?

Skr. malina- is not, it seems, used in the sense "dejected"; its metaphorical use in the well known verse of the Hitopadeśa prayah samapannavipattikāle dhiyo 'pi pumsām malinā bhavanti is nearly identical with that of kalusa- in buddhau kalusabhūtāyām Pañcat. III, śl. 184. But Hindi malin means (besides the normal sense "dirty, impure") also "troubled, disturbed (in mind), indisposed, vexed, sad, downcast", which is perhaps due to Munda influence (S. mulin "dejected, downcast, sad", on the other hand, seems to have been reborrowed from Aryan). Hindi has also other derivatives from the same Proto-Munda root, which must have been adopted in later times, as malmalā "salt, brackish, sad, downcast, depressed", malbā "rubbish, dirt, materials of a broken house". These words must be separated from mal- in Nep. alamalla "perplexed, troubled", for which root see s.vv. ākula- and tumula-. A more remote cognate of mal- "dirty, depressed" is perhaps Bahnar möl "verstimmt", for which Schmidt, MKV. 111, proposes an improbable explanation. See further s.v. bhrmalá-.

The diphthong of Hi. mailā "dirty" is a vexed problem 41). It cannot be explained in the same way as the diphthongs in Nep. daūṭhe, Mar. maid (see s.vv. daṇḍá-, baṇḍá-), as many disyllabic variants point to *may-al, *may-il, cf. Pkt. mayala-, maila-, Nep. mayal "dirt, dregs", Tel. mayal, mail "dirt, foulness, impurity", mayala "dirty, foul, unclean, impure" (maila "id., dingy, dark-hued, of a grizzled colour, mixed of red, white, yellow, and black"), Tam. mayilai "foulness, dirt, ash colour, grey, mixed colour of white and black".

These words are either blendings or, rather, suffixed forms of may, the nasalized variant of $b\alpha$ - $y\alpha$, cf. S. maila (<*mayila), mocla "dirt, filth, dirty, filthy, soiled", damaila "dirty, soiled", bajrahi "slovenly, dirty, slatternly", b(h)ejrahi, id., ben'jak' serak' "dirty", beje beje "foul, running, dirty", bejelgak' "disgusting, bad-looking, dirty", bhaskar "ugly, unshapely"(?), bhasudan "dirty, slovenly", bhosdon "dirty, besmeared (with ashes, dust, etc.)", bhosndon, bhosndon,

In Dravidian we find two groups of words, the one meaning "dirty", the other "black, dim", between which it is difficult to draw a dividing-line. The first group is represented by Tam. mai "blackness, darkness, collyrium, ink, fault, defect, sin, dirt", maccu, māccu "blemish, fault", mācu "spot, stain, blackness" 42), Kann. macca, macce, Tel. macca "a black spot on the skin, a mole, freckle, scar of a wound", Kann. māsu "dirt, impurity", Kann. masi, māsalu, Tel. māsi "dirt", Tel. māyu "to

⁴¹⁾ See Bloch 391 and Additions XV with bibl., Turner s.v. mailo.

⁴²⁾ See F. Otto Schrader, BSOS 8, 759 (with problematical Uralian connexions).

become dirty, be destroyed", mastu "dirt, sediment", Kui māsi "filth, dirt, stain, wrong, wrong-doing, sin", māsa "to make a mistake", etc. Ramaswami Aiyar, who has studied the Dravidian words for "dim, dark, black" in the 'Educational Review' for Aug. 1930, concludes that the base ma- has "been very ancient in Dravidian, if not native in this language-family". We shall not enter here into a discussion of these words (which perhaps constitute a separate group) and of Skr. maṣi-, masi- "bone-black, ink", Tam. maci "ink", Hi. misī, Nep. misi, missi "tooth-powder, tooth-paste", S. misi "a powder used for tingeing the teeth a black colour (used by low-caste Hindus)", M. misi "black tooth-paste", etc. (cf. Tam. maci- "to mash, reduce to pulp"). But cf. mastu ~ S. bosto!

We cannot however ignore the fact that Skr. kalmasa- "spotted, variegated" (bunt, gesprenkelt, Pet. Dict.), Vaj. S., Taitt. S., etc.; n. "spot, stain", kalmāṣī- "a spotted cow", kalmaṣa-, m. "dirt, stain, sin" (since Rām., Manu), and kilbisa-, n. "fault, guilt, sin, offence" (since RS), which have a similar meaning and which must be Proto-Munda loanwords on account of the well-known prefixes kal-, kil-, show a cerebral s^{43}). As will be pointed out in the Appendix, a cerebral s stands for \check{z} and cannot be derived from y (as cc in Pkt. macca-, n. "malam", Deśīn. 6, 111, possibly might be). Since \check{z} has arisen from d, we are thus led to assume a root $m\alpha$ - $d\alpha$ ($b\alpha$ - $d\alpha$). As a matter of fact, Santali has several words which must be referred to such a root, cf. bodor "muddy, turbid, dirty, rotten", bode "muddy, turbid, dirty", sede bede, sedge bedge "to make dirty, muddy", sodor bodor "dirty, soiled", soron poton "dirty, grimy, soiled, untidy, unclean, slovenly", soroc' potoc' "hurriedly, slovenly", loso pondo "covered with dirt or dust, dirty, dusty", heran petan "slovenly, dirty, filthy, unclean, disorderly" (cf. hejlec' pejlec' quoted above); nasalized: mar- in manga mur'a "dust-stained, stained, dirty", marghat "dirt, filth, unclean, dirty, soiled" (cf. malgot' "unclean, dirty colour"). margaitha "dirty, soiled", murguc' = muiguc' "dirty". It should be noted that bhosndo is a blending of bas- and bad-.

It is clear that in accordance with the phonetic laws upon which the present work is based, it is possible to unite the roots mal-, may-, and $ma\check{z}$ -/mad- under a root ba-da "dirty". Cf. perhaps Mon kha-moit "dirt". The Munda data do not however allow us to answer the question whether this combination is necessary, nor do they solve the central problem whether these root-variants (if they are so at all) are due to a dialectal ramification of Proto-Munda or rather represent very ancient Austric variants. [See the introductory remarks and note the variation in mur-guc' $\sim mui$ -guc', root mar/may, blended with ma-ga].

⁴³⁾ Przyluski already combined *kalmaṣa-* and *kilbiṣa-* in his article entitled "Emprunts anaryens en indo-iranien" (Monde Oriental 28, 1934, 140 ff.), but connected them with Cham *bih* "poison", etc. IE. etymologies have been proposed e.g., by H. Petersson, Studien über die idg. Heteroklisie 146, and Scheftelowitz, KZ. 53, 253 (*kilbiṣa-*), 258, n. 2 (*kalmaṣa-*).

15. káśmaśa-.

This word is only once attested in Ath. S. 5, 21, 1 (in a hymn to the war-drum) vidveṣáṁ káśmaśaṁ bhayám amítreṣu ní dadhmasi "mutual hate, confusion, fear, we put into our enemies" (Whitney). The exact meaning of káśmaśa- is unknown. Roth suggested "Bestürzung" on account of its supposed relationship to kaśmala-, and Whitney remarked that it "is very possibly only a misreading for kaśmala-, as equivalent to which it is here translated". Although a word-analysis káśma-śa- is out of the question (see s.v. kaśmala-), the sense assigned to the word may be correct. Like kaśmala-, it must contain the prefix kaś-, hence the radical element is maśa-. We have no reason to regard it as a misreading as it is likely that other derivatives from the same root occur in Aryan, cf. Pkt. musahaṁ "agitation of the mind" (manasa ākulatā, Deśīn. 6, 134), which contains the same Proto-Munda suffix -ha- as kalaha-, laḍaha-, etc.

The radical element occurs in S. moc' moc', momomoc' "dejected, down-cast, sad, feeble", mas mas, mas masao, mus musau "indisposed, out of sorts", M. dhundur $mus\overline{a}$ "dejected, sad", duru musu "ill, indisposed", mas masao "indisposed", mos moso "lazy" (?), which may further be connected with ba-ya "dirty" (see s.v. kasmala- and note $mal\overline{1}masa-$). They must probably be kept apart from mos moso "silent, reserved (sulky or dejected)", musuc' "quiet, reserved", masac' musuc' "taciturn, retired, unsociable, to keep oneself aloof", masua "unsociable, indolent, lazy", moc moco "sulky, pouting", which convey a different meaning and belong to ba-ya "to turn aside, be sulky" (cf. bhen'cok' "to sulk", etc.).

If this explanation of káśmaśa- is correct, its meaning must have been "dejectedness, lack of self-confidence, shyness, timidity".

16. Pkt. kassa- "mud".

Cf. Deśīn. 2, 2 kasso tathā kaccharo paṅkaḥ. Bloch, p. 304, compares Skr. kaccara- "dirty", Hi. kacrā "fragments", Si. kaciro "bit of vegetables", etc. (cf. Turner s.vv. kacar and kasar), which may be correct for kaccharo. As for kassa-, Paravastu Venkata Ramanujaswami, in the 2nd ed. of the Deśīnāmamālā, derives it from Dravidian kasa, kasavu, but Tamil kacā, kacavu "a fibrous plant" and Telugu kasavu, kasuvu "grass, straw, sweepings" can hardly account for it. We may rather compare K. kāsā "earth, dust, dirt", S. hasa "soil, earth, land", M. Ho hāsā "earth, mud, soil".

Skr. lex. kāsū- "illness" (Hemac.).

Also written $k\bar{a}ś\bar{u}$ - Uṇādis. 1, 87 (= vikaladhātuḥ and śaktiḥ "spear", according to Ujjvala). Cf. K. $k\bar{a}s\bar{u}$, Kh. $kos\bar{u}$ "pain, to ache", S. haso "pain, to hurt, ache", M. hāsu "illness, to be ill, to suffer", Ho hāsu "to be ill", So. ĕsú- "fever", ĕsú-dā "pain", asú "to pain". With prefix ka-, cf. Palaung shū "pain".

18. kuntha- "blunt, dull".

Since Mhbh. and Rām.; when metaphorically used it means "vexed" (bāṣpakuṇṭhakaṇṭha- Daśak. 100, 15—16 Ag.) or "incapable" (with inf., Vikramānkad. 18, 40). The participle kunthita- (same sense) is used since Kālidāsa. Several attempts have been made to explain it as a word of IE. descendance: Franke connected it with Greek zvllós (see Wackernagel, Altind. Gramm. I, 170), Uhlenbeck s.v. regards it as Middle Indian on account of mod. Persian kund "blunt", Bal. kunt "blunt, coarse, silly", whereas Tedesco, JAOS. 65, 97 briefly indicates a new explanation (from kṛttá-). Its Proto-Munda origin is however beyond question on account of several Indo-Aryan words with similar meanings ("short, stunted"), which show the variants kunt-, kut-, kun-, and Proto-Munda prefixes; cf. Pa. kunta- "stunted, dwarfish", lakuntaka- "dwarf", Bashkarik (Dardic) lúkuť "small" (Kshm. lŏkuť, Pashto lw. lakute, etc., see Morgenstierne, Acta Or. 18, 241); Skr. lex. matkuna-, m. "a beardless man, an elephant without tusks, a small elephant", matkuṇā-, f. "pudendum sine pube". The last words are probably blendings of kun- and mat- (see bandá-).

The Proto-Munda root $g\alpha$ - $d\alpha$ shows the same combination of meanings as $d\alpha$ - $d\alpha$ (see suntha-, danda-), $w\alpha$ - $d\alpha$ (see banda-), etc. viz. "I. stunted, short, small; 2. bare, barren". (As a matter of fact, they may be explained as very early derivatives from an ultimate radical element $d\alpha$ 44). The sense "blunt" is met with in S. maskuta "blunt (of soft iron") 45), $k\tilde{o}r\tilde{e}$, $k\tilde{o}r\tilde{e}c'$, $k\tilde{o}r\tilde{e}t'$ "having the edge turned, blunt", korga "turned edge, crumpled, creased, blunt", korgo, korgot' "blunt, having a turned edge", M. bhokoto, bhokto "blunt". As for Pa. kuntha- "cripple", see s.v. khora-.

To the same word family belongs $k\bar{u}t\acute{a}$ - "not horned" (used of oxen, etc., since Ath. S.). Some scholars hold it to be identical with $k\acute{u}t\acute{a}$ - "bone of the forehead, horn" (see Walde-Pokorny, I, 433), but this word actually means "mallet, hammer", see Burrow, Transactions Philol. Soc. 1945, 92. The same scholar suggests to connect $k\bar{u}t\acute{a}$ - "not horned" with Tam. $k\bar{u}lai$ "that which is short", $k\bar{u}lai$ -k- $kit\bar{t}$ a "tailless he-buffalo", $k\bar{u}lai$ -k-kompan "an ox with blunt horns", Kann. $k\bar{u}le$, $k\bar{u}le$ "stump, stubble" (ibid., p. 95 f.). But cf. S. gutrut' "hornless, half-grown", gutra "short in stature, small, undersized", and, with a Proto-Munda prefix: S. atkura "childless, barren, heirless" t0 etc. Kui $g\bar{u}t$ a "a stump, stumpy, short, dwarfish" and $g\bar{u}t$ i "stumpy, shortened" must accordingly be loanwords, as the Austro-Asiatic origin of the S. words appears from Mon khut, $kh\bar{u}t$ "to be blunt, not pointed", kun "a dwarf, to be hump-backed" which may be connected with Mon sakut "to cut off, break off, omit.

⁴⁴⁾ See "Munda and Indonesian" (to be published in "Orientalistische Bijdragen").

⁴⁵⁾ Blending of wa-da (see bandá-) and ga-da.

⁴⁶⁾ Kui atkuna. id. (from Oriya).

to be cut off, to be scarce", thakut "to sever, be severed" (takut ā "to be cut off, severed"), tekut "to cut in lengths or pieces, a piece cut or broken off, fragment", pekut "to cheapen", kut "to cut off, amputate". S. koṭa "boy", kuṭi "girl" are probably to be derived from this root ("small" > "child", see s.vv. dimba-, śuṇṭhá-, baṇḍá-, etc.); Burrow, BSOAS. 11, 135, n. 3, suggests a Drav. origin, but cf. p. 50.

This explanation of $k\bar{u}t\acute{a}$ - is supported by the fact that the synonyms of $k\bar{u}t\acute{a}$ - are mostly of Proto-Munda origin, cf. $t\bar{u}par\acute{a}$ - "hornless" (: M. $tup\bar{a}$, tumpu "blunt"), Skr. $mun\dot{q}in$ - "hornless" (: S. $mun\dot{q}ra$ "having his hair shaved"), Pkt matta- " $sr\dot{n}gah\bar{\imath}na\dot{h}$ " (: Skr. $ban\dot{q}\acute{a}$ - "maimed, crippled"). Tam. $k\bar{u}lai$, Kann. kule, kule, are probably borrowings from Munda. See further s.v. khadga- "sword".

Note. By the side of matkuna- "beardless man" there is a different word matkuna-, m. "bug" (since Manu and Suśr.); cf. Hi. makhūn, Guj. mākan, Sgh. makuṇā, id. (and Hi. camokan, camūkan "louse, tick", < *carmamatkuna- according to Turner s.v. makunu), Pj. magnū "bed-bug". Both the connexion with Gothic mapa (Uhlenbeck, recently Specht, Ursprung der idg. Deklination 161) and the etymological explanation proposed by Pisani, ZDMG 97, 1943, 329 ($mrd-+Gr.\varkappa\omega r\omega w$) disregard the variants Skr. lex. kolakuṇa-, koṇakuṇa- "bug" (echowords from a root kon/kun), utkuṇa-, unkuṇa-, m. id. (Sgh. ukunā, m., ikiṇī, f. "louse", hence Tam. ukunam "bed-bug"), AMg. dhinkuna- (cf. dhamkuna-, dhemkuna-, m., Deśīn. 4, 14; Mar. dhekūn, dhekūn) "bug" 47), Skr. kuna-, m. "a parasitic insect" (cf. Tel. khunamu "an insect that is found in timber, and ingraves lines under the bark of a tree", Tam. kunu "worm, maggot"), kuṇin- "a sort of hornet" (thus pw.; kunī kanabhah Suśr.). Hence matka-"bug", recorded by lexicographical works as the Rajanighantu, must be due to a wrong analysis of matkuna-.

Although it is clear that the radical element of these words is kun-, its derivation is rather obscure. On the one hand, we find kiţibha-, m. "bug" (Hemac.), kina-, m. "woodworm" (Hārāv.), perh. connected with Kum. kino "an insect which adheres to the skin of cattle" (cf. Turner s.v. kirnu); their Austro-Asiatic origin is probable on account of Kh. tonken "bug", Mon sakit, tekit "bug", thekit "a bed-bug", kit, sakit "to bite" (cf. kemit "mosquito"?). On the other hand, Skr. kuna- "a parasitic insect" cannot be separated from ghuṇa-, m. "wood-worm" (Ṣaḍv. Br.), ghurghura-, ghurghurghā, gharghūrghā-, id. (lex.), which point to a root guḍ-; this may also be at the base of Nep. ghocnu "to pierce, prick, stab, perforate". The question as to the ultimate origin of guḍ- cannot yet be answered, cf. Tam. koṭṭu- "to sting as a scorpion, a wasp", koṭukku "sting of a wasp, hornet, scorpion"; Tel. kuṭṭu- "to prick, bore, pierce, sting", kuṭtu "a stitch,

⁴⁷⁾ According to Pischel, Gramm. der Pkt. Sprachen § 212 (cf. Bloch 341) < *damkhuna-("mit Umtreten des Hauches") en account of Mar. dakhnë "to bite" (< Skr. dams-).

a prick or puncture, piercing", Kui kuta "to prick", etc. Is matkuṇa-a Dravidian word with a Proto-Munda prefix added, like S. topoṇḍ (see p. 92)? But cf. S. aṭkuṭi "a prickly annual", Malto aṭkuṭi "thistles" (prob. Munda lw.). Connexion of kanabha-, m. "hornet" (Suśr.) is doubtful.

19. kubjá- "crooked, hump-backed".

1. First occurrence in Vāj. S., since Mhbh. Rām. in common use. No plausible explanation has been given hitherto. Some scholars derive it from *kubjhá- < *kubh-ko- on account of kubhrá-, m. "humpbacked bull" (Maitr. S.), while others assume IE. root-variation on a large scale (e.g. Persson, Beiträge zur idg. Wortforschung 104, n. 4, and 106, n. 3). Maurice Bloomfield, in a brief note entitled "On the Origin of the so-called Root-Determinatives" (Proc. Am. Phil. Assoc. 24, 1893, XXVII ff.) points out that "Just as kubjá- "hunchbacked" seems to betray in its final sound its congeneric relation to ny-ubja- "crooked-back", so also urubjá- "wide open" is the opposite of kubjá-. We have here a start in the direction of a suffix -ubja-, whose productivity is limited, however, by lack of opportunity" (Similarly Wackernagel, Altind. Gramm. II, 1, 12).

Santalí has numerous derivatives from a root ka-ba "bent, crooked", e.g. kabea kobea, id., kabua "stooping" 48), kob(r)e, kombe, hombe, hombe "crooked, bent", kumbet' "an arched, bent piece of bamboo or other suitable stuff, to bend, curve", hombo "to crouch, hide", ombak' "to bend down on all fours", K. homba "to bend down, stoop", etc. The native Munda character of these words appears from the vocalic variation, the change k > h > -, the aspiration k > kh in Pa. Pkt. khujja-, Mar. $khuj\bar{a}$ "dwarfish" (see Turner s.v. kujo), the consonantal interchange b:bh (Skr. $kubj\acute{a}$ -: $kubhr\acute{a}$ -), p:b (e.g. Nep. kupre, kubre "a hunchback", kupro, kubro "hunchbacked, deformed, bent"), and the nasalization (in Nep. khumle, khomle "bent", khumcinu "to be bent", Pkt. khummia-"bent"). Cf. also Khimi (Burman dialect) kabu "to fall down (prostrately)" 49), which is an Austro-Asiatic loanword like ang "to open the mouth", $s\ddot{a}ning$ "year".

Many of the Santali derivatives from ka-ba contain an additional element j, e.g. kabja "crooked, bent", kobjo "bent, stooping, crooked". Although word-derivation by means of suffixes must have been rather common in the Proto-Munda of the Yajur-Vedic period (see, e.g., khadga-, phalga-), it seems doubtful whether we may regard Proto-Munda

⁴⁸⁾ Cf. Beng. hāmlā "to be eager, fall down on all fours in eagerness", humṛi "a fall on one's face", humṛā "push through eagerness, fall face forward" (: hāmā "crawl", Chatterji, 405, 888 f.), obviously contaminations of two different words.

⁴⁹⁾ See R. Shafer, Khimi Grammar and Vocabulary, BSOAS. 11, 386 ff.

*kubja as a case of suffixation. When trying to analyse the Santali vocabulary we often encounter a particular difficulty: many words appear to contain the characteristics of two (or more) different roots so as to exclude a decision as to their origin. Thus we find S. kadbur, kudbur "to bow, bend head down", kadbuc', katbuc', kudbuc', kotbe, korbet', korbon "bent, crooked", karbun "lanky and bent, tall and stooping" and on the other hand kabrun, id., kubdha, kubdha "hump-backed, short-necked and roundshouldered", kumdhuc' "short-bodied (somewhat hump-backed), to crouch, to roll oneself up", kobre "crooked, bent". They may be derived either from ka-ba (with infixed or suffixed d) or from ka-da, a root which conveys the same meaning as ka-ba. In reality they rather represent blendings, in which the two roots have fused. It should be noted that, owing to the extra-ordinarily large number of homonymous roots in Munda, recourse has been had to several expedients in order to distinguish between the homonyms. Thus Munda has made a particular use of the "echo-words" (which are found on the whole area of Austric languages, in Dravidian, etc.) by combining dialectal variants of one and the same word, each of the components thus defining the other 50). The same tendency may account for numerous cases of "blending".

This explanation holds good also for $kubj\acute{a}$ -, as it cannot be separated from $k\alpha$ - $y\alpha$, e.g. S. kaya koyo, koyo koyo, $kaya\acute{n}$ $kuyu\acute{n}$, $kuyu\acute{n}$, $kuyu\acute{n}$, kijo, kij

2. Skr. $kubhr\acute{a}$, m. "humpbacked bull" (Maitr. S. 2, 5, 3) is generally considered an inherited IE. word (see Walde-Pokorny, I, 374, and the other authorities quoted above). But Hi. kubar = kub "a hump on the back", $kubr\ddot{a} = kubb\ddot{a}$ "humpbacked", Mar. kubad, $kubd\ddot{a}$, Guj. $kubd\ddot{u}$, adj. (see Turner s.v. kubro) and Mar. khubar "hump on the back" point to a cerebral. They cannot, of course, be derived from $kubhr\acute{a}$ - (as is also shown by their different consonants: b for bh, and partly kh for k), but they are independent younger borrowings from (Proto-)Munda. As such, they represent more faithfully the Munda original since they render exactly the Munda r, which in the Vedic language could only be represented by the phoneme r. It will be observed that Munda seems to have but slightly changed since the Vedic period (so far as its phonological aspect is concerned).

It follows that Ved. *kubhrá-* reflects a Proto-Munda **kubhra*, which is identical with S. *kubdhą* "humpbacked", quoted above.

3. A similar explanation may be suggested for kūbara-, kūbarī- "the pole of a carriage" (Maitr. S. 2, 1, 11, Kāṭh. S. 10, 5), Pa. kubbara-. In

⁵⁰) Cf. e.g. K. Wulff, Zs. f. Kolonialsprachen I (1911), 234 for possible Indonesian parallels, and Tedesco, JAOS. 65 (1945) 95, on Indo-Aryan identity-compounds.

older works on Indo-European etymology it was connected with Greek κυβερνάω "to steer", Lithuanian kumbrŷs "plough-handle", but the Greek word stands for *κυμερνάω (cf. Cyprian κυμερηναι) and if any relation between xvµεo- and kūbar- exists at all, this cannot be accounted for satisfactorily. R. Fohalle, Mélanges Vendryes 164 f., concludes a discussion of κυβερνάω with the words: "la racine peut être indo-européenne; le mot ne l'est pas" 51). Modern authorities are therefore inclined to separate both words, the more so as the long \bar{u} of $k\bar{u}bara$ is also an argument against their supposed relationship (see Walde-Pokorny I, 467; "vorläufig unklar" Wackernagel, Altind. Gramm. I, 184). As a matter of fact, Ved. kūbara- is identical with Hi. kūbar "a hump on the back", kūbṛā "humpbacked, crooked". (In Shahabad kūbar denotes a crooked beam, see Grierson, Bihar Peasant Life § 1260). Skr. kūbara- is accordingly a dialectal variant of kubhrá-; cf. also Pkt. kuhada- "kubjah" (Deśīn. 2, 36) from *kubhad. As for the meaning of kubara-, cf. S. kubet', kumbet' "an arched piece of bamboo", kārba, kārmba, M. karbā, Ho kābā, Kh. kārbā "plough-handle" (orig. "crooked", cf. Kui koți "plough-handle", from the well-known Drav. root kut- "crooked").

4. Kūrpara-, m. "elbow" (sometimes "knee"), Pa. kappara-, Pkt. koppara- present some difficulties. Kūrpara- belongs to the Class. language (Suśr. Bālar., Daśak. 63, 15 Agashe, Gopālakelic.). The following are some variants recorded by lexicographers: kaphoni-, kaphani- "elbow", kuphaṇī-, id. (Hemac. Uṇādigaṇasūtra), kapolī- "knee joint"; perhaps kapola-, m. "cheek" (since Rām. Suśr. Yājñav.) is connected. There are more instances of one word denoting both the arm and the knee joint, e.g. S. thore "the ankle, the elbow joint, the knee joint". The primary meaning of such words has prob. been "bend", which excludes the connexion of kapola- with kapála-, n. "shell, potsherd, skull" (Pet. Dict., Solmsen, Beiträge zur griech. Wortforschung 198, PTS. Dict.). It is fairly certain that kūrpara-, kapolī-, etc. are Proto-Munda words 52). As a matter of fact, Tam. kopparam, Tel. kopparamu "elbow" and Tam. kavul, Mal. kavil "cheek, temple of an elephant" 53) may easily be explained as loanwords. It is however hard to decide whether we have to analyse ka-ba+suffix da (or na) or prefix ka(r) + root pa-da, since all the words quoted have a similar element -da- (-na-) in the third syllable; cf. perhaps also Ved. kaphodá- (v.l. kaphaudá-, kaphedá-, kaphaujhá-) in Ath. S. 10, 2, 4 ("elbow"?). If Bloch 317 is right in connecting kaphani- "elbow" with Pkt. khavaa-, m. "shoulder" (skandhaḥ Deśīn. 2, 67), Hi. Pj. khawā "shoulder.

王

 $^{^{51}}$) As for Lith. $kumbr\~ys$, its prim. meaning is "protuberance" (cf. e.g. Petersson. Stud. über idg. Heteroklisie 75).

⁵²) Impossible is the connexion with O. Pruss. *klupstis* "knee" (Scheftelowitz, KZ. 53, 257). Burrow, Transact. Philol. Soc. 1945, 96, derives *kūrpara*- from Dravidian.

⁵³⁾ Ramaswami Aıyar, Ojhā-Volume 16, questions the derivation of kavul from kapola-.

shoulder-blade", Guj. khabho, Mar. khawā "articulation de l'épaule", this point would be decided, but the meaning "shoulder" is rather different (cf. Kann. koppara "shoulder-blade"? Meaning uncertain). Nevertheless, in the absence of decisive materials, it may be suggested as a working hypothesis that the original forms $k\bar{u}$ -r-p-ar, kap-od (kap-ol), kap-on are identical with $k\bar{u}$ -ad (in $k\bar{u}$ bara-, etc.). The connexion of Skr. kapola-"cheek" is doubtful. It has also been compared to Sakai $kap\bar{o}$, Semang $k\bar{a}po$, Nicob. $tap\bar{o}a$, etc., which excludes the former explanation kap-1.

20. kuling a- "the fork-tailed shrike".

Attested in Mhbh. 1, 61, 9 Bomb. (1, 55, 8 Poona has a different reading), Vāsavad., Bhāg. Pur.; gṛhakuliṅga- Suśr., femin. kuliṅgī- Bhāg. P., kuliṅgaka- "a certain bird of prey", Caraka. Moreover the form kaliṅga- is recorded by lexicographers and (as a false reading) by Nīlakaṇṭha in his commentary on Mhbh. 1, 61, 9. A different sense has kuliṅga- "sparrow" (Bhāvapr., lex.) beside which kuliṅgaka-, kuliṅkaka-, guliṅka- are recorded (lex.). Cf. Pa. kuliṅka-, kuluṅka- "a small bird", Tam. kaliṅkam "sparrow" (lex.).

Schmidt, MKV. 88, while connecting Nikob. kalān "white bellied seaeagle, Cuncuma lemogaster" with Khmer khlen, Stieng. klin "kite", points to Skr. kalinga-. It is however very improbable that the Khmer word should have been borrowed from Sanskrit as we find the same word in Khasi, viz. khlīn "kite, eagle", with the "compositional form" līn which is used for it in certain circumstances 55). It can hardly be doubted that Skr. kulinga-, kalinga- reflects the Proto-Munda equivalent of the words quoted. The only difficulty lies in the fact that several lexicographical works (Trikānḍaśeṣa, Hemacandra and Medinī) mention a word kalikāra- with the same sense. Since *kalika- can hardly be connected with kulinga- it must be a different word (cf. kulīkā- "a certain bird" VS. 24, 24, lex. kālīka- "ardea jaculator"?).

It seems reasonable to derive the name of the people of the Kalingas (who were settled on the Telugu coast from the Kistna to the Mahānadī, see Pargiter, JAS. Beng. 66 [1897], p. 98 f., Hobson-Jobson, s.v. Kling) from the name of this bird, which then must have been the totem of a Proto-Munda tribe living in that country. S. Lévi has already envisaged this possibility in his article in the Journal Asiatique 1923 II (= Pre-Aryan and Pre-Dravidian in India, p. 100), but prefers to connect kalingawith Tibetan glin, Telugu lanka "island". Although the Kalingas dwelt in a region that was rich in islands and where, moreover, the Telugu word may have been in common use, his conclusion is not cogent.

⁵⁴) S. K. Chatterji, Pre-Aryan and Pre-Dravidian in India, p. XXII, Kuiper, Acta Or. 16, 304; see also Ramaswami Aiyar, Ojhā-Volume, p. 15 f. Cf. Bahnar bŏ, id. (Schmidt, MKV. 86).

⁵⁵⁾ Roberts, Simplified Khassi Grammar, p. 6.

S. Lévi (engl. transl. pp. 80 and 100) and Przyluski, J. As. 1926 I, 5 n. 1, further compare bhulinga- which is the name of one of the tribes of the Sālvas, and of a certain bird, cf. bhulinga- (Manm. II, 6a: Tam. pulinkam "sparrow"), bhūlingaśakuni-, bhūlingaśakuna- (Mhbh. 2, 41, 18 and 44, 27 f., 12, 169, 10). This connexion may be correct, though it should be noticed that the word ku-linga- was in use all over the Austro-Asiatic area, whereas bhu-linga- is isolated. Cf. Mon klain "eagle", Khmer khlēn, Bahnar klan "aigle pêcheur", Semang Bukit kĕlān "whiteheaded eagle", Tembi klaakn, Senoi kĕ-lākn, Sakai cep kĕlak "eagle kite", Central Sakai klāk "hawk", klān-blok "roc, garuda", cīm-klāk "hawk, eagle", Achinese klēn "kite", Malay lan (older form hĕlan) "eagle, kite".

21. kuvinda- "weaver".

A late and rare word, cf. Brahmavaiv. Pur., Kathās. (Pet. D. s.v. kamsakāra- and Add. to vol. V), S'ankara on Bādar. (pw), Yaśastilaka (Schmidt, Nachtr.); cf. also Sāhityakaum. 7 (p. 71) deva, tvam asi kuvindaḥ paṭayasi ca guṇān pratikṣaṇam citrān, etc. The form kupinda-(Uṇ. 4, 87) points to kubinda- (with unvoicing of b indicating a foreign origin).

In Acta Orient. 16, 305 I have connected kuvinda- with S. bindi "spider" on the supposition that its original sense has been "weaver". In AO. 17, 315 ff. attention was drawn to Kuvinda- which occurs in the Gopālakelicandrikā as a tribal name (Ābhīrā Yavanāḥ Kuvindaśavarāḥ) 56). Its exact form (Kuvinda-, as Caland writes it, or Kubinda-) could not be determined as the Leyden MS. as a rule uses the akṣara va for both ba and va. But Kuvinda- also occurs several times in the Bhāratamañjarī as a designation of an aboriginal tribe, cf. 7, 394 S'akān Muṇḍān Kuvindāṁśca (corresponding to Mhbh. 7, 119 where only Kirātas are mentioned, but cf. 7, 121, 14 and 43: Kulinda-, ed. Bomb.); 2, 114 Kuvindaviṣayaṁ jitvā (: Mhbh. 2, 26, 1 Kulindaviṣaye). Whatever may be the correct reading, Kṣemendra's work confirms the conclusion drawn from the Gopālak. Cf. also the comm. on Sāhityakaum.: kuṁ pṛthivīṁ vindatīti kuvindo rājā jātiviśeṣaḥ tantuvāyaśca.

It has been suggested (AO. 17, 316, n. 1) that the Kuvindas were a caste of weavers with totemistic relations to the spider. But other professional castes could equally claim the spider as their totem. In a study on Orissan ethnology (JBORS. 19, 1933, 333) it is stated that "the Tiyar fisherman has the fishtrap (bājākāṭhi) for his Santak", whereas "the fishing caste of Kewaṭ has for its Santak the saringā which is a shuttle for weaving fishing-nets". In fact, just as the spider catches its prey with the cobweb it has woven, so the fisherman has to use his net. Hence the modern Binds (once mentioned in the Vāj. S. as baindá-), a caste of

⁵⁶) Stieng ben and Besisi bön are nasalized variants of bih and cannot accordingly be connected with S. bindi, M. bind-ram, Kh. bendi.

fishermen and cultivators ⁵⁷), owe their name to their net (Sāyaṇa bindur jālaṁ tena jīvatīti baindaḥ!). Similarly jālika- means "fowler" and "spider" (Böhtl.).

A parallel instance is kaulika- "weaver" (Pañcat.), kolika-, id. (Yaśastil.). These apparently reflect a word *koḍika-, which is preserved in Tam. kōṭikam "cloth", kōṭikar "weaver". Like kuvinda-, *koḍika- is connected with a word for "spider", cf. Skr. markaṭa(ka)-, markaṭī-, markaḍikā- "spider", markaṭavāsa- "cobweb", Pa. makkaṭaka- "spider", makkaṭa(ka)-sutta- "spider's thread", Pkt. makkoḍā- "spider" (Deśīn. 6, 142), makkoḍa- "a heap for stringing together by a machine" (ibid., see Turner s.v. mākuro "spider"), kolia- "spider" (2, 65). As for Mar. koļī "spider" and Si. korī "weaver, spider", see however A. Master, BSOS. 9, 1009 f.) 58).

We may suppose that the *kodika originally were a tribe which had a spider-totem. In view of Pkt. makkada-bandha- "a chain worn over the shoulder" (Tam. makkattu "waist-band"), the original sense of the root element kat-, kod- may be supposed to have been "to twist". If this is correct, the word for "spider" may further be connected with Skr. kata- "a straw mat", kaṭaka- "id., cord, string, bracelet" (see s.v. śṛṅkhalā-).

22. kokila-, m. "lighted coal" (Lex.).

This word is only recorded in the Trikāṇḍaśeṣa. Cf. Pkt. koilā-, "charcoal" (kāṣṭhāṅgārāh, Deśīn. 2, 49), Hi. Nep. etc. koilā, id. Bloch, p. 316, compares it to Pkt. kouā- "fire of dry cowdung" (karīṣāgniḥ, Deśīn. 2, 48), and connects these words with Mar. koṭājṇē "to burn", etc. (Skr. kuḍi- "dāhe"), whereas Chatterji 404 takes it as meaning "cuckoo-coloured". The latter and Turner (s.v. koilā) derive the NIA. words from a Middle Indian original *koilla-.

The Santali word corresponding to Hi. koilā is kuila (cf. M. koilā, kuilā, K. $k\bar{o}ly\bar{a}$). Although this is probably an Aryan loanword, it cannot be separated from S. koya, kuya "black, smirched", kuila "black, darkskinned", and the other words quoted s.v. kajjala-. That words for charcoal have actually been derived from the root $k\alpha$ -ya "black" is shown by Skr. lex. ajjhala-, m. "charcoal" (Trikāṇḍaś.), which is obviously a dialectal variant of kajjala- (with loss of initial h < k as in $\bar{a}vila$ -). Kokila- is accordingly the Sanskritized form of Pkt. $koil\bar{a}$ - (from Proto-Munda *ko(y)ila = S. kuila), which has been created on the analogy of Pkt. koila-: Skr. kokila- "cuckoo".

23. k h a d g a -, m. "sword".

1. Since Mhbh., Rām. Neither the connexion with Greek φάσγανον, nor that with Old Irish claideb "sword" is plausible. On the last word,

⁵⁷⁾ See Acta Orient. 17, 307 ff.

⁵⁸) So. kukkúdi-yań "spider" is ambiguous on account of its synonym tuttúdi-yaň.

see J. Vendryes, Mélanges de linguistique offerts à M. Ferdinand de Saussure (Paris 1908), pp. 309—321, and H. Pedersen, Vergl. Gramm. der keltischen Sprachen II, 29; as for khaḍga-, cf. Wackernagel, I, 170, Vendryes 309 f. The origin of khaḍga- is still obscure and its structure does not confirm the idea that it is inherited from prim. Indo-European. A variant *khaṇḍa- (cf. Tam. kaṇṭam "sword" in the lexicographical work of Piṅgala) has left some traces in NIA., cf. Hi. Beng. khāṭā, Guj. khāḍū, Panj. khaṇḍā, Mar. khāḍā, Gypsy xanró (see Turner s.v. khāṭo). Bloch 318 observes that only the first element of these words recalls khaḍga-, and supposes the nasal to be due to a contamination with the word-family of khaṇḍ- "to break". As it seems reasonable to suppose some connexion between this root and the word for "sword", we shall first have to examine more closely the derivatives from this root.

Skr. khanda- "broken, crippled, defective, not full (moon)" Mhbh. Rām. etc.; m.n. "break, fragment, piece, part, section (of a book, Ait. Ar., Kena Up.), sickle (of the moon)", khandaka-, m. "piece, part", khandikā-, f., id. (Kāś. on Pāņ. 3, 4, 51; see Schmidt, Nachtr.) are usually connected with kāṇḍa- (see below) and with Lith. skéldėti "to burst" (Fortunatov, Lidén, Studien zur altind. und vergl. Sprachgesch. 88 with bibl., Petersson, Studien zu Fortunatovs Regel 46 f., 51, 53, Walde-Pokorny I, 436 with bibl.). The inferential form IE. *kolndo- cannot however be correct as there is a variant with g, cf. ganda- "section, piece, trunk" (Divyāvad., Kathās.), gandikā-, f. "piece" (Divyāvad.). Owing to the false premise that khandais an IE. word, no attention has been given to these variants although in the Addenda to the shorter Pet. Dict. (VII, 337) it is expressly stated that ganda- is identical with khanda-. Cf. Nep. girnu, gernu "to cut into pieces, kill". Further derivatives are khandayati "breaks or cuts to pieces, divides, dispels, hurts, wounds, destroys, interrupts, violates, etc.", khandila- "a small section" (Mān. GS., Harṣac.), khaṇḍalaka- "a small piece" (Harşac.), khandiman-, m. "fragmentary state", lex. khada-, m. "splitting". and kharvayati (kharvita- Kathās. 51, 1, Gopālakelic. 43, 17). Beside khandayati the Dhātup. records khundayati, khodayati (cf. khurati "chedane, khandane, ksore").

The various phonetic changes, which these words presuppose, suggest a Proto-Munda, rather than a Dravidian, origin. As a matter of fact, modern Munda has a great many words which must be traced back to a root gα-dα "in pieces", e.g., S. guṇḍa, guṇḍa guṇḍi "fragments, remnants, small bits, to make into do., to grind" (cf. M. guṇḍā "crumbs", Mark 7, 28), gaṇḍa guṇḍa "fragments, crumbs, to break into do., to grind small" (cf. Tel. gandarulu "fragments, bits", a loanword), guṇḍuc' "excrements (in small quantity)", giṇḍra "a piece, bit", kuṭra "a fragment, bit, piece, to cut into pieces, divide", kaṭra kuṭra, kuṭra kuṭra, kuṭra muṭra "bits, fragments, small pieces, to divide, cut into pieces", kuṭri kuṭri "in small divisions", kiṭra "fragment, piece, to divide into pieces", kaṭi kuti "in

pieces, to cut into do.", khaṇḍa khạṇḍi, khaṇḍa (k)huṇḍi "to cut into pieces", khiṇḍi huṇḍi, khini khudri (huḍi, huṇḍi) "to tear into pieces", kheṇḍec' bekrec' "scattered, in small pieces", K. kūdkā, kuṭkā "piece, bit, crumb", kūdkā-kī "to break into pieces", Kh. kūṛā "powdered".

Skr. khadga- is formed with the same guttural suffix as, e.g., phalgú-"weak", phalgú- "reddish", khadgá- "rhinoceros". This morphological detail excludes an etymological connexion with Tam. kaṭi- "to cut into pieces", kaṭṭu "section, part" (unless these Dravidian words are borrowings from Munda). As for Skr. bṛgala-, n. "morsel, piece, fragment" (ardhabṛgalá-, puroḍāśabṛgalá-, S'at. Br.), its variants vṛkala-, n. (S'at. Br. Kāṇv., see Caland, Introduction 55), vṛkala-, m. (Baudhāyana) 59) rather suggest a root wa-ga, than gala- with prefixed bṛ-; cf. perhaps S. bhưṅgạr "a block, piece of wood, to cut into pieces", bhuṅgrau "to cut off, hack, chop", etc. The supposed connexion with Goth. brikan "to break" (Persson, Beiträge zur idg. Wortforschung 36, n. 1) is in any case fictitious.

By the side of khaṇḍī-kṛ- there occurs a variant kaṇḍī-kṛ- "to pound", which shows the common Munda variation of aspirates and non-aspirates. Hence kaṇḍana- "pounding" (Harṣac.) "the thrashing, husking, husk, chaff", kaṇḍanī- "mortar" must have the same origin as khaṇḍa-; cf. S. guṇḍa guṇḍi "to grind", etc. I venture the supposition that Skr. káṇa- "a small grain or single seed; flake. drop, spark, atom, a bit" is also a derivative from this Proto-Munda root. For the semantic development cf. Latin grānum: Skr. jīrṇá-, and Russ. pšenó: Skr. piṣṭá-. This explanation is no doubt preferable to the derivation from IE. *sqel- "to split off" 60). Skr. kalā- "small part" is ambiguous.

Proto-Munda ga-ḍa "stunted, short, dwarfish, small, blunt, dull" is a parallel root to $d\alpha$ - $d\alpha$ (see dandá-) and $w\alpha$ - $d\alpha$ (see bandá-). As will be pointed out in the discussion of these words, these roots show a striking parallelism both in their semantic development and with respect to morphology. Since neither of these parallel roots means "to cut into pieces", this root ga-da must be distinct from its homonym discussed above; cf. Skr. kuntha- "blunt, dull" (p. 40 f.), which cannot be derived from a root which means "in pieces". Parallel to dandá-, the NIA. languages have some variants of a word for "stick, log", e.g. Hi. gerī, gerī "stick used in a game", Nep. gir "stick", gir "log, block of wood", Kum. gino "block, log". Cf. Skr. ganda-, m. "trunk of a tree" (Divyavad.), Pa. gandī-"stalk, sugarcane-joint", and Pkt. giddia- (to which Turner refers) and see s.v. laguda-. Vedic khṛgala- seems to be composed of the wellknown prefix ker-, kar- and gala-. If the meaning "stick" is correct, it may represent the same word, cf. khṛgaleva visrasaḥ patam asman "like two sticks save us from fall" RS. 2, 39, 4 (thus Roth, Bloom-

⁵⁸⁾ Scheftelowitz, KZ. 53, 261, compares Greek $\ell \bar{\eta} \xi \iota s$ (from $\ell \bar{\eta} \gamma \nu \nu \mu \iota$), but the variation g/k rather suggests a foreign origin.

⁶⁰⁾ Kaṇati "becomes small" (aṇūbhāve Nir.) may have been deduced from káṇa-.

field, SBE. 42, 340). Tarapada Chowdhury, JBORS. 17, 1931, 67, assumes the same meaning for AS. 3, 9, 3 on account of the Kauś. S. but this hymn is "one of the most perplexing in the AV." (Bloomfield). Fairly certain is however the appurtenance of Skr. poganda- "young boy" (apoganda- "boy of 16 years or older" Manu), "deformed in body", (Yaśastil., = "vikalāṅgaḥ" according to Amara 2, 46, 46, Halāy. Abhidhānaratnamālā 2, 232), and Nep. pogaṭā, pohoṭā "ears of rice with no grain inside" 61), phokat "worthless thing or person". Cf. furthermore the following rare Skr. words with the meaning "dwarfish, stunted": khaṭa- (khaṭākhu- = bālamūṣikā, Haravijaya), khaḍara-, khaḍūra-(Yaśastil. comm.), khattura- (Yaśastil.), khattara- (Ksīrasvāmin ad Amara 2, 6, 46), khattana- "dwarf" (lex.), khudduka-, khuddaka- "small", and khanda- in the sense of "crippled, defective", kharva- "mutilated, crippled, imperfect" (Taitt. S.) 62), "minute, low, vile" (lex.), nikharva-, id. (Hemac., Kṣīrasvāmin l.c.), kharvita- "dwarfish", kharvī-bhū- "to become small, crippled", kharvati "hrasvībhavati". Instead of the usual derivation from IE. *kolbo- (Greek κολοβός, see Walde-Pokorny I, 436), kharvámust be traced back to a Proto-Munda original *kadu-a.

Cf. S. guṇḍrạ "a stump, chip, a maize-cob with the covering leaves removed, child, to strip, chip off, amputate, cut into pieces" (contamination with I ga-ḍa), giṇḍra "a piece, bit, small children, to chop, tear off (cloth), to cut into pieces" and geḍa, geḍma, geḍra, geḍok', geḍmec', geḍrec' "short, small, puny, stunted, dwarfish", galae "minute, tiny, very small (children)", keṭmer, keṭmber "short, stunted", gaḍha guṛḥa (gaṛha guṛḥa) "small, tiny", gaḍma guḍma, gaḍrac' guḍruc', id., keṇḍel, keṇḍle "short, of small size", K. gandā, gaṇḍā "boy", S. M. koṛa, Ho koa "boy, young man", S. M. kuṛi "girl". S. koṛa is a parallel formation to *śoṛa (Hi. chorā, Skr. kiśora-) from ḍa-ḍa and Hi. poṭā, id. from wa-ḍa. Hence Panj. kuṛī "girl". But Skr. kuṇaka- "a young animal just born" may perhaps be a Drav. word (Burrow, BSOAS. 11, 135 n. 3). A similar contamination as in Skr. khaṇḍa- is also found in S. gaṇḍra guṇḍra "1. small, stunted, puny, to make do.; 2. to break into pieces" (cf. gaḍar guḍur "small", gaḍac' guḍuc' "small, undersized, tripping", etc.).

3. Skr. kāṇḍa-, kāṇḍá-, m.n. (since Ath. S.) "1. section, part, internode (of a plant), chapter (of a book); 2. stalk, stem, switch, cane, arrow" presents serious difficulties. The incidental use in the sense of "mass, multitude" (Gramm., S'iś., Vikramāṅkad.) is probably due to a confusion with khaṇḍa- (s.v. gaṇa-), see Renou, Journ. As. 1939, 386. Bye-forms with g are gaṇḍaka- "having joints", Pali gaṇḍa- "a stalk, shaft". 1. Kāṇḍa- "internode" is a Dravidian word (in spite of the IE. etymology

Also pabață, pawață, pauță, perhaps from pa + ba-da? Such rhyme-words from parallel roots are rather frequent. For the meaning of phokat cf. daūțhe (p. 78).

⁶²⁾ Cf. vikalāngas tu pogaņdah kharvo hrasvas ca vāmanah. Amara 2, 6, 46.

proposed by Fortunatov, see Wackernagel, Altind. Gramm. I, 170, etc.), cf. Tamil kan "joint in bamboo or sugar-cane, connection between a bough or flower and its stem, bamboo", kanu "joint of a bamboo, cane, bamboo, knuckle, joint of the spine", Telugu ganupu "a joint of the fingers or toes, or in a sugar-cane, etc.". In view of Tam. kaṭṭu "class, section" it is not quite certain that the meaning "section, chapter" of the Skr. word is merely due to a semantic development of "piece, fragment". 2. Kānḍa- "stalk, stem, cane" is prob. a different word (in spite of Tam. kaṇu "cane, bamboo"), which is, like Pa. gaṇḍa-, id., derived from ga-ḍa (§ 2, cf. khaṇḍa- "stalk" in vilvakhaṇḍo Mhbh. 13, 7414 Calc. "einen Stab von V. holz habend" (?) = bilvadaṇḍī Bomb. 13, 159, 14). Tamil kali- "to cut off, pare off, prune", kali "rod, cudgel, staff, stick", kalai "spiny bamboo, pole used for propelling boats, sugar-cane, stem of do., shaft of a bamboo", Telugu gaḍa "stick, staff, stalk, cane, pole", etc., may just as well be Munda loanwords as Tam. taṭi, tanṭu, id., are (see p. 79).

4. Skr. khaṇḍaka- "sugar-candy" (Rājanighaṇṭu), khaṇḍa- (Sāh. D.), khāṇḍava-, m. (Mhbh. Rām.) "sweet-meats", which Bloch, p. 318, identifies with khaṇḍa- "piece" (cf. Mar. khāḍ "cassure, morceau, sucre") are prob. also Dravidian words although their meaning may secondarily have been influenced by khaṇḍa- "fragments", cf. khaṇḍa- "Zucker in Sandform" (Bhāvapr., Kālac.). They cannot be separated from Tam. kaṭṭu- "to harden, condense, coagulate, to swell as a boil, a tumour", kaṭṭu "a boil, abscess, tumour", kaṭṭi "clod, lump, concretion, anything hardened, coagulated, jaggery, coarse palm-sugar; boil, abscess, tumour", kaṇṭu "clod, lump, sugar-candy, rock-candy" (which the Tam. Dict. derives from Skr.), kaṇṭil "candy", Telugu gaḍa "a lump, clod", gaḍḍa "lump, mass or clod, anything bulbous, boil or ulcer", Kann. gaḍḍe, etc. (cf. Skr. gaṇḍa- "boil, pimple, crop", gaḍu- "excrescence on the body, as goitre, hump, etc.", gaṇḍu- "pillow", kanda- "bulbous root, bulb", kanduka- "playing ball, pillow", = lex., Pa. genḍuka-, id., etc.).

24. khalati- "bald-headed".

Since Vāj. S., Taitt. S., S'at. Br. With -ll-: khallaka- (Galanos), khalliṭa- (S'abdaratnāv.), khallīṭa- (Trikāṇḍaśeṣa). Another Yajurvedic word is kūlva-, átikūlva- "too bald" (see Vedic Variants II, 267), which however is an IE. word, cf. Avestan kaurva-, Latin calvus, etc. (e.g. Walde-Pokorny I, 447). With the last word is generally connected kālvālīkṛta- "quite bald" (of the earth, Eggeling, transl. of S'at. Br. 2, 2, 4, 3), which however cannot well be separated from class. Skr. khalvāṭa-"bald" (Bhartṛhari). Specht, Der Ursprung der idg. Deklination 256, holds the aspirate kh- in khalati- to be due to the "besondere Gefühlbetonung" and compares kharvā-, khara-, khaṇḍa- and khora-, names of corporeal defects.

In reality, all these words, except for -kulva-, are of Proto-Munda origin. Just as a great many derivatives from da-da denote "bare, bald", e.g. dundge, cadra, dhendra, cenden', thandgat', thundga, etc. (see s.v. danda-), and munda- "bald-headed" is derived from wa-da (see s.v. baṇḍá-), so khalatí-, etc. are derived from ga-ḍa, cf. S. kolo "shaved bare, to shave bare", holat' "razor". The a of khalvāṭa- may stand for o, and v suggests an original *kolo-a (cf. malvá-, phalgvà-). The cerebral appears in Skr. lex. khanda- "a calf with half-grown horns" (Galanos), matkuņa-"a beardless man, elephant without tusks", matkuņā- "pudendum sine pube". Cf. S. hender "bare, exhausted", hendket' "bare, denuded", hendra "bare, hairless, featherless" (rhyme-word of dhendra), hutur (K. utur) "bare", khad "bare, leafless", khadea "id., hairless, scabby", khadga "bare, leafless", khadra "bare, leafless, hairless, skin and bones, stripped", khal "to flay, skin, rub off (skin, surface)", ghal ghalao, (Campb.: khal khalao) "to skin, flay, make bare", khadgu "bare, leafless, without branches, without feathers or hairs", etc. Perhaps S. hoyo, hoyon "to shave" (M. Ho hoyo, K. köyö, Kh. koy) belong to this affiliation ($y < \dot{q}$). Other words for defects are kāṇá- "one-eyed" (RS., Ath. S., Taitt. S.), kadá-, kalá- "dumb", kanva- "deaf" (lex. also kalla- and barkara- "deaf", kalya- "deaf-mute"); cf. S. kārā "blind", Ho galā "dumb", S. M. kala "deaf". Root ga-da "stunted, defective" (p. 49 f., cf. Skr. badhirá-, p. 102) which is prob. identical with $ga-\dot{q}a$ "bare" (: Hi. $g\tilde{a}j\bar{a}$ "bald-headed" and see p. 96).

25. khinkira-"fox".

Only in lex. works. In addition to this word, the synonyms *khikhi-* and *kikhi-* are recorded. The relation *khikhi-*: *khinkira-* points to a non-Aryan origin. Since Gondi *khekṛī*, id. is isolated in Dravidian and, accordingly, likely also to be a loan-word (v. Ramaswami Aiyar, Journ. Andhra Histor. Res. Soc. 10, 71), the source of origin of these words must be (Proto)-Munda ⁶³).

Cf. S. khikṛĩ "the Bengal fox, Vulpes Bengalensis" (in the sense "lean, thin, meagre", it is prob. a different word), K. kīkrī, kikeri, kēkri, kekṛĩ. The exact source of H1. khīkīr is not clear. The root is apparently *khiḍ, whence the derivatives *khin-khiḍ, *khi-khiḍ and, with nasalization of the final ḍ, *khin-khiṇ (in Pkt. khinkhiṇĩ- "śṛgālĩ", Deśīn. 2, 74). The syllable-ra- in khinkira- accordingly forms part of the root (-kiṛa- < kiḍa-) and khikhi-, kikhi- must be inferential forms deduced from *khikhira- (as karka- from karkara- "mirror", dundu- from dundubhi- "drum", etc.), unless khikhi- stands for *khikhiyi (y < r, ḍ, cf. p. 134).

26. khora- "lame, limping" (Kāty. S'S, Lāty., Gaut.).

Also khoṭa- (Gaut. 28, 6, v.l.), khoḍa- (comm. on Yaśastil. II, 202, 4), kuṇḍa- "crippled, lame" (Mahāvy., see Schm. N.). A derivative is khoraka-

⁶³⁾ What is keko in Kui keko bilo "fox" (bilo "jackal")? Tuttle's connexion of Gondi khekṛī with Tulu kudike "fox" (Dravidian Developments 22) is hardly correct.

"a certain disease of the feet" (paśūnām pādarogaḥ, Nīlak. on Mhbh. 12. 283, 53). Grammatical and lexicographical works moreover quote the following forms: khola- = khoḍa- "limping", khoṭati, khoḍati, khorati, kholati "limps" (gatipraghāte, khoṭane, Dhātup.), kunṭhati "gatipraghāte", kunṭati or kunḍati "vaikalye", khunḍate "khañje". The last variants are only recorded by Vopadeva (see Pet. D); since they are wanting in the Pāṇinīya Dhātupāṭha, they must have been introduced at a later date.

Following a suggestion of von Bradke's several scholars connect khorawith Greek σχαῦρος (thus Walde-Pokorny II, 538; otherwise Uhlenbeck, who compares khúra- "hoof, claw", and Feist, who connects it with Lat. claudus), on the assumption that khoḍa- and khola- are irrelevant. But Pa. kuṇṭha-, Pkt. khoḍa- "lame", khuṇḍayaṁ (khavaḍiaṁ) "stumbling" (Deśīn.), Mar. khoḍ, Guj. khoḍū, Beng. khōḍā "lame", Tel. kunṭu- "to limp, to be lame" show that r stands for a cerebral 64). Since Skr. ḍ never becomes r (v. Lüders, Phil. Ind. 555) 65), khora- must represent a Proto-Munda original *khoṛa.

The following Santalı derivatives from ka-da all signify "lame, limping": kadua, kaduc' kaduc', kadac' kuduc', kidoc' kodoc', kadak' kodok', kodok' kodok', kadun'kot' kadun'kot', kuda, kadguc', karat' koret', kurcet', kordha, korha, kordhet', kordhet', khôrea, khôret', khôredet', khorda, khorha, kherdo, kherdok', hadac' huduc', hutet', huret' huret', hurjan, hurjet' hurjet', hurtan, etc. Pa. kuntha-, kentha- "cripple", which we have here connected with khora-, is usually regarded as identical with Skr. Pa. kuntha- "blunt" (cf. e.g. Wackernagel, Altind, Gramm, I, 170). As a matter of fact, the meaning "cripple" may ultimately be based on a prim, meaning "defective", see Turner s.v. kūrinu "to be blunted".

A different word apparently is Skr. kuṇi- "lame in the arm". The restriction to the hand or arm is unequivocal, cf. Mhbh. 12, 33, 7, where kuṇi- (hastavikalaḥ Nīl.) is opposed to paṅgu- (pādavikalaḥ), and Kāśikā on Pāṇ. 2, 3, 20 (pāṇinā kuṇiḥ, v.l. kuṇthaḥ), Pa. kuṇi- "deformed, paralysed, only of one or both arms (or hands)". Tam. kuṇi "that which is lame, a person with a withered hand or useless arm". The connexion with Greek zvìlós. though sanctioned by tradition 66), and with the obscure Vedic epithet kúṇāru- 67) may be passed by in silence. The

⁶⁴) Leumann, Etym, Wb., and Petersson, Studien zu Fortunatovs Regel 4, rightly derive khora- from khoda-.

⁶⁵⁾ For the Pkt. instances quoted by Pischel § 241. see Luders, Philologia Indica 559 f.; cf. also karasī, purabheyaṇī, etc. (Pischel § 238 and § 245) and Pa. ekārasa-, crisa-(Geiger § 43).

⁶⁶⁾ Thus Fortunatov, accepted by Uhlenbeck, Petersson, Stud. zu Fortunatovs Regel 4, 8, Boisacq, Dict. étym. de la langue grecque, s.v.

⁶⁷⁾ Roth connected it with kuni-; see Neisser, Zum Worterb. d. RV. II, 60.

original meaning of kuṇi- (or koṇi-, Lex.) was "distorted, crooked", cf. Pa. kuṇḍa-(daṇḍaka-) "bent, crooked", kuṇṭha- "bent, lame, blunt, a cripple" 68), kuṇa-, kuṇṭta- "distorted, bent, crooked, lame". The combination of these meanings, which is but rarely met with in the derivatives from Proto-Munda ga-ḍa (ka-ḍa), e.g. koṇḍec', koṇḍet' "bent, crooked, twisted (a little)", is very common in Dravidian, cf. Telugu kuniṣṭi, kunuṣṭu "crooked, crippled, lame, cross", kuniṣṭi, kanuṣṭu "crookedness, obstacle, impediment", gūni, kūnī "crooked", gūnidi "a cripple", gūnu "a hump, a crooked-back, a vessel, pot", kutanuḍu "a deformed cripple, a name of Kuvera", kuṇṭi "lame, crooked", kuṇṭu "lameness, crookedness", Tamil kōṇu- "to be awry, crooked, oblique", kōṇal "wryness, obliquity, deflection, hump, deformity".

Just as the Munda origin of khora- is clearly indicated by the phonetical development k > h, so the native Dravidian character of these words is probable on account of the ablaut $u:\bar{o}$, cf. Tel. gundi "corner": Tam. $k\bar{o}tu$ -, $k\bar{o}n$ -, kunaku- "to be bent or crooked", $k\bar{o}tu$, $k\bar{o}n$, kunaku- "crookedness", $k\bar{o}ttam$, $k\bar{o}nam$ "curve". We must perhaps exclude Tel. kuntu- "to limp, be lame" and kuntagincu- "to limp, halt", which may be borrowings from Munda.

If this conclusion is correct, kuṭa "kauṭilye" and kuṭi "vaikalye" (Pischel § 232) are not identical, and in Pa. kuṇṭha- "bent, lame, blunt" the derivatives of a Dravidian and a Proto-Munda root must have been fused.

27. g a n á -, m. "troop, crowd, flock, number, series, etc."

Since RS. Generally derived from IE. *ger- "to assemble, collect", (Greek ἀγείρω, etc.), e.g. Lidén, Studien zur altind. u. vgl. Sprachgesch. 15, Uhlenbeck s.v., Persson, Beiträge zur idg. Wortforschung 100, etc.; only Walde-Pokorny I, 590, express some doubt.

From Proto-Munda ga-da "in clusters, numerous", cf. ghaṭā- "multitude, troop" (Varāh. Bṛh. S., Kathās., etc.), ghaṭayati "brings together, unites", (Suśr., S'āk., Bhaṭṭ.), saṃghaṭayati "assembles, collects" (Kathās., Rājat.), saṃghaṭa- "heaped up", saṃghaṭṭa-, saṃghaṭana-, ghaṭana-, n. "joining, union with", saṃghāṭa-, m. "carpentry" (cf. Mar. sāgaḍ "double-canoe", etc., see J. Bloch, Langue marathe 417, and Turner s.v. saṇār), saṃghaṭṭa-yati "collects" (Mhbh., Rājat.), Pkt. ghaḍī-, ghaḍiaghaḍā- "an assembly" (goṣṭhī, Deśīn. 2, 105), Pa. ghaṭā-, m.f. "multitude, heap, crowd, dense mass". These words are usually derived from granth- "to tie or string together" (e.g. Wackernagel, Altind. Gramm. I, 167, Rhys Davids-Stede,

⁶⁸⁾ Skr. Pa. ahikuṇḍika- "snake-charmer", the lit. meaning of which is alleged to be "bender", cannot well be separated from ahiguṇṭhika-, ahiguṇḍika-, the lit. signification of which is hardly "one who is covered with, or wrapped up in, snakes". For the explanation of these words Tel. kuḍimivāḍu and Tamil kuḍumi may be of interest, but cf. also Skr. ahituṇḍika-, id. (Vāsavad.).

Pali Dict.), but the technical meaning of granth- is totally absent in ghat- and its derivatives. On the other hand, we also find such variants as Skr. khaṇḍa-, m.n. "number. multitude, group" (Mhbh. etc.), kāṇḍa-, id. (S'iśup. 1, 38, Viltramāṅk. 6, 8), kaṭa-, kaṭyā- (kaḍyā-) "multitude" ⁶⁹ (Yaśastil.), kaṭinī-, i. "army" (Yaśastil.), kaṭaka-, m.n. "an army, caravan, royal camp", and perhaps gulaka-, m. kulaka-, n. "multitude", (the first word in the S'rīkaṇṭhacaritam, see Schmidt, Nachtr., the second in udbhidyamānaromapulakakulaka-, Bhāg. Pur.).

Cf. S. gad gud "very many, numerous, in mixed company", gada gud "numerous, in a cluster", gale gole "in company, together", gad gad "in crowds, numbers, flocks, to flock together", gan ganao "to crowd, be numerous" (Campbell), genec' genec', genec' gesec' "numerous", gadel "a multitude, crowd, flock, crowded, numerous", gas gas "very many, a swarm", gasa gasi "crowded, thronged, packed, close, rubbing against one another" (contamination with gasao "to rub"), gesec' gesec' "in crowds, swarming, in a large number", kal kal "numerous, exceedingly", had hud "a large number", had had "crowdedly", etc., Ho guți "troop, band, crowd", K. kārū, kārū "herd, flock" (= S. khar, id.).

Skr. $k\acute{u}la$ -, n. "a herd, flock, swarm, multitude, race, family" (since S'at. Br.) is ambiguous (cf. also Khmer $trek\bar{u}l$ "race, family", Mon $jak\bar{u} < *jak\bar{u}l$ "race, species"?), but Burrow, BSOAS. 11, 139, is perhaps right in deriving it from Tam. kulu "society, bond, assembly, flock, herd, swarm, shoal", kuluvu- "to assemble in large numbers, to crowd", Kui $k\bar{u}lu$ "family, clan, tribe, caste", etc.; cf. also $g\acute{a}v\bar{a}m\dot{k}ulm\acute{u}$ - "herd of cows" (Taitt. S.), which he compares with Tam. kulumu- "to collect, assemble", and gulma-, m. "a troop or guard of soldiers" (: Kann. gummu, gummi "mass, crowd"). Since both Drav. gud-/kud- and Proto-Munda ga-da seem to be native roots, the situation is rather complicated. An m-suffix is also found in Munda, e.g., S. pot ma = pot ea "potbellied". Even if the identity of gulma- and Kann. gummu be admitted, there remains the problem of gulaka-, cf. S. gale gol_{e} and Ho guti.

28. Skr. ghața-, m. "jar, ewer".

Since Mhbh., Rām., Manu, Suśr. Burrow, BSOAS. 11, 138 n. 1, derives this word from Dravidian *goḍa (Kann. koḍa). Since in the present preliminary state of the study of the Aboriginal words in Sanskrit it is necessary to survey all possible solutions it may be useful to oppose the following explanation to the one already forwarded. Beside ghaṭa-, there occur the following variants: gargara-, m. (Mhbh. 70), gargarā-, f. (Lalitav.), gargarī-, "churn, butter-vat, a kind of water-jar", karkarī-, f.

⁶⁹⁾ On these (and the preceding) words, see also Renou, J.as. 1939, 386. A word kaṭapra- is inferred from kaṭapraśabdaḥ Deśīn. 2, 13 (Böhtlingk II, 297) but this is rather to be taken as kaṭa-praśabda-.

 $^{^{70}}$) As for Mar. $gh\bar{a}gar$ see Bloch § 84 (p. 98 f.), who tentatively explains gh by analogy.

"waterjar" (Bhartṛhari), karkaṭī-, id. (Schol. ad Amarakośa) and karaka-, m. "water-pot" (Mhbh., Rām.). These words point to a root gaḍ, a prefixed form of which is found in bhṛṅgāra-, m.n. "water-pot, pitcher". (<*bĕrṅar, nasalized form of gar, gaḍ). Cf. also Si. ghāghari, f. "waterpot"
(Turner s.v. gāgro) and Skr. lex. gaḍḍuka-, m. = Nep. gaṛuwā "small earthen pot", etc. (see Turner s.v.), Pkt. khaṇḍa-, n. "a liquor pot"
(madyabhāṇḍam). As for kaláśa-, m. "pot, water-jar" (ŖS.), its formation is not quite clear (but cf. Skr. bāliśa-, etc.).

These words suggest a Proto-Munda origin. Cf. (besides S. gagra, ghagra, ghara, which are obviously reborrowings from Aryan) S. haṇḍha "a large earthenware jar" (> Hi. $h\bar{a}d\bar{a}$) and haṭhua, Kh. hāriā "cooking pot".

29. ghattayati (ghattate)

"to stroke, touch, stir, shake, set in motion" (Mhbh., Suśr. and later literature, cf. mṛdvagninā ghaṭṭayan vipacet "stirring" Suśr.). It is usually regarded as a Prakit word derived from ghaṭṭa- = Skr. ghṛṣṭa- (Pet. D., Uhlenbeck). But the Prakrit form of ghaṛṣati is ghasai "rubs", and its meaning departs rather widely from that of ghaṭṭayati.

Cf. S. ghaṇṭa "to stir round or about (in a vessel)", ghaṇṭur "to stir about in a pot", M. gaṇṭi "to stir with a spoon while cooking", S. gheola "to move, stir, make muddy", heoḍa, heola "to mix, stir up (with the finger)", M. Ho hoṇḍā "to stir while cooking", etc. Root ga-ḍa "to stir, muddy, turbid".

Perhaps Skr. lex. ghanta, m. "a sort of sauce, vegetables made into a pulp with water, turmeric, mustard seeds and capsicums" (Wilson) and matsyaghanta, m. "a fish-dish" belong to this word-group.

30. cāṭa-, m. "cheat, deceiver, fortune-teller".

Since Yājñav., Pañcat., etc.; Pkt. cāḍa- "deceitful" (māyāvī Deśīn. 3, 8). Cf. M. ceṭ, ceṭe, ceṇṭ "cunning, clever". S. cạtur "vigilant, alert, smart, scheming (with an implication of deceitfulness), to be scheming, deceitful" is however a loanword from Hi. cātur (Skr. cātura-) "clever, able, shrewd, skilful, dexterous", which seems to be a different word, cf. Ho cutur "cunning, shrewd, sly", Nep. chaṭṭu "cunning, expert".

Cf. furthermore Skr. śatha- "false, wicked" and chala-, n. "fraud, deceit, pretence, delusion"?

31. cipița - "blunted, flattened, flat".

1. Esp. said of the nose, cf. cipiṭanāsa- Varāh. Bṛh. S. 67, 7, -cipiṭanāsikā Kathās. 20, 108. Already known to Pāṇini (5, 2, 33), first occurrence in lit. Sanskrit in Var. BS. and Jātakamālā (e.g. 44, 16 sphuṭitacipiṭavirūpaghoṇa-). In the Harṣacar. it means "short, of a bag" (hrasvaḥ) and "thick, of the lip" (sthūla īṣallambaś ca), see Thomas, JRAS. 1899, 511. When used as a noun, cipita-, m. denotes the "flattened

rice" (Yaśastil.), cf. lex. civița-, m., cipițaka-, m., cipuța-, m., cipața-, m. id. (the last word also = "flat-nosed"). Cipițī-kṛ- occurs Kādamb. 227, 5 Pet., Bālarām. Cf. Pa. cipița- "flattened", Pkt. civiḍa-, civiḍha-, cimiḍha- (see p. 23!), id.

Carpața- "flat, flattened", since Varāh. Brh. S. (cf. 68, 58 and Utpala ad 27 [25], 12); lex. carpața-, m., carpațī-, f. "a partic. kind of cake", cf. Hi. cāpṛā, capṛī "a cake of cow-dung", capātī, cāpātī "a thin cake of unleavened bread" (like Dutch vlade "a kind of cake": Engl. flat, and the parallels quoted by Lidén, Studien zur altind. und vergleich. Sprachgesch. 88, n. 1).

Since it is clear that cipiṭa- and carpaṭa- are connected, they must be Proto-Munda words on account of the infixed r in carpaṭa- and the ablaut a: i: u in cipiṭa-, cipaṭa-, cipuṭa-. To the same conclusion points the fact that the NIA. languages have, beside the regular developments from the Sanskrit words (e.g. Hi. cyūṭā, Mar. civṭā, Nep. ciurā from Pkt. civiṭa-), also words which presuppose a different original (e.g. Panj. cāpaṭ "flake of sun-dried mud", Nep. capari "turf, clod of earth", etc., if really derived from M. Ind. *cāppaṭa-), or which must have been borrowed at a comparatively recent date from a Munda dialect in which the word still preserved the same form which it had many centuries B.C. when it was borrowed as Skr. cipiṭa- (for a similar case, cf. Skr. kubhra-), e.g. Nep. cepṭo, cepṭe "flat", Kshm. cĕpoṭ" "flat-nosed", Or. cepā, cepṭā "flat", and Hi. Panj. capṭā, Mar. cāpaṭ, capṭā, Nep. capleṭi (etc.), id. See Bloch 329 and Turner s. vv.

Cf. S. capi, capia. capio "flat-nosed, flat, not rounded wood, to flatten wood", capic' "flat-nosed", caple "shallow, with a flat bottom (river, mortar, vessels)". cepe, chepe "flat, flat-nosed", cheple, cheplo, cheplo, "low, flat, undersized" (contamination with da-wa "stunted"), chaporae "low, flat, not steep, deficient in height" (Beng. chāppar), chepra, cheporae, chepro, chepko 71), id., carpir "flat, to make do.", copot' "low, not high, hollow", cepel, cepte, cepte, cepte, "flat, flattened, low", cepo "flat-nosed, small", etc., M. cepo, ceped' "flat". K. capara "flat, flat piece, a plain" is an Aryan loanword.

The original meaning of these words must have been "depressed" as they are derived from a root ca-pa (ca-ba, ja-pa) "to press, to squeeze", cf. S. cipa "to press, afflict, squeeze, make narrow", sipi "to knead (what is moist), to squeeze", sipot' "to squeeze in the hand or between both hands", jhapat, jhapot "to pounce upon and press down" (contamination with the word-family from which Skr. jhampa- is derived), M. sipi "to rub the head" (cf. Hi. capata), M. Ho cipa "to squeeze out with the hand as, e.g. rice beer", K. cepen "to jam", and the Munda word for "fist": S. cuput', M. cipud', Ho cipud, Kh. cepad. Aryan borrowings are, e.g. Skr. cappayati "pounds", campita-, n. "sammarda", campana-, n. "sammarda"

⁷¹⁾ Cf. Hi. cippak "compressed, flat, shallow", capaknā "to be compressed, etc.".

(comm. on Yaśastil.), cāpita- "ākrāntaḥ" (Yaśastil., comm.), cip- "to press" (see Bloch 330), cf. naḍacippitikaṁ cipyamāna-, comm. on Bodhicaryā, p. 177 (quoted by Kern, Toevoegselen I, 111), Pa. cippiyamāna-"crushed flat" (Milindap.), Pkt. campaï, cappaï "presses" (camp- "to trample down", cf. campiūṇa, v.l. in Jacobi's 'Ausgewählte Erzählungen', p. 81, 7), Hi. capnā "to be compressed, be flattened, crushed or squeezed", cāpnā "to press, squeeze, knead, shampoo" (whence shampoo, see Hobson-Jobson), capaknā "to be pressed flat down or on", Beng. cāp, cīp, cipā, cipṭā "to press" (Chatterji 404, 887), Mar. cāpṇē, cipṇê, cepṇê, civaḍṇē "to press" (Bloch 329—331), cibā "flattened", Guj. cībū, cībḍū "flatfaced", Nep. cepnu "to press, squeeze, depress. urge", cep, cepāi "pressure", chipchipe "shallow", etc. 72).

The root ca-pa is a dialectal variant of da-wa, cf. S. dabao "to overcome, press down, suppress, snub, awe" (perh. reborrowing from Hi. dabānā, but cf.:) dabṛao "to intimidate, check", telpen' = celpen' "shallow, low", temec' "shallow", robot' "to press and squeeze with the hand", limbot' "to strangle, throttle, squeeze the cheeks", M. limbud' "to throttle, press down", lebed" "to press down, fill tightly", remed', rembed" "to squeeze, press", rombod' "to seize with the palm and press on the ground" 73), Ho limbud "to catch by the throat, to strangle", tembe "shallow", K. dībī "shallow cooking pot" (: S. chaba "small earthen pot", M. tupā, Ho topā "a small basket"?). Hence Nep. dhepnu "to press against", dibiyā "a small, flat box" 74), thepco "lowered, depressed, flattened, flat", Hi. dabānā "to press down", thappā "a stamp, impression, printing", tīp, tīp-tāp "the act of pressing or compressing", tīpnā "to press, compress, squeeze", Beng. dhāmsā "to squeeze, beat, press", thebrā "flat-nosed", tip "to press with the fingers, a point", tipa "to squeeze, press together" (cf. M. thepā "thumb impression"; but S. tip "fingerprint", Ho tip "a thumb impression" are prob. reborrowings) ~ Hi. Beng. Nep. chāp "stamp, print, impression, seal", Hi. chāpnā "to stamp, seal, print", chīpnā "to print a cloth", Lhd. dhabbā "a cotton-printer" (see Turner s.v. dhabba), etc. As Turner, BSOS. 5, 123, points out, Pashto drabəl "to press down" cannot be a direct borrowing from Indian, because Si. dabanu, Lhd. dabban, Kshm. dabun, Rom. dab point to *dabb-, not *darb- or *drabb-. Drabəl (if < da-r-ba-) is an interesting parallel to *ca-r-pa (S. carpir, Skr. carpața-).

A derivative from this root is used in modern Munda as a term for the flattened rice, cf. S. taben (taben), id., M. tāben "parboiled paddy beaten

⁷²⁾ Panj. cappaņ "cover" (see Turner s.v. cepnu) belongs to the affiliation of Nep. jhāpnu "to cover" (q.v.). Hi. cepnā "to stick on, paste on" (Burrow, Transact. Philol. Soc. 1945, 100) should also be kept apart, cf. Beng. lapṭā, lipṭā "to stick on" and S. cepṭhe, iemṭḥe, jimṭau, sapṭa, rebeṭ', ṭhema, ṭhubre, etc. "to stick".

⁷³) If M. cārpā (cārpad'), lārpā, tārwā "sole of the feet" are derived from ḍα-wα "flat", they must be separated from S. talka, id.

⁷⁴⁾ Nep. diuri "a small iron pan" < *diwud-? Cf. Hi. thīp.

quite flat, ciuṛā", Ho tāben "pounded rice, flat rice, churā"; cf. Skr. cipiṭa-, m., id. In Aryan we find Hi. cāwal, cāwal, cāwar "rice cleared of the husk and not cooked", Beng. cāul, Nep. cāmal (< Old Nep. cāwal), id. and, on the other hand, Beng. tāul, Kshm. tŏmul "uncooked rice". Dardic (Torwali) tūnōl, (Bashkarik) talun, Shina tarūn, is a different word as it stands for *tanul < Skr. taṇḍula- (Morgenstierne, Acta Or. 18, 253). While Platts dcrives Hi. cāwal from the same original (similarly Chatterji 517: Beng. cāul, tāul < earlier tārula), Turner merely suggests a blending of *cāmala- and taṇḍula-. The comparison with Munda shows that *tāmal/*cāmal is derived from ḍa-wa "to press, squeeze".

Corresponding Dravidian words are, e.g., Tam. cappu- "to be bent, pressed in, to become flat", cappaṭṭai, cappaṭi, cappal "flatness, anything flat", cappaṭi- "to flatten, to be crushed or jammed", cappaṭam, cappaṇam, cammaṇam "the act of sitting flat and cross-legged" (cappaṭitt-iru- "to sit do.") 75), tippi "shallow earthen vessel with a wide mouth", Tel. cāpa "a mat, anything flat to extend" 76), (cāpu "length, extent", cāpu- "to extend"?), cappaṭa "a fruit (etc.) pressed flat", cappaṭi "plain", cappiṭi "flat, not projecting", Kann. capaṭe, cappaṭe, appaṭe "flatness", cappe "that which is flattened or pressed down", etc. and, with initial nasalization, Tam. ñemiṭu- "to press, squeeze", Mal. ñeviṇṭu- "to squeeze", Kuvi nabgali "to press down". Cf. Nep. nepṭo "flat, obtuse-angled, flat-nosed", nepṭe "flat-nosed" ~ cepṭo, cepṭe, id. Since the Drav. words must be Munda loanwords 77), the -m- of Tam. ñemiṭu-, Kann. amuku- may also be explained as a Munda phenomenon (otherwise Burrow, BSOAS. 11, 353, 605). Cf. Pkt. cimiḍha- (above, p. 23).

2. An entirely different word is Skr. capeṭa-, m. (Divyāv.), capeṭā-, f. (Pat.), capeṭī-, f. (Bālar.) "a slap with the open hand"; cf. capaṭa-, v.l. in Amara 2, 6, 2, 35 Schol., and carvan- in the Hārāvalī; Pkt. caveḍā-, caviḍā-, caviḷā-, cavelā- (Pischel § 238), Hi. Nep. cameṭā, Lhd. Si. camāṭa "slap, blow with the palm of the hand". The addition "with the open hand" in the definitions of the meaning of these words points to an early contamination with the words for "flat", perhaps favoured by such words as Pkt. caveḍī- "cavity (formed by joining the hands)" (karasam-puṭam, sampuṭam ity anye, Deśīn. 3, 3), although the derivation of this word is not quite clear. Cf. Tel. capēṭamu "the palm of the hand with the fingers extended", Hi. capeṭ(ā) "id., a slap, thump, cuff" (Platts) 78).

⁷⁵⁾ Cf. Beng. capți "squatting position".

⁷⁶) Hence Skr. kaśipú-, m.n. "mat, pillow" (since Ath. S.) (with Proto-Munda prefix ka-) from *cipu?

 $^{^{77}}$) Burrow, Transactions Philol. Soc. 1945, 99 f., explains the Sanskrit words as Dravidian loans.

⁷⁸) The formation of Skr. lex. alambuṣa-, m. "hand with the fingers extended" is obscure. Perhaps from Proto-Munda *a-lambuṭ (Cf. Nep. labaṭo)?

The primary sense of the root da-wa, from which these words are derived, is however "a slap, to slap", cf. S. thapa thopo "to slap, rap each other", thapo "to pat", thap thop "to slap, beat with the hands", thapre "to slap, beat slightly, to cuff", thapa "to slap, strike, smite with the flat of the hand (on the head), to hit with the horns", M. thabri, Ho capra "to slap", K. tapara "to pat with the hand" (reborrowing?), prob. also K. barāb "to pat" (< *ba-rap'). Only a few examples of the many loanwords in Aryan will be mentioned. Cf., e.g., Hi. dhappā "a slap, box. thump, blow (with the flat of the hand)". Nep. dhāp "pat, slap", Skr. dampayate, dimbayate "samghāte", Nep. dimbā, dimmā "hard blow with the palm of the hand, slap", Beng. thābṛā, thāpṛā, thābaṛ, thāp(p)aṛ "slap" 79), thābā "to slap", Hi. thop "slap", thap "pat", thappar "slap, cuff" (see Turner s.v. thappar), Hi. lapat, lappar, Nep. labato, lapato "a slap", Skr. jhampa-"a blow" (comm. abhighātaḥ; Haravijaya), Nep. jhapaṭ "slap", Beng. cāpar "slap" (hardly from "carpața-, Chatterji 510; cf. p. 346 on car, id. <*capaṭa-), Hi. cepnā "to pat with the hand". Although several of these</p> words suggest some connexion with the flat of the hand, I presume that this is merely due to a contamination, which is extremely frequent in Munda owing to the large number of homonymous roots. A parallel instance is prob. S. sepen' "to carry on the flat of the hand (to fall in, lie flat on)", M. Ho sipin "to raise up on the palms" ~ S. teven' "to lift up, carry suspended from the hand", K. tiwin "to carry", which are hardly derived from da-wa "flat".

Corresponding words in Dravidian are, e.g., Tam. cappāṇi "clapping hands", Tel. cappaṭa "a slap or clap [a fruit (etc.) pressed flat, as a fig]", cappaṭlu "the clapping of the hands, derision" (cf. Skr. āsphoṭitam Rām. 5, 4, 12, Tilaka: vilāsārthaṁ karāsphālanam, etc.), Kann. cappaṭisu, tappaṭisu "to slap, pat", appaṭisu "to strike against, to flap, slap", etc. and Tam. tappaɨ, Tel. debba, Kann. debbe, dabbe "blow, stroke". See further Burrow, Transactions Philol. Soc. 1945, 99, who explains Skr. capeṭa- as a Dravidian loanword. It may be noted that S. thapṛe, Hi. thappaṛ, Beng. thābṛā, Hi. lapaṭ, lappaṛ, Nep. labaṭo, jhāpaṭ point to a Proto-Munda word *ḍaw-aḍ, which could be regarded as an indication that the phonetic changes d > l, jh, c are posterior to the creation of this suffixed noun. See however the introductory remarks 80).

32. jambāla-"mud, clay".

This word occurs in the Classical literature (Pañcat., Kādamb., Bālar., Rājat.), cf. jambālita~ (Schmidt, Nachträge), Pa. jambāla-, jambālī- "a

⁷⁹) See Chatterji 446, who assumes voicing of p.

⁸⁰⁾ Burrow (p. 99, n. 1) is probably right in explaining Skr. āsphālayati "strikes with the flat hand" (since Caraka Hariv., Raghuv.) as a Sanskritization of Pkt. apphālei (cf. apphadia- "struck"). Āsphālayati "tears" (vāsāmsi Bhāg. P.) is a different word, cf. sphātita- "torn" (Var. BS., Hitop.), samsphālayati (Taitt. Ār.).

dirty pool (at entrance to village)", Pkt. jambāla-, n. "duckweed" (jalanīlī; śevālam ity arthaḥ, Deśīn. 3, 42). A shorter form jamba-, jāmba- is only recorded by Ujjvaladatta.

Several explanations have been proposed, cf. Lidén, Studien zur altind. und vergl. Sprachgeschichte 85, n. 4 (Old Engl. cwabbe, etc. "pool"), Uhlenbeck s.v. (*jam-"earth" + bāla-, cf. Old Engl. pól, Lit. balà, OChSl. blato; accepted by Kurylowicz, Mélanges Vendryes 208), Petersson, Studien über die indogerm. Heteroklisie 38 (Arm. cov "sea, lake, basin, reservoir of water"). All these theories must be rejected as they disregard the NIA. forms Hi. jhābar "marshy land, marsh, fen, swamp", Beng. jabjabe "an onomatopoetic to denote the idea of stickiness and moisture" (cf. Beng. jābṛā, jobṛā "smudge. blotch", Chatterji 405, 887, 892), etc., which point to a radical element jab/jamb.

Cf. S. jawa "to soak, saturate", M. jovi "marshy land", S. jab jab, jab jabao, job job, job jobao, jobo, jobo, jobo, joboc' joboc' "wet, moist, damp, drenched", jobe "to dirty, wet, roll in mud or water, be besmeared, bathe", jobe jobe, joboc' joboc' "muddy, miry, moist", jobe jobo "drenched, soaked", jubhi "marshy, swampy, boggy, watery(rice-field)", jhabar jhubur "drenched, soaked, wet through and through", jhak' jhabur "drenched, soaked", jabd(a)ha "hollow, moist", jobd(h)ao "to put down (or sink) in mire, water", Kh. M. jobhi "swampy ground", M. jubhi "mud" (Ho jobe, id.), jubilā "a wet field", S. sabja, sabjao "to become wet", subur subur "watery, thin", etc. Nasalized forms are, e.g., S. som, som somao "moist, damp, wet"; cf. Nep. sim "marsh, bog, morass", etc. (: Beng. sapsapā "to be wet and uncomfortable", Chatterji 891).

The root is da-wa (ja-wa), cf. Ho dobe, jobe "mud", K. dubi "marsh" (: S. jubhi "marshy"), Kh. $tobd\bar{a}$ "mud" (: So. $jobb\bar{a}$ -, id.), S. dub dub "to dip, immerse", tub tub "plunging, getting under the surface, to dip, plunge", topo "to dip, immerse, bathe" (M. tupu "to moisten", Ho tupu "to dip in water", K. $t\bar{u}p\bar{u}$ "to wet, get wet"), M. dobe "to dip in water", dumbui ($dubu\bar{i}$), $dubu\bar{i}$ ($dubu\bar{i}$) ($dubu\bar{i}$) "wet, $dubu\bar{i}$ ($dubu\bar{i}$) "wet, $dubu\bar{i}$ " ($dubu\bar{i}$) " $dubu\bar{i}$ ", $dubu\bar{i}$ 0 "wet, $dubu\bar{i}$ 0", $dubu\bar{i}$ 0" ($dubu\bar{i}$ 1") "wet, $dubu\bar{i}$ 1") "wet, $dubu\bar{i}$ 2", $dubu\bar{i}$ 3", $dubu\bar{i}$ 4", $dubu\bar{i}$ 4") "wet, $dubu\bar{i}$ 5", $dubu\bar{i}$ 4") "wet, $dubu\bar{i}$ 4") "

Hence Hi. dūbnā "to dive, sink, drown, to be immersed; to be inundated, flooded; to sink, set (as the sun)", etc. §1). See Turner s.v. dubnu, who assumes a root "dubba-, metathesis of *budda-. But cf. Hi. dabrā, dabṛā, dabṛā "marshy land, pool, puddle", dābar "low ground, where water collects, marsh, swamp, pool, puddle, small pond, etc.", dhabar, dhabrā "muddy, turbid": jhābar, id. (cf. juwār, jawār "flood"?); Beng. dobā "puddle, small tank" (unlikely Chatterji 405, but cf. 495), dub "dipping", dubā "to sink": jābdān "to sit in water or mud". The suffix -d- is also found in Kh. tobdā, S. jabdaha (and sabja < *dabda?), etc. It is obvious

⁸¹) Already suggested by Manindra Bhusan Bhaduri, A Mundari-English Dictionary, Preface IX.

that dub- is an Austro-Asiatic root, which cannot have arisen through metathesis from bud-. In Aryan it is used since the MI. period for majj-(e.g. dubbantam "majjantam" Mrcch. 264, 15 ed. Parab), cf. also dimphiam "jalapatitam" (Deśīn. 4, 9) 82).

As for Skr. kardama-, m. "slime, mud" (since Kāty. S'S.), its explanation depends on whether we take karda-, kardaṭa- (lex.) as really existing words or as inferential forms (which would enable us to connect dam- with dub-). This point must be left undecided.

33. jála-, n. "net, web, lattice".

Since Ath. S. It often denotes something which is dense ("zusammenhängende, dichte Menge" Pet. Dict.), e.g. dhvānta-jāla-, Daśak. 50, 5—6 Agashe: eventually it has come to mean "multitude" (see Renou, J. As. 1939, 386, n. 1). Since Lidén, Stud. zur altind. und vergl. Sprachgesch. 3 ff., it is generally connected with jațā-, f. "matted hair" (see Uhlenbeck, Walde-Pokorny I, 593), although Wackernagel in his review of Lidén's book had rightly objected that the i of jata- is against this derivation (Idg. Forsch. Anzeiger 12, 20) 83). Nevertheless jāla- and jaṭāare probably connected, cf. Pa. jatā- "tangle, braid, plaiting, matted hair, tangled branches of trees, the tangle of desire, lust" with Pa. jāla- in tanhājāla- "the snare of worldly thirst", kāmajāla-, etc. Since Pkt. jāla- shows the same semantic development to "multitude" as the Skr. word (e.g. Jacobi, Ausgewählte Erzählungen, index), it is tempting to explain Skr. chaṭā-, Pkt. chaḍā- "multitude" as variants of jatā-. This would involve a non-Aryan origin. As a matter of fact, a great many NIA. words point to a Proto-Munda root da-da "matted, entangled", e.g.:

Nep. dhariyā "a bamboo fishing net", Ass. dhāri "bamboo mat", Beng. dhārā "coarse mat, fence of stakes", Pkt. samdaṭṭaya-, samdaṭṭa- "samlagnam" (Deśīn. 8, 18);

Pa. taṭṭikā- (teṭṭika-) "a straw mat", Pkt. taṭṭī- "a hedge, fence" (vṛṭiḥ Deśīn. 5, 1), ṭaṭṭiā- "a screen, curtain" (tiraskariṇī 4, 1), Nep. ṭāṭ, tāṭ "sackcloth", Ass. ṭāṭi "bamboo fence", Beng. Or. ṭāṭi "bamboo mat", Beng. ṭhāṭ "framework", Hi. ṭhāṭh "frame of a roof"; Tam. Mal. Tel. Kann. Tulu taṭṭi "screen" is a loanword. Cf. Skr.ṭal-?;

Hi. laṭā "entangled, matted, tangled or matted hair", cf. laṭā-dhārī "having matted hair, a mendicant or an ascetic with matted hair" = jaṭā-dhārī; Nep. laṭṭo "cluster, lock of hair", laṭṭinu "to become matted or entangled (hair)", laṭpaṭyāunu "to wrap up, roll round, entangle", laspasinu "to come into contact with", Kshm. laṭhuru "woman's plaited hair", Si. liṭa

⁸²⁾ I take dub- "to dive or dip" and dub- "mud, marsh" as identical. It is however possible that they originally were different but have fused. In any case Nep. copnu "to dip, soak, drown", which Turner identifies with copnu "to stab", is a variant of dub-.

⁸³⁾ Bloch, BSOS. 5, 741, derives jaţā- and jūṭa- from Dravidian. Scheftelowitz, KZ. 53, 267, connects jāla- with Arm. calem "to plait".

"matted hair", Mar. lat "entanglement, pubic hair", laddā "mattedness of hair"; with nasalization Nep. lanthā "engagement, work, trouble, nuisance", and perhaps Skr. kilanja-, m., kilinja-, m. (lex. kalinja-) "mat".

Skr. dhtp. jhat-, jat- "to be entangled" (ujjhatita- "confused", Rājat.), lex. jhāṭa-, m. "arbour, jungle", Pa. jālajaṭita- "entangled", Pkt. jaḍia-"inlaid, set, studded", jhāḍa-, n. "latāgahanam" (Deśīn. 3, 57), Beng. jallā "feeding net for bullocks", Guj. jārū "cobweb", Nep. jhilli "web-like, webbed", jhul "curtain, mosquito-net", Mar. jhāl "tassel of hair, wickerwood basket", jhat "matted tress of hair", Nep. jatha "pubic hair", Guj. jhālar "wickerwork basket with a border" and many words which Turner derives from *jhāṭa- "sudden movement", as Nep. jhār "small bush, tuft, weed", Ass. zārni "thick jungle", Lhd. jhall "jungle", Panj. jhall "reedbed, thicket", Hi. jhalār "brushwood", Nep. jhor "brushwood, thicket, jungle" (to be separated from Pkt. jhoda- "dead tree", which rather belongs to the family of Skr. śunthá-, see p. 149 ff.), Hi. jhund "shrub, bush, underwood, thicket, thick hair, a ragged-looking tree; multitude, crowd", jhud "heap, crowd" (cf. Skr. lex. jați- "plait of hair" : "multitude"), jhandū "a lock of hair, foliage of trees", jhandūlā "having thick hair, thick foliage, thick, bushy", jhūṭ, jhūṭ, jhūṭ "shrub, bush, bramble", jhāṛ, jhāṛā "bush, scrub", Mar. jāḷ, id. Cf. Skr. lex. juṭikā-, f. "tuft, bunch", jhunta- "shrub, bush" (Pañcat. Pūrnabh.), and probably lex. jūta-, m. "twisted hair"; Or. cața, catăi, Hi. cațāī "mat", Nep. cațāi "matting" (see Turner s.v.), $s\bar{a}to$ "a cross-piece of bamboo or wood, rafter", Mar. $s\bar{a}t(\bar{a})$ "frame of split bamboo".

Cf. S. dandhi "a tuft of high grass, clump (of bamboo), cluster", dhat "a kind of coarse high grass, a thicket of hard, strong grass", dhada "a covering of bamboo, a small bridge", dhadi, dhari "the bamboo roof of a cart", duli "the roof of a cart or wagon (made of bamboo)", cata "a mat of bamboo", jati, id. (small), Kh. caro "a mat of bamboo", jhentu, jhintu "mat of date-leaf", S. jhanti "wattle, fence made of branches", jhan'jra "sieve-like, perforated, full of holes, loosely-woven", jin'jri "a watering pot (with holes), loosely-plaited, wickered, a fish trap" (cf. Hi. jhajjhar, jhanjhar, jhanjhrī), atuk' jharuk', atup' jharup' "through dense jungle, impassably; to entangle, impede", aujhar "to impede, be entangled", lața jhaura "entangled, to entangle, entwine, confuse", laota "a net for catching birds", lata phanda "entangled, entanglement", and a large number of words which mean "having untidy, dishevelled hair", e.g., dandra, dandru, dandle, darka dale, darkal markal, dondo, dalpun, dadarcam, dadurham, dalcan dalcan; cf. darum sarum "shaggy, hairy, to have a bristly beard", dunsi punsi "dishevelled" 84).

In view of the last-mentioned words it is tempting to derive Skr. dāḍhikā-, f. "beard" (Manu), Pa. dāṭhikā-, Pkt. dāḍhiā-, id. from this Proto-Munda

⁸⁴⁾ S. thatra "a mat or screen of bamboo work", tati "screen, fence" (Mar. tātī, K. tātī) are probably reborrowings from Hindi.

word-family, cf. Ho darca "beard" (: S. darka dale "having dishevelled hair"), Hi. jhajh "a long beard". Bloch, BSOS. 5, 741, suggests a connexion with the Dravidian words for "cheek" (Tam. tāļ, tāṭai, tavaṭai, Kann. davaḍe, Tel. davaḍa), but according to Ramaswami Aiyar, Ojhāvolume p. 15, these words are not native (he suggests an Austric origin). As for Tam. tāṭi, Kann. dāḍi "beard, chin", they are in R.A.'s opinion possibly a direct adaptation of dāḍhikā-. We may safely assume, accordingly, that dāḍhikā- is derived from Proto-Munda *ḍaḍi and, as such, is a variant of Hi. jhajh.

Bloch 333 and Turner (s.v. jaro "root") identify Skr. jatā- "fibrous root" with jatā- "matted hair". I am not quite sure that this is correct 85). It should be noted that there is a Proto-Munda root da-da "sticky", numerous derivatives of which occur in Santali (laj-, lat-, las-, jat-, jar-, etc.). It would be rash to affirm its identity with da-da "entangled"; S. lata pata "sticky, muddy, to be entangled in sticky matter" may be a contamination; on the other hand, though jeret' "to stick together (eyelids, threads, hair)" may be applied to hair, its meaning is rather different from those of the words quoted above. From this root are derived Hi. laj lajā, lij lijā, luj lujā, lac lacā, las lasā "sticky, viscous", Nep. lassā "glue" (Skr. lex. laśa-, m. "gum"), lito "paste" (Hi. let, id.), lasyāilo, lisyāilo "sticky, muddy, slippery", leto, ledo "sediment" (Hi. let "paste", Ass. let-ket "viscid"). Hence, though Hi. Ihes, a variant of les "stickiness, paste" seems to support the traditional derivation from Skr. ślesman-86), the etymology of Nep. liso "bird-lime", lisinu "to stick, adhere", etc. requires reconsideration.

34. dāla-, "branch".

A late word, only occurring in $S'\bar{\imath}l\bar{a}nka's$ comm. on the Acārāngasūtra; cf. Pkt. $d\bar{a}l\bar{a}$ -, id. $8\bar{\imath}$), $d\bar{a}l\bar{\imath}$ - "śākhā" (Deś $\bar{\imath}$ n. 4, 9); Hi. $d\bar{a}l\bar{a}$, etc., see Turner s.v. $d\bar{a}lo$ "branch, bough". Lidén, Studien zur altind. und vergl. Sprachgeschichte 80, connects this word with danda-, which he derives from IE. *del- (Skr. dalati "bursts"). Turner suggests that these words may possibly originate from * $d\bar{a}la$ - "piece split off", cf. Skr. $d\bar{a}ra$ -, m. "splitting", dala-, m. "small shoot", whereas Chatterji 494 diffidently derives them from *dala- = dru-, $d\bar{a}ru$ -.

Hi. $d\bar{a}r$, $d\bar{a}l$ means "branch, bough, basket (made of twigs, or split bamboo) used to throw up water from ponds, etc."; beside Beng. $d\bar{a}l$ "branch" there occurs $d\bar{a}l\bar{i}$ "basket", and Nep. $d\bar{a}lo$ means both "branch,

⁸⁵⁾ Cf. S. lar "bast or bast fibre", which is in any case connected with the Proto-Munda original of jatā- "fibrous root" and see p. 83 on Bashkarik nēr "root": Skr. nada-.

See recently Tedesco, Language 19 (1943), pp. 7, 11, who compares Hi. Ihes with Pkt. Ihasaï < sramsate. Cf. rather Nep. lahasinu "to be attached to, stick to", lahaso "attachment".

⁸⁷⁾ See Lidén, op. c. 80 with n. 6; Turner gives dala-, n.

bough" and "basket (esp. a basket used for storing rice)". In Munda we find S. dar "branch, bough", M. dār, dārā "big branch of a tree", and S. dala "large basket, broad, but with a tapering, not flat bottom, of bamboo, used for feeding cattle" (= Hi. dalā), M. dālā, Kh. dāli "basket". It is not clear which of these words are Aryan loans; the resultant a of S. dar points to an original *dari, but cf. K. dar, So. kěndārā-, ěndārā-, id. (and Kann. tōļu "head branch of a tree"?).

The original sense of several Dravidian and Munda words for "branch" is "bifurcated", e.g. Tam. kavar "a bifurcated branch", and S. caṅga, caṅgra, caṅra "bough of tree, branch of river, bifurcated, branching off" from the root dα-gα "bifurcated, wide apart", cf. cag caga, ciga cage, ciṅga caṅge, ciḥa cahe, etc. "to stride, straddle, part the legs wide, straddlingly", ceg cege "wide, with a big mouth, wide apart, asunder", caṅgerae, caṅgorae "having a wide mouth, wide-necked, wide on top (vessels, baskets)", cocoṅgot', cucuṅgut', cucuṅguc' "on the hams or haunches" 88). From the same root is derived K. dāgān "branch" (perhaps also dāgā? cf. Luke 13, 19). Kui dēgā, Kann. tổṅgĕ, Hi. dōghī "branch of a tree", Nep. coke "fork made by two pieces of wood" are Munda loanwords. perhaps also Skr. lex. laṅkā- "twig".

Beside S. caṅga "branch" we find again caṅgari (Beng. cāṅgārī) "a wide shallow basket", which is apparently connected with Ho tuṅki, So. daṅkedā- "basket". The meaning of the root, viz. "wide apart, wide open", accounts for its double application to legs and wide baskets. This leads us to suppose that Skr. dāla- is similarly derived from the root da-da "wide apart", cf. S. tạṇḍa "to straddle, part the legs", M. ṭaṇḍā "to sṭand with legs apart". It is possible, however, that the homonymous root da-da "short, stunted, bare, lopped" (see s. vv. danḍā- and śuṇṭhā-) has also yielded a word for branch, viz. Hi. ṭhāl, ṭhālā "leafy branch (esp. one lopped off)." This word may be identical with Bishshau, Eastern Suketi, Bilaspuri dāļ "tree" (J. Gr. Bailey, Linguistic Studies from the Himalayas 199, 216, 247) and further with Skr. daṇḍā-, lex. jhaṭi- "small tree" s9). There are no indications, however, that dāla- originally has denoted a lopped branch.

35. d i m b (h) a - "egg, child, etc.".

1. Skr. dimba- means: 1. "egg" (Pañcarātra, Mālatīm.). 2. "ball" (according to Wilson). 3. "an embryo in its first stage, a pupa of an insect" (lex.), 4. "a new-born child" (lex.). 5. "body" (S'iś.). Its variant dimbha- is used in nearly the same senses, viz. 1. "egg" (Pañcar.). 2. "a new-born child, a child, a boy" (Schol. on S'ānkh. GS., Pañcar., Hāla,

ss) The connexion with Hung. csücsünget- (de Hevesy, Bodding), to which F. Otto Schrader, BSOS. 8, 754, attaches much importance, should accordingly be rejected.

⁸⁹⁾ Cf. the parallel Rampur, Baghi $b\bar{u}t$ "tree" (and Lower Kanauri $b\bar{o}tan$, id.) = Hi. $b\tilde{u}t$, $b\bar{o}t$, $b\bar{o}t\bar{a}$ "stalk, stem, stump", from the parallel root $u\alpha$ - $d\alpha$ (see s.v. banda).

Bālarām., Nais.); cf. dimbhavant- (Yasastil., see Schm. N.) and Tel. dimbhamu "an infant", dimbhudu "a little boy", Pkt. dimbha- (Jacobi Ausgew. Erzählungen, p. 24, l. 19). 3. "a young shoot" (Nais.). 4. "body" (Yudhisthiravijaya, see Schmidt, Nachtr.). Dimbhaka- "a boy" occurs in a Pkt. passage of the S'āk.

The meanings "egg, ball, embryo" point to a primary meaning "globular" 90), cf. also lex. jaladimba- "a double-shelled mussel", toyadimba-, toyadimbha- "hail". Cf. da-ba "globular, swollen, large and roundish, lumpy, knotty" in, e.g., S. dab "a lump, clod", dombok' "round ball of flour, clod of earth", dhombok' "a lump", dhumbak' "a lump, ball (of earth, rice), lump of excrement", dhimba, dhipka "a lump of molasses or iron, earth", dapthu, dipthu "large, big and roundish" (cf. doptho: dontho "a knot", contamination of two roots?), dumka "roundish, oblong, oval", dumkuc' "small and oval" (contamination with da-wa "small"), M. dembā, dhembā "clod", Ho dimbu "to be in the ear (used of paddy)".

Many derivatives from this root occur in NIA., e.g. Beng. dhebuā "lump, coin (stamped bit of copper)", ḍhibrī "axle-iron", ḍhābā, ḍhibi 'mound, hillock" (Chatterji 499, 507). Prefixed derivatives are Skr. lex. godimba-, m. godumba-, m. "water-melon", godumbā-, f. "Cucumis maderaspatanus, colocynth", kurumba-, m. "a species of orange" (see pp. 24, 84). To the same affiliation also belongs the proper name Hidimba-: a prefix hi- occurs in several Proto-Munda words as hillolayati 91), hi-ndolayati (: ă-ndolayati, dolāyate, see Acta Orient. 16, 204, n. 2), hi-ngu-, m. "Asa foetida" (: Mon ngu, id.). In the Bombayedition of the Mhbh. Hidimba is described as being lambasphig lambajatharo (1, 152, 3 = 5929 Calc.) which accounts for this name being given to the big-bellied Rākṣasa. Identical with Hidimba- is, in my opinion, Heramba-, a name of Ganesa (Mhbh., Kathas., Lex.), which Bloch, BSOS. 5, 740, confounds with the Dravidian word heramba- "buffalo" (see n. 117). It should be noted that in Pkt. the name Herimba-, m. "Ganeśa" (vināyakaḥ, Deśīn. 8, 72) is distinct from heramba-, m. "buffalo" (8, 76). In sculptural art Ganesa is represented as a bigbellied person. The prefix he-, a variant of hi-, is also met with in Pkt. he-ramba- "drum" (see p. 86) and in Skr. lex. heramba- "a boastful hero" (p. 19).

The modern equivalents of Skr. śimba-, m., $śimb\bar{\imath}-$, f. "legume, pod" (Suśr.). śimbi-, f., id. (Mālat $\bar{\imath}$ m.), etc. are: Hi. $ch\bar{\imath}m\bar{\imath}$ "pod, legume, bean, green pease, etc. in the pod", Beng. chim "bean", Nep. chim "pod", and Nep. simi, sibi, sib(h)i, Hi. sem, Beng. sim(i), etc., "bean". The nasalization of b (cf. in Munda: Ho simri "bean") and the prefixation in Skr. lex.

⁹⁰⁾ Cf. Kshm. thul "egg", Nep. phul "egg, testicle" (see Turner s.v.) and Tam. pintam (< Skr. pinda-) "globular, ball, embryo, foetus".

⁹¹) Unless this is a blending, cf. Kh. hilo dolo "to move to and fro", S. hilo dolo "swayingly".

kusimbī-, f. "śimbī" (Rājanighaṇṭu) 92) are indications of Proto-Munda origin. The bean and the pea are often named from their roundish shape, e.g. M. $r\bar{a}mb(\bar{a})r\bar{a}$ "a kind of pulse, Phaseolus Roxburghii", Hi. lobiyā, lobhiyā "the cow-pea, vigna catjang (Dolichos sinensis)", which are derived from da-ba "roundish, globular" and $barbat\bar{i}$ - (the Sanskrit name of the lobiyā, see Helen M. Johnson, JAOS. 61, 170), māṣa- "bean", masūra- "lentil", which belong to ba-da "swollen". Hence śimba- is probably a variant of dimba-, cf. e.g. S. thube "knob, bunch, excrescence, tumour", K. tēbe "cob of maize", Hi. Nep. dhibri "nut" 93). Does Ved. śimbāta- in the dual vāmsagēva pūṣaryā śimbātā RS. 10, 106, 5 perhaps mean puṣṭaḥ "well-fed"? This hymn contains several Proto-Munda hapax legomena, e.g. turphárī, parpharīkā ~ tartar-, parphar-.

2. Skr. dimbha-, m. "child, boy" is obviously connected with the prefixed variant Pkt. silimba-, m. "child" (śiśuḥ, Deśīn. 8, 30). Although the meaning "egg" is sometimes so widened as to comprise also the notion "child" (cf. Tam. karu "foetus, egg, child"), this is unlikely to be the case with dimbha-, which presupposes an original sense "small". Cf. Nep. dambaru, dammaru "tiger's cub" and, with assibilation of the cerebral, Skr. śāva-, m. "young of an animal" (since Mhbh., Rām. mṛgaśāva-), Pa. chāpa-, chāpaka-, Pkt. (AMg.) chāva-, chāvaa-, id. The initial ch is mostly explained as being the result of Middle Indian aspiration of ś (Pischel § 211, Geiger § 40, Woolner, Introduction to Prakrit p. 11), although Turner s.v. chāwā tentatively traces it back to a different IE. original (*skēwo- beside *kēwo-). On the other hand, the Skr. word is supposed to stand for śāba- (which is, indeed, the spelling in South-Indian MSS.. see Böhtlingk, VI, 228) on account of Pa. chāpa-; but the Bombay editions, which as a rule correctly distinguish v and b, have throughout śāva-.

Many Proto-Munda words for "child, boy, young of an animal" are derived from roots signifying "stunted, short, small" (cf. e.g. Skr. kiśora-, ceṭa-, baṭu-, Hi. beṭā). In the same way the words quoted above are derivatives from ḍa-wa "stunted, dwarfish", cf. S. ḍeḇe "dwarfish, small", ḍeḇle "short, dwarfish, tiny", ḍeḇe ḍeḇe "exhausted, tired, dwarfish, small, to be stunted", ṭepa ṭepe "small, little" (Campbell), ṭhẹpo "small, below standard size", ṭhepca "short, of low stature", ṭhẹble "low, small, dwarfish, stunted", M. ṭhepā "short in stature, a dwarf", ṭāprā ṭoprā "small", ṭupā, ṭumpu "blunt" (see s.v. tūpará-), S. ṭembo "small-sized (fruit)", ṭembrot' "small, of low size, but plump" (contamination with ḍa-ba "globular"), ṭemel, ṭemret' "small, little, dwarfish", ṭembe ṭura "small (animals, children)" (for ṭura, see p. 150); cepo "small", ceple "flat, low, of small stature" (contamination with the word-group discussed s.v. cipiṭa-), etc. See further s.v. tūpará-.

⁹²⁾ It is not clear which plant is denoted by the name kuśimbi-, f. (Suśr.).

⁹³⁾ As for tuvaraka-, which Suśruta mentions among the kudhānya-, see Burrow. Transactions Philol. Soc. 1945, 107.

3. The third meaning of dimba-, dimbha- is "body". Cf. Pkt. kālimba-"body", although Deśīn. 2, 58, 59 kāliā- ~ kālimba- "body, cloud" might suggest a radical element kal- (kāliā, kālimba- "cloud" from kāla-"black"?; cf. Skr. mecaka- and Tam. kalam "blackness, cloud"). On the other hand, the derivation of kā-limba- from dimba- is supported by Skr. kadebara- (Lüders, Phil. Ind. 549, 557), Buddh. kadevara- (Böhtlingk VII, 329, add Jātakam. 45, 18; 211, 3, etc.), ep. kalebara-, kalevara- (Mhbh. Calc. Bomb. Poona), kalebara- Vāsavad. 154, 15 Gray, Pkt. kalevara-, kalera- (Pischel §§ 201 and 149) "body". Cf. also Pkt. olimbhā- "upadehikā" (Deśīn. 1. 153). Kadebara- and dimba- are likely derivatives from dα-bα "globular" (cf. S. dhob "form, shape, pattern"; dhobo "big-bellied", Nep. dhab, dhap "form, shape"; dhabbu "big, huge, chubby-cheeked"). Pali kalevara- "step in a flight of stairs" admits more than one explanation (cf. Beng. dhibi "mound", Panj. dhibbā "heap of sand". tībā "sandbank, hill", Kann. dibba, dimbu, dimmi "eminence, etc."?).

36. dundubha-, m. "a certain kind of non-venomous water-snake".

According to the Pet. Dict.: "Amphisbane, eine Eidechsenart ohne Füsse" (later corrected: "es sind giftlose Schlangen gemeint" vol. VII, 1747); the smaller Pet. Dict. has again "Eidechsenart ohne Füsse", hence Cappeller "a kind of lizard". In the well-known story of Ruru the dundubhais referred to as bhujaga- (Mhbh. I, 10, 6.7 edd. Bomb. Poona), although it is said to be a harmless one. cf. I, 10, 3 anye te bhujagā, brahman, ye daśantīha mānavān/ḍuṇḍubhān ahigandhena na tvaṁ hiṁsitum arhasi, and I, 11, 4 B. P., where the Rsi is cursed to be henceforth an avīryo bhujamgaḥ. Likewise Kathās. 14, 84: ahinā te priyā daṣṭā, vibhinnau cāhidundubhau/ ahayah saviṣāh sarve, nirviṣā duṇdubhā iti. Hence the duṇdubhas are mentioned as being different from serpents in Mhbh. 2, 69, 35 (South. recension, see Hopkins, Epic Mythology 25), and the vidūṣaka in the Mṛcchakaṭikā, when stating with sad resignation that he is not a real brahmin, says jadhā savvaņāgāņam majjhe duņduho, tadhā savvabamhaņānam majjhe aham bamhano "no more than the dundubha is a (real) serpent, am I a (real) brahmin" (Mrcch. p. 83, l. 7, ed. Parab). The commentary quotes nirviṣā duṇdubhāḥ smṛtāh 94).

The duṇḍubha- is a water-snake. In Mhbh. 7, 156, 175 the battle-field is likened to a river which is called prāsaśaktyṛṣṭiḍuṇḍubhā, i.e. of which the snakes are the various missiles. This is confirmed by Pali deḍḍubha(ka)-"een ongiftige waterslang of salamander" (Kern, Toevoegselen op het Pali-Wb. van Childers, I, p. 115; udakadeḍḍubhā is var. reading for udakamaṇḍūkabhakkhā in the Daddarajātaka), and by the commentary on Ait. Br. 3, 26, 3 (sa sarpo nirdamśy abhavat): nirdamśī damśanāsamarthaḥ ... jalamadhye samcarato dundubhākhyasya sarpasya viṣarahitatvād damśanasāmarthyam nāsti. Böhtlingk suggests that a water-salamander may

⁹⁴⁾ Cf. Kṣīrasvāmin's comm. on Amara 1, 7, 5 (1, 2, 1, 5): nirviṣo dvimukho 'hiḥ.

be meant. By the side of dundubha- and dundubha- (Ait. Br.) the following variants occur:

dundubhi- or duṇḍabhi- (the manuscripts vary), Varāh. Bṛh. S. 53, 17. duṇḍubhi- Suśr. 1, 10, 12, mentioned as a venomous animal! duṇḍubha-, Mhbh. 7, 6905 Calc.

dindibha- (v.l. didiva-) "water-snake" in the lexicon Madanavino-danighanțu (see below, line 5 from the bottom).

dudubha-, v.l. ad Amara.

duduma- in Mrcch. p. 90, 1. 2 (III, 20), ed. Parab: S'arvilaka boasts on his cleverness and adroitness: in every difficult situation he has an expedient at hand for he is dīpo rātriṣu, samkaṭeṣu ḍuḍumo, vājī sthale, naur jale, which must mean that in a difficult situation (and in a narrow place) he can escape as easily and as quick as a ḍuḍuma- (either a snake or a salamander; "lizard" according to the Pet. Dict.) Stenzler's text however reads ḍuḍubha- which may be the correct form.

duṇḍu-, f. (Trikāṇḍaśeṣa) is the sole form without bh in Sanskrit but Hi. has dūd, dūdu (beside duṇḍubh, a loanword from Sanskrit) "a kind of lizard without feet, a kind of snake". As for Beng. dhōṛā, ḍhōṛā "water-snake", which Chatterji 507 derives from Skr. duṇḍubhi-, resp. duṇḍubhi-, its initial aspirate (as against Hi. dōr, dōrā "a kind of lizard. a kind of snake with two heads") is variously explained ("by transference of aspirate" Chatterji 495, "through aspiration" 498). Obviously these modern words are younger borrowings from Munda, cf.:

S. dhōṇḍ (bin') "a certain water snake, the checkered keelback, Tropidonotus piscator; non-poisonous, but quick to bite if trodden on", M. Bh. duṇḍu (bin), dhōḍ "a kind of snake", M. dorā bin, Bh. dora bin, id., Ho doṇḍā "lizard", duṇḍu bin "water snake", K. dindu, dendu "water snake". Cf. further S. duluḍun, duluḍan, doloḍan (from *duḍu + ḍan) "a small non-poisonous snake, Callophis Maclellandii", which in the local Aryan dialect is called hulhulia (<*ḍhulḍhulia), and S. họṛ họṛan bin' "a non-poisonous snake, the grass snake, Coluber Stolatus" (<*ḍhọṛ dhọṛan). With regard to the tale of Ruru it is interesting to note that "The duludun snake is never killed. If any person kills one, snakes will infest his house" (Rev. A. Campbell, JBORS. I, 1915, 218). Cf. perhaps also S. tutri bin' "a certain snake, Russell's earth-snake, Eryx conicus; non venomous".

As the statement of the Mhbh. that dundubhas do not bite men may be a poetic licence, we may safely infer that the dundubha- is identical with the dhōṇd, the checkered keelback. That it is checkered appears from its identification with the rājila- (alagardo jalavyālah samau rājila-dundubhau. Amarakoša 1, 7, 5; cf. comm. on Harṣac. p. 225, l. 5, ed. Parab²: rājilo dindibhākhyo nirviṣah sarpah). Since rājila- means "striped" the snakes denoted by that name must have had a variegated skin. Tel. tuṭṭe-purugu "a sort of venomous snake barred black and grey", Tam. tuṇṭu-(k)kattari "a kind of venomous worm" perhaps contain Munda loan-words (cf. S. tutri biń).

The explanation proposed by H. Petersson, Studien zu Fortunatovs Regel 85 (dundubha- < IE. *dul-ndo-bho), is exemplary of how Skr. words should not be explained.

37. tām būla-, n. "betel".

Since Var. BS., Hariv. This word has often been discussed and its Austro-Asiatic origin may now be considered an established fact (see the references in Acta Orient. 16, 305). The prim. Austro-Asiatic form of the word must have been * $b\bar{e}l\bar{u}$, cf. Bahnar $b\bar{o}l\bar{o}u$, Alak balu, Kha blu, Palang $pl\bar{u}$, etc. A corresponding Munda form has not been found hitherto. Przyluski, it is true, connects the Austro-Asiatic word with Khmer mul "round", mur "to roll", S. $gulu\ mulu$ "round, spherical, to roll into a ball", $gur\ muria$ "spherical, globular, round" (BSL. 24, 1924, 257 f.), but it is not advisable to base any theory on such vague word-comparisons, the less so as these words point to a root bud-, whereas the word for "betel" has throughout l in all Austro-Asiatic languages. Nevertheless it can be proved that $t\bar{a}mb\bar{u}la$ - must have been borrowed, not from any Austro-Asiatic dialect spoken in Further India, but from Proto-Munda.

The \bar{u} of $t\bar{a}mb\bar{u}la$ - has not yet been satisfactorily explained. Przyluski, p. 258, only observes that in the Further Indian languages the u follows after the liquid, whereas in Sanskrit and Pali it precedes it (as is also the case in mur/mul "to roll"). In Acta Orient. 16, 305, I assumed an original *bulū, beside *bĕlū, balū, which became bul through loss of the final vowel. The u of tāmbūla- however results from a specific Proto-Munda development. Prim. Austro-Asiatic had, like Austronesian, a phoneme ĕ (called pěpět in Indonesian linguistics), which is still preserved in Bahnar, Sakai-Semang, and some other dialects, but has disappeared in Mon and Khmer. In Khasi it is represented by y. In Munda it still survives (to some extent, at least) in Sora, e.g. So. jěrů- : Central Sakai jěrö "deep". In the other Munda dialects, however, the pepet has been umlauted by the following vowel, e.g. K. ghamā, M. gāmā "to rain": Besisi gĕmā, gĕmāh (Kh. gimsee below); S. sin', M. Ho singi "sun, day" : Khasi sni, Palaung sha-ngī "sun" (prim. Austro-As. *sĕ-nī 95); S.M.K. sunum "oil" : Senoi sĕ-num, id.; K. kunum "urine": Semang kenum, kenom, id. It should further be noted that Munda has very often beside the original disyllabic words younger monosyllabic variants, cf. S. sin', K. sin (only in sina-rup', sin-rup' "*setting of the sun" > "evening") as against M. Ho singi, Kherwari bir "jungle" : Sakai, Stieng, etc. bri (prim. A.-A. *bĕrī). Skr. tāmbūlaaccordingly reflects a Proto-Munda original *tā-mbūl from *ta-mbělū, a pre-nasalized variant of Lavé mělu, Stieng mlu. It thus provides us a terminus ante quem for the u-umlaut of the Proto-Munda pepet.

⁹⁵) Variant of *tĕ-nai or *tĕ-nī, cf. Mon tanoa (noa), Khmer thnc.y, Samre. Por thni, Prou tangai, Sakai tĕn-ni, Serting tĕnyī.

In this connexion attention may be drawn to Ved. $p\bar{\imath}lu$ - in the compound $p\bar{\imath}lu$ -mant-, which occurs in the verse

udanvatī dyaúr avamā pīlumatīti madhyamā tṛtīyā ha pradyaúr iti yásyām pitára ásate Ath. S. 18, 2, 48.

"Watery is the lowest heaven, full of stars (?) is called the midmost; the third is called the fore-heaven, in which the Fathers sit" (Whitney). The exact meaning of pīlumatī- is unknown. Whitney's translation is only based on the commentary's rendering grahanaksatrādayah. See however Narahari, Annals Bhandarkar Or. Res. Inst. 23, 305, who also holds this to be the meaning of the word. Although this obscure word is no reliable foundation for any theory, it may be noted with due reserve that, if the existence of a word pīlu- "star" could be rendered probable on other grounds, it could be explained as a Proto-Munda loanword. The common word for "star" in Kherwari (S.M. Ho Kw.) and Kurku is ipil (N., also K., iphil). Some authorities quote somewhat different forms as K. epal (Rakhal Das Haldar, Hunter, Crooke), Kw. epal (Crooke), epil (Driver), pilu (Rakhal Das Haldar), but their correctness is questionable. These words contain a prefix i-, ĕ-, and p(h)il- or*pěloih, cf. Senoi pělaui, pěrlaui, Sakai pěrlohi, pěloi, Semang puloe, pěluih. In $p\bar{\imath}lu$ -, which presupposes Proto-M. *pilu (instead of *pil $\bar{\imath}>pil$). the pěpět, instead of being umlauted, would have become i as in Kharia, cf. Kh. selop "deer" (S.M.K. silip), berod "to rise" (M. birid), biru "hill" (S.M.Bh. Ho buru, So. běrū-), etc.

38. timita - "wet, damp" (Kaut.), etc.

The Dhātup. has timyati, tīmyati "to be wet, damp", tepati "to drip", and lexicographers mention some derivatives from tim- as tema-, temana-. Tarapada Chowdhury's assumption that taimātá- (Ath. S. 5, 13, 6; 18, 4) means "wet, liquid, living in water" is merely conjectural and does not prove the existence of *tema- in the Vedic period. By the side of timyati occurs stimyati "ārdrībhāve", which is attested in the classical literature. The Pet. Dict. quotes Caurapancāśikā 21 (ed. Bollensen) tām stimitavastram ivā ngalagnām (ārdravasanam comm.) and Kielhorn in his note on Pancat. I, 722 (śl. 29) explains stimitonnatasamcārāh as referring both to jaladāh ("wet, moist") and to sajjanāh ("fixed, steady"), which, however, is not necessary (see Böhtlingk, Ind. Spr.).

The variation stim: tim- does not prove the IE. origin of these words. Stimita- "fixed", which is a different word (see Acta Orient. 20, 32 f.) may have influenced tim- (as inversely timita- is sometimes used in the sense of stimita-, l.c.). unless stim- is a Sanskritization of Pkt. *thimmadi = timmadi. In any case Pkt. theva- "a drop, a little" and thippai "to drip", which Pischel, pp. 102 f., 149, derives from Skr. stepati (kṣaranārthaḥ, Dhātup. 1, 388) are the original forms, from which the Sanskrit root has been derived.

The Proto-Munda origin is clear on account of the variation -p:-m (Mar. tīp "drop, tear", Hi. tīpnā "to make drip", Mar. thēb "drop", Guj. uthevo, etc., see Bloch, pp. 339, 350, as opposed to Pali temanam "wetting", Beng. teman "sauce", Mar. tevņē "to dissolve, become moist", see Turner, s.v. tiun) and the vowel variation in Hi. tap "sound of dropping, patter or drop (of rain)", taptapānā "to drop continually, to drip", tabhak, tapak "sound of dropping, the dropping", tapkā "continuous dropping, dripping", tipkā "a drop, a spot", Beng. tupā "to drip", etc.

Cf. S. tipąk'; "a drop (of rain), to fall in drops" (M. tipā), tipic' tapak' "drizzlingly, to drizzle", tipic' tipic' "id. (about drizzling rain)", tipok' torok' "dripping, in drops, to trickle, leak", tip tap "one after the other", tapac' tipic' "in few drops, to rain in drops", topok' (thopok'?) "to drop, drip, a drop" thop, id., thop thop "in drops, drippingly", thop thopo "to drop, drip", lipak' capak' "(to fall) in large drops", etc.

As the initial consonant is a cerebral we may expect to find the regular variants with palatals or sibilant. As a matter of fact, Santali has (beside tipic' tipic' "drizzlingly, to drizzle"), jipir jipir, id., sipir sipir, adv. "continued drizzingly". Similar variants occur in NIA. Thus Nepali has, by the side of tap "ear-pendant", tap-tap "the sound of dripping or throbbing", tapaknu "to drip, drop, trickle", also jhimi-jhimi "drizzling rain, drizzle", jhimjhime "steadily drizzling", sim-sim, sim-simi "falling in light showers", cf. Hi. jham-jham "heavy down-pour", Mar. jhim-jhim "softly and lightly (of rain)", etc.

[Unlike these words for "drizzling, dripping" (to which, it seems, also belong Kui tipi topu inba "to fall drop by drop", Tam. tumi "rain drops; light, drizzling rain"), timita- (and Pa. temana-, Mar. tevnē) express the general meaning "moist". It is doubtful, therefore, that these words should be connected with the first word-family. They rather constitute a different word-group which may be connected with the words discussed on p. 61, s.v. jambāla-].

39. tumula - "tumultuous, confused"; n. "noise, tumult, uproar".

Since Lāţy. S'S., Mhbh. The connexion with Latin tumultus, which dates back to the early days of Indo-European studies (cf. Pott, Etymologische Forschungen, 1st ed., I, 1833, 90) is generally accepted. Like its morphological parallel singultus, however, tumultus is a verbal noun; it stands for *tumel-tu-s and presupposes a verb *tum-el-io, just as sepultūra is derived from the stem of sepelio "I bury". Sepelio contains a verbal suffix -el- (see H. Pedersen, KZ. 39, 354, W. Schulze, KZ. 41, 335) and is derived from the root sep- (Skr. sápati). Since *tumel- cannot be an Indo-European root, it must have been derived in the same way from *tum- (cf. Lith. stúmti "to push, shove", rather than Latin tumeo "I am swollen", with which Walde, Lat. etym. Wörterb. s.v. connects it).

As for Skr. tumula- (tumala-, tumura-), it cannot well be derived from the same stem *tum-el- on account of -ula-. Some scholars, it is true, assume a suffix -ulo- (Benveniste, Origines de la formation des mots en indoeuropéen I, 41) but this does not explain either tumultus (which is a verbal noun), or the Skr. variant tumala- in Mhbh. and Raghuv. (see Pet. Dict.). The reading tumūla- is prob. worthless, but Tam. timilam "great din, noise, tumult" (Tiruvācakam 29, 4), timil, timirtam (timitam), id. may also be of interest for the explanation of tumula-. Of particular importance, however, are several NIA. words which suggest a derivation from a root mul-, mal- (cf. Pkt. bamāla- "tumule", comm. kalakalaḥ, Deśīn. 6, 90). These words are Hi. talmalī "restlessness, fidgetiness, impatience", talmalānā "to be restless, agitated, impatient", Nep. talbal "restlessness", talbale "restless", tulbul "unrest, uneasiness", tulbule "restless", tulbulinu "to be confused, be agitated or uneasy", tarbar "hastiness, nervousness" (adj. tarbare), etc. The second component of these words, viz. bal/bul, bar (nasalized mal) stands for bad, cf. Hi. tarā-bharī "haste, hurry, panic": tarp(h)arana "to be agitated, to toss about restlessly or uneasily", catpatānā, chatpatānā, id., Nep. catţa-patţa, cat-paţ "haste, hurry", caţpatāunu "to be in a hurry", chatpate "restless, flighty, sprightly", jhatţapațța, jhat-paț "at once, quickness, hurry", cuț-piț "riot, quarrel" and, with final nasalization, *chunmune* "restless (of children)"; with *l*: Guj. latpat "restlessness" (see Turner s.v. latpatinu). It is clear that most of these words are echo-words, the components of which are derived from Proto-Munda roots da-da and ba-da. Other instances are, e.g. Hi. culbul "restlessness, playfulness", culbulā, culbuliyā "restless, fidgety", Beng. cul-bulā, cil-bilā "to be fidgety, to be eager to move away", tal-balā "to be shaky and moving", dal-malā "to shake and pat" (Chatterji 891) 96), Nep. salbale "constantly moving, restless", cillibilli "at sixes and sevens, a state of complete disorder", lathābajra, lathābadra "state of disorder or mismanagement".

The proper meaning of these word-groups is "confusion", cf. So. gélun-bólun "confused", S. albaṭ salbaṭ "confusedly, to confuse", almal "confusion, disorder" 97), andmandao "confusion, to confuse, etc.", anduk' manduk' "perplexed, troubled", asbas "perplexity, bewilderment, etc.", dalmalao "to shake, agitate, disturb", taṛbaṭao, tuṛbuṭau "to drive, hurry on, hasten, urge", sarphaṛ "to act restlessly", cuṭuk' bhuṭuk', culur b(h)uṭur, culun bhuṭun "restless, unsteady", culbulia "unstable, restless, fidgety" (parallel to ulbulia; perhaps reborrowed from Hi.), chil bil "restless", chaṭ paṭ "to be restless, impatient", chilki bilki, tilki bilki "eagerly,

⁹⁶⁾ Mar. tadphad "shock, struggle", tadphadnē "to shake violently" has a similar divergent meaning. But cf. Apabhramśa tadapphadai "uttāmyati, ākulībhavati, capalāyate" (Bloch 344). Probably there is a contamination of several roots ("hurry", "to shake", "disorder"), which can no longer be distinguished. Cf. Nep. jhārnu "to shake off", etc.

⁹⁷⁾ The "resultant" a is from au, cf. aula paula "irregular, in disorder" (blending with an Aryan word? Cf. Beng. aula, which Chatterji 383 derives from Skr. akula-).

restlessly" (contamination with the root discussed s.v. lola-), etc. Echowords derived from \$\dalpha a \dalpha a\$ alone are: \$\text{thol}\$ \$\text{thol}\$ "restless, agitated", loro thoro "impatiently, nervously", loto thoro, id., cut cut "to be eager, restless, impatient" (contamination as above), carak' curuk' "restlessly (jump about)". As for \$ba-\dalpha a\$, derivatives from this root also occur in combination with those from \$ga-\dalpha a\$, cf. S. \$ga\dalpha ba\dalpha\$, \$garbar\$, \$ha\dalpha aloue, gul mal\$, etc. (see s.v. \$\bar{a}kula-\$)\$, and Pkt. \$halabola-\$, m. \$\sim bola-\$, m. \$(kalakala\hat{h} De\sim n. 8, 64; 6, 90), Tel. \$galibili\$ "disorder, confusion". Iteration of \$ba\dalpha\$- occurs in Skr. \$bharbhar\bar{a}-bh\bar{u}\$ "to get in disorder" (Maitr. S.), Old Beng. \$bh\bar{a}bar\bar{\tau}\$ "confusion" (Chatterji 512, 516). Cf. M. \$bambar\$ "delirium, to talk nonsense"?

In tumula- the two words *tul and *mul must accordingly have coalesced to one new word. This explanation may seem rather far-fetched from an Indo-European point of view, but in Munda (and in NIA.) such blendings occur very frequently. Elsewhere (s.v. ākula-) we have drawn attention to *gabad, which is a blending of *gab- and *gadbad-. Another instance is, e.g., Hi. jhapatnā "to go quickly, run with all speed": jhap and jhat pat "quickness, rapidity". In the case of tumula-, the echoword *tul mul has probably been blended with *tum-, a derivative from a root da-ba, which may be inferred from Skr. damara- "affray, political riot or disturbance" (see s.v. ātopa-) and S. damadol "confusion, disorder, uproar, disturbance, tumult", which is composed of the words dama and dol (from da-da, cf. dalmalao, thol thol, etc.) 98). Cf. Hi. dhamā-caukṛ $\bar{\iota}$ "tumult", Nep. dhumcakra, dhuncakra "uproar, confusion", Beng. dhumdhām "tumult, pomp" (contamination with a congener of Skr. ādambara-), Nep. dhum "riot, bustle, ado". However, in view of Kshm. tambalun "to be agitated" (dam + bal), a combination dam + mal (> *tumal, *tumul) is also possible.

40. tūpará- "hornless; m. a hornless goat".

A common word in Yajur-Vedic texts (Taitt. S., Kāth. S., Vāj. S., etc.) and in the Atharva Samhitā. It also denotes a sacrificial post without its top, cf. Taitt. Br. 1, 3, 7, 2 ("abgestumpft" Pet. Dict.), $\overline{A}p$. S'S. 18, 1, 8 ("ungehörnt" Caland). In the later language $t\bar{u}bara$, $t\bar{u}vara$ - is used instead, cf. lex. $t\bar{u}vara$ - "hornless bull, beardless man, eunuch", and, in the Mahābhārata, $t\bar{u}baraka$ - "castrated person, weakling" (as a term of contempt, 5, 160, 64, etc.). For this sense-development cf. panda- (s.v. banda-). It should be noted that $t\bar{u}bara$ -, $t\bar{u}vara$ - (which are usually regarded as Middle Indian equivalents of $t\bar{u}para$ -) may equally well represent the original form of the word, the p being due either to Proto-Munda unvoicing or to the tendency of the Vedic language to avoid b, which was considered a characteristic of Prakrit (like t, d, etc.).

⁹⁸) Beng. dāmādol "tumult" is of deśī origin according to Chatterji 495. See s.v. ātopa-.

The initial t stands for t, just as in S. tope "short, to cut (off, short), dock (a horse), tear out the tail", thopro "low, short brushwood, to cut low, become stunted", theprec "small, low, stunted, puny (trees, plants)", thapra thopro "small brushwood, to become small, stunted". The cerebral is still preserved in M. $tup\bar{a}$, tumpu "blunt", S. theble "low, small, dwarfish, stunted", and several words for "small" as M. $thep\bar{a}$ "short in stature, dwarf". Cf. further K. $t\bar{u}p\bar{a}l$ "sapling" (< *"small"?), Kh. sumbro "trunk (of a tree)", $t\bar{a}mp\bar{a}$ $t\bar{o}mp\bar{e}$ "puny", Ho tumb-rub "short", K. $d\bar{a}m\bar{u}$ "to be blunt".

Like the synonymous roots $d\alpha$ - $d\alpha$ and $w\alpha$ - $d\alpha$ (see s. vv. $da\eta d\hat{a}$ -, $ba\eta d\hat{a}$ -) the root da-wa may develop the meanings ("cut off, stripped" >) "solitary, bereft" and, on the other hand, ("cut off" >) "stunted, small, dwarfish". Cf. S. thubra "an old bachelor" (whence Beng. thubra) and S. tuar (t. tapar) "orphan(s)". The last word still preserves the ancient form of the Proto-Munda word, which has been borrowed as Skr. tūvara-, tūbara-, viz. *tuwar. This word has again been borrowed into Aryan at later dates. Thus Pkt. tūvara- may have been taken directly from Munda and its initial cerebral need not be explained as a phonetic development of Aryan (see Pischel § 218). A comparatively recent borrowing is apparently Nep. tuhuro "orphan", which is particularly interesting both on account of its meaning (which is identical with that of the Kherwari word), and because of the intervocalic h. In Kherwari, particularly in Santali, intervocalic v and w may be represented by h, e.g., S. lohot' (M. $lu\bar{a}d$) "wet, moist" from the root da-wa (see s.v. $jamb\bar{a}la$ -). It is not a priori certain, therefore, that the h in tuhuro results from a phonetic development of Nepali 99). Other loanwords in Nepali are tumminu "to be cut off at the root, to finish", tumote "small, slight, mean" (cf. S. tamuti, p. 105!)

Parallel developments are, e.g., Skr. $k\bar{u}t\dot{a}$ -"not horned": kuntha-"blunt" from ga-da, S. dondo "with very small horns, bent backwards" from da-da "to shave, cut off", Skr. mundin- "hornless": S. mundin- "a hornless bullock", mundin- "having his hair cropped or shaved", mondgoo' "bare, hornless, polled, to shave or cut off" from wa-da. Cf. also the various meanings of Engl. to poll ("to crop the hair, cut off the top, cut off horns").

Kui tupa "short, dwarfish", tupri "short", tupura "a short man or boy" are clearly Munda loanwords (cf. M. tupā, S. thopro). See further s.v. dimbha-.

41. dandá-, m. "stick, staff, pole, cudgel, mace".

1. Since RS. 7, 33, 6 daṇḍā ivéd goájanāsa āsan párichinnā bharatā arbhakāsaḥ "Wie Stecken, mit denen man Ochsen treibt, lagen gebrochen

⁹⁹) For similar younger borrowings in NIA. beside those dating back to the Old Indian period, see s.v. *kubhrá-* and cf., e.g., Nep. *tumbo* "gourd" (which cannot be derived from Skr. *tumba-*).

die armen Bharatas" (Hillebrandt). Apart from the metaphorical use of daṇḍá- in the sense of "flag-staff, handle", it also denotes the stalk or stem of a plant (kadalīdaṇḍa-, ikṣudaṇḍa-, since the Mhbh., see Pet. Dict.). As such it is comparable with dala-, n., in veṇudala- "a bamboo stick" (Manu 8, 299).

Since Schmidt's connexion with Greek δένδοον, δένδοεον (on the last word see Stanislaw Szober, Belic'ev Zbornik 347 ff.) encounters serious difficulties (see Wackernagel, Altind. Gramm. I, 171, Thumb-Hirt, Handb. des Sanskrit, 91), most authorities now accept the etymology proposed by Lidén, Studien zur altind. und vergl. Sprachgesch. 80 ff., who derives dandá- from *dol-ndo- or *del-ndo- (cf. dalati "bursts, splits"), see e.g. Petersson, Studien zu Fortunatovs Regel 52, 55, Lüders, Philologia Indica 554. It should however be observed that the IE. suffix -ndo- is extremely rare (see my remark in "Die indogermanischen Nasalpräsentia" p. 193, n. 3): andá-100), pínda-, khandá-, pandú-, and munda- are in my opinion Proto-Munda words, whereas gaṇḍa- (galla-) "cheek" (see Kittel, Kannada Dict. XV n. 2, XVIII, and cf. Kui gaḍa) and kunḍá-, n., "jar, pitcher" (see BSOS. 9, 991) are of Dravidian origin. It would not be surprising, therefore, if dandá- would turn out to be a borrowing from a non-Aryan language, and a direct proof of its foreign origin is furnished by Skr. lex. taṇḍaka-, m.n. "post, pillar of a house" (Hemac., Med., Trik.), m. "trunk of a tree" (Hemac., Med.), and randaka-, m. "barren tree" (S'abdacandrikā).

As a matter of fact, Santali has, by the side of some Aryan loanwords as dãnd "fine, mulct, channel, ditch", dandom "fine, mulct, handle, shaft" the following words: danta "a thick stick, a club" (Campbell; cf. M. danta = ḍāṇḍā "a stick"), ḍạṭi, ḍạṇṭit', ḍạṇḍit', ḍạṇḍic' "stem (of mushrooms, palm-leaves, etc.)", dandit' "stick, staff, handle, etc.", dathi "the petioles and midribs of a compound leaf after the leaflets have been plucked off; stalks of certain plants, as Indian corn, after the grain has been taken off". Similar forms are found in Aryan, e.g. Hi. đặt, đặth, đặthal, đặthī "pedicle, petiole, foot-stalk, stem, stalk, culm, straw, stubble", dațhā, dathā "stalk", Nep. qath "stalk, stem, stock" (unexplained, see Turner s.v.), Beng. ďatā "stalk", ďatī "pestle, little stick" (according to Chatterji 492 from daṇḍikā- "through unvoicing of ḍ"). Particularly interesting is S. dandi 1) stick, staff, handle, rod, shaft, balance-arm" (= Hi. $d\tilde{a}d\tilde{a}$); 2) "bare stem, stalk". Bodding regards them as two different words. The second word must in any case be a native Munda word on account of its close resemblance to dende "with short or no tail (birds), dressed in rags (women); to pull out the tail feathers", dendke, dendket" "bare, ragged, with few feathers" (dendea, dhendea, dendka, dhendka. id.), dhendra "bare, having scanty hair or few branches", M. dende "tailless, hairless, leafless". The same application of $d\alpha$ - $d\alpha$ "to shave" to plants is found in

¹⁰⁰⁾ Cf. kuranda- "swollen testicles", and perhaps S. end "penis", So. adre "egg".

dundga, dundgar "short-haired, bare, shaven, with branches cut off, to cut short, bare", thandga "having one's hair cut short, having branches cut off, to cut hair short, to cut or break off branches", thundga, thundgar, thundgut' "bare, without hair or branches, without horns". In other derivatives the sense has developed to "poor, insufficient", as in dhandkao "to be stripped (like a stalk), destitute, poverty-stricken, needy, utterly, poor", hale dale "destitute, forlorn, straitened, shelterless, to be in want" (in the local Aryan dial. dale khale), tonta "scarce, insufficient, to deal out stingily, to be in want of, to lack", landha phucia "destitute, who has no property" (: landha "stubble, left after reaping, of cultivated cereals, etc., utterly poor") 101). Note the parallel formations with the meaning "bare, shaven, short-haired, without branches or feathers" from da-da and ma-da (see s.v. bandá-), as dunda (mundha), dundga (muṇḍga), duṇḍgut' (muṇḍgut'), duṇḍla (muṇḍla), duṇḍra (muṇḍra) and cf. Hi. lund-mund. These instances leave no doubt as to the native Munda character of S. dandi "bare stem, stalk". Thus the question arises, whether S. dandi "stick, staff, etc.", although possibly a borrowing from Aryan (cf. Hi. dadī), may be originally identical with this word. Hi. dadī and Skr. danda- probably represent two separate borrowings from Munda and Proto-Munda: in view of the general tendency to explain the cerebrals in Prakrit and New Indo-Aryan as results of a later development 102) it should be noted that the modern vernaculars often reflect more faithfully the Munda original than the corresponding Sanskrit word, just as late Sanskrit admits more freely foreign phonemes than the Vedic language does (because classical Sanskrit reflects other social strata and another form of society than Vedic) 103). Thus the question narrows down to this: was the original meaning of Skr. dandá- "stem stripped of leaves"? Several parallel instances show a similar semantic development, e.g.:

IE. *lorgā-, *lorgi- "stick, cudgel": *lerg- "to be smooth", see Walde-Pokorny II, 443.

S. muṇḍḥa, muṇḍḥak', muṇḍḥat' "a log, block": muṇḍṛa "branchless". Cf. Skr. muṇḍaka- "tree-trunk, beam" ("ein der Äste beraubter Baum", Pet. D.). From the same root is derived S. buṭa "the trunk of a tree up to where the branches begin" (see p. 65, n. 89; p. 98).

S. munret' "log": pangao "to lop"; K. bonga "club ~ naked" (cf. p. 49).

S. dan "staff, pole, rod, perch (of bamboo or wood)" [= Hi. $d\tilde{a}g$]: degra "small, stunted", denga dangua "who have no children", etc. (see further p. 140).

¹⁰¹⁾ Cf. Hi. luṇdā, luṇḍ-muṇḍ, laṇdūrā "tailless, stripped of branches and leaves": laṭnā "to become poor" (see p. 80).

 $^{^{102}}$) Thus J. Bloch, L'Indo Aryen 58, quotes Nep. daro "beam, rafter": Skr. daṇḍá- as an instance of assimilation of initial d to the cerebral.

¹⁰³⁾ Cf. p. 43 (H1. kubar: Skr. kubhra-), p. 100 (Hi. poṭā: Skr. poṭa-), p. 147 (Hi. pūṭh: Skr. puṭa-), p. 24 (Class. Skr. udumbara-: Ved. udumbara-) and p. 32.

Skr. lex. gandi- "der Stamm eines Baumes von der Wurzel bis zum Anfang der Äste": $g\alpha$ - $d\alpha$ "bare, bald" (cf. pp. 40 ff., 49 f., 51 f. 112 and Tel. gaddi, Pa. ghatikā-). We may conclude, accordingly, that dandácriginally denoted the branchless part of the stem of a tree, and, secondly, a stick, stalk or leafless branch. As stated above, many of the modern Aryan equivalents are not descended from the Sanskrit word but have been borrowed at a later date direct from Munda, e.g. Nep. daûthe, daûthe "stalky, rough, a leafless stalk, a useless person" (which Turner rightly connects with dath "stalk"; in modern Munda *daothe may stand for *danthe, or else we have to assume the normal vowel variation). Cf. also Panj. dodrū "leafless". — Proto-Munda prefixes are possibly contained in Pkt. pedanda- "rogue" (e.g. Mrcch. 57, 5 and 59, 7 ed. Parab) and kodaņļa- "bow". P. Thieme derives pedaņļa- from pretāņļa- "eunuch", whereas S. M. Katre, Ann. BORS. 20, 290, hazards the suggestion that $pe_r = \text{Pers. } b\bar{e}$. It seems to be an obscene abuse: the commentator renders luptadandakah. Perhaps -danda- here = śandha- "impotent" (p. 80). Like po- in poganda- (p. 50), pe- is prob. a Proto-Munda prefix (cf. pelava-). The semantic development of kodanda- cannot be traced, but since ko- is a common Proto-Munda prefix (cf. Pa. Pkt. ko-lamba-, p. 26), it is probably connected with danda. Wackernagel's explanation (Altind. Gramm. II, 1, 84) is to be rejected.

- 2. Like ga-da, wa-da, and other synonymous roots, da-da is used in two ways, its derivatives denoting 1) that which is stunted, short, maimed, blunt, small, young, insignificant, and 2) that which is shaved, bare, stripped, leafless, poor, unmarried, barren. The two semantic groups are not, of course, marked off by a sharp dividing-line. Since instances of the first sub-group will be discussed s.v. \dot{suntha} -, we shall here confine ourselves to a brief survey of the second group. The striking parallelism to the semantic development of da-ga (see s.v. $j\bar{angala}$ -) should be noted.
- 1) "bare, bald": S. duṇḍi, duṇḍge, ṭhuṇḍgut', etc. "bald", caḍra (f. caḍri), ceḍe, ceḍge, ceḍre, ceḍrec' "bare, bald" (ceḍrec' means also "dwarfish", cf. ceḍre, catrap' "blunt" from the 1st sub-class); ceṇḍen' "bare, without grass", M. Kh. cāṛrā, Ho cere "bald". Cf. Skr. lex. caṇḍila-, m. "barber" (Hemac., Halāy., Abhidhānar. 2, 434) 104), Pkt. canḍila-"nāpitaḥ" (Deśīn. 3, 2), Dardic kal. lāṇḍra "bald", Shina laṭa "bareheaded", etc.
- 2) "to bare a jungle": S. tạṇḍi "bare, a plain, an open field, meadow", tonḍaṅ "high ground, dry land, dry and barren", M. tôṇaṅ "jungle", tonāṅ-rāj "forest-country", M. ḍâṛ, ṭāṛ "upland", S. jara "to clear land by cutting down trees and brushwood and thereupon setting fire to the place" (contamination with jar-, e.g. jeret' "to burn, set fire to"), etc. Cf. Skr. lex. jhāṭa-, m.n. "forest", jhaṣa-, m. "a forest grown with grass, bare

¹⁰⁴⁾ Ho candel is perhaps a blending of *candel and the root discussed s.v. jāngala-(p. 140 ff.); cf. also S. cemdeń (= cendeń) "bare".

land, desert" (cf. jāngala- and S. muṇḍu "jungle, bush, forest, copse" : muṇḍra "to shave the hair"), Hi. ḍãḍ "high land not culturable for lack of water, sterile land", Gondi (Hoshangabad) jāṛī "jungle".

- 3) "to strip off, to pare, to chip": K. danda "rubbish, small pieces of wood", S. dula duli, dulau "to cut off, to lop, pare off", dolkao "to peel off, scale off", jharao "to pare chip", jhargao "to strip off", chalkao "to chip, cut off a little, clip, shave off, pare off", chulkau, id. (possibly blendings of da-da and da-ga), K. cilpa "splinter of wood or chip", etc. — Cf. Panj. dodrū "leafless", Skr. lex. randaka-, id. (according to Turner s.v. rāro; aphalataruh S'KDr.); Hi. chatnā "to be lopped, pared, pruned", chatnā "to clip, pare, lop"; Skr. lex. challī-, f. "bark", Pa. challi- "bark, bast", Pkt. challī- "skin. bark", Hi. chāl, chālā : Si. chila, id., etc. The IE. derivation proposed by Turner (s.v. chālā) is accordingly to be rejected, cf. Hi. chīlnā "to skin, excoriate, peel, pare, bark", Nep. chilnu "to peel", etc. ~ Pkt. chollai "skins", Hi. cholnā "to lop, skin, peel, pare", Beng. chol "rind" (see Turner s.v. cholnu) ~ Hi. chilkā "skin, bark, rind, shell, scale" (see Turner s.v. chilko), with which Skr. śálka-, m.n. "chip" (since Taitt. S., Kāṭh. S.), n., "scale of a fish" (Vāsav.), "rind, bark" (lex.) and śalla-, śallaka-, n. "bark" (lex.) are clearly identical. Skr. śilpa-, n. "decoration, ornament, art, craft" must have a different origin on account of silpá-"many-coloured, variegated" (Maitr. S.). As for śalākā- "chip, splinter, stalk, rod", see Gonda, Acta Orient. 10, 332 ff., Kuiper, ibid. 17, 18, n. 1; tandulá-, m. "husked rice" is ambiguous, but cf. túsa- "husk" (see s.v. bandá-).
- 4) "stem stripped of leaves" > "stalk, rod, shaft, staff, arrow": S. danta "thick stick", tathe "to beat with a stick" 105) (cf. Tam. tati "stick. staff, rod, cane" = tanțu, tanțam, id.; tari "to lop, chop off", Kann. dadi, tadi "staff, cudgel", danțu "stalk", etc.), dol "shaft of an arrow", jhata "stake, branch, pole", M. sotā "stick", etc. — Cf. Skr. daņģá-, Nep. dath "stalk, stem", $d\tilde{a}_{ri}$ "pole, staff", etc., $t\bar{a}ndro$ "a dry stalk or straw (esp. of rice)", Panj. tada, tadha "dry stalk of bajra", Lhd. tanda, id. Skr. dula-"arrow" may be inferred from dūlāsa-, m. "bow", which is only recorded in Wilson's dictionary (1819) and in the Jaffna Dictionary of Tamil (1842). Böhtlingk strongly doubts the correctness of Wilson's statement, but dūla- may perhaps be a deśī word on account of S. dol "shaft of an arrow" (cf. Kui dūrā "stick, staff, rod", Tam. tūlam, Tel. dūlamu, Kann. dūla "beam of a house", Hi. thūṭhī "small stump, stalk": thūthā "reduced to a stump, having the hand amputated, having its branches lopped, leafless"). Cf. further Beng. naṛī "stick" (Chatterji 530; from *laḍī?), Nep. jhaṭāro "a small stick, piece of wood; small log to throw at trees in order to bring dow fruit down" (~ Or. jhaṭā "dead bough"), Hi. chaṛ "shaft, pole, staff, stem, stalk, stubble" (~ Nep. char "bar", chari "stick, rod, walking-stick", Mar. sad, sadī "stubble, stalk, splinter"), candwā "shaft

¹⁰⁵⁾ Cf. Hi. thathānā "to strike, beat".

of a plough-share"; Nep. $s\tilde{o}th\bar{a}$ "cane" (Kum. soto, Panj. $soth\bar{a}$, $sott\bar{a}$, id., Beng. $s\tilde{o}t\bar{a}$, Guj. soto "staff"). Although Hi. $l\bar{a}th$ "stick" (<*lasti-, see Turner s.v. $l\bar{a}tho$) is prob. related, its formation is not clear (cf. Skr. yasti-, m., id.).

Skr. daṇḍa-, daṇḍaka-, m. also denote a "flagstaff on a chariot". The modern equivalent (Hi. jhaṇḍā "flagstaff", Mar. jhēḍā "standard, flag", etc.) is usually derived from *dhvajadaṇḍa- (thus Turner s.v. jhaṇḍā) or from jayanta-. Chatterji 479 however proposes to connect it with jhāṛ "tree". Although M. jhāṇḍā "pole with a flag attached to it", S. jhaṇḍa "flag, standard, to put up a pole with a flag" may be reborrowings from Aryan, the Aryan word itself is clearly a dialectal Munda variant of daṇḍa-. Cf. S. jhaṭa "pole" (perh. Kann. dhāla, ḍhāla "a large flag"?) and Skr. ruṇḍa- "staff of a balance" (Vāsav., see Gray, p. 211 of his edition).

- 5) "bare" > "poor": S. dhaṇdkao "to be stripped, destitute, poverty-stricken, utterly poor", hale dale "destitute, forlorn, shelterless, to be in want", toṇṭa "scarce, insufficient", laṇdha phucia "destitute, who has no property", laṛ baṛea "poor" (p. 98), nandan "poor", M. nāndān "poor, weak, powerless" (see pp. 81, 152). Cf. Pkt. dhella-, thalla- "poor" (Deśīn. 4, 16.5) 106), Nep. ṭāṭ "reduced to penury" (Guj. nāgo ṭāṭ "stark naked"!), Hi. laṭnā "to become poor".
- 6) "bare" > "having no husband or wife (= unmarried, widow), having no children (= barren), or parents (= orphan)": S. thật "barren, childless", M. ṭānṭi "barren, past the age of breeding", diṇḍā "spinster, virgin, unmarried, barren, bachelor", Ho dindā "unmarried", Kh. dindā "virgin" (: S. dende "tailless, half naked", hale dale "shelterless"); S. narca "unfertile, barren" (see below). — Cf. Skr. lex. śantha- "unmarried (akṛtadāraḥ Ujjvalad.)", ṣaṇḍha- (śaṇḍha-, ṣaṇḍa-) "impotent, eunuch" and its variant canda- "circumcised, having no prepuce" (Hi. lada, id.); randā- "widow, slut" is fem. of randa- "with the skin half separated from the limbs", see Tedesco, JAOS. 65, 94. Tedesco holds the original sense to have been "a shorn one" and quotes several parallel instances (note also Kann. boli "a head-shaven woman, a widow"). The meaning "widow", however, may also have developed from "bereft, solitary", cf. Nep. luṭho "a loose-living bachelor", Panj. laṇḍā, luṇḍā "tailless, without leaves, without wife and children", Skr. vanta- "tailless, unmarried (man)", Tam. moțțai "shaven head, unmarried young man", Kshm. landur "wifeless" (: Hi. laṇḍūrā "tailless"), Hi. raḍā "barren, unproductive, a widower", Nep. raro "widower" (: Beng. rara "sterile, leafless") over against rar, rāṛi "widow". Skr. lex. lañjikā- "whore" (lañjā- "adulteress") may be the same word (cf. Kum. rānī, id.), and lataka-, latta-, ladda- "a bad man" are paralleled by Lhd. lundā "of bad character", Panj. lundā "a shameless character", etc. (Tedesco 94a). Cf. Skr. lex. śunda-, f. "whore".

Nep. tharo "barren, sterile, unproductive (plants, land"), which cannot

¹⁰⁶⁾ Turner's suggestion (s.v. dhilo) is accordingly to be rejected.

be derived from Skr. starī- "barren cow" on account of \bar{a} (Turner s.v.), is rather connected with S. $th\bar{a}t$ (see above). Particularly interesting are Bashkarik š $\bar{o}r\dot{u}n\dot{q}$ (f. š $\bar{o}r\dot{u}n\dot{q}$), Palola š $\bar{o}run\dot{q}o$ "orphan", which contain a prefix š \bar{o} - (see p. 119) \sim Bashk. $rin\dot{q}$ "widow".

7) "solitary" (cf. S. thaṭkat' thuṭkut' "left alone"): Hi. chaṛā "separated, solitary, alone" is identical with M. cāṛṛā "bald, baldness". Cf. further Ass. luṭhuṅ-ṭhuṅgīyā "destitute, homeless" (p. 141). Prob. Hi. chuṭṭā "separate, single, bare" (Nep. chuṭṭo "separated, divided, alone": chuṭnu "to get loose, to part from", Skr. lex. choṭayati "cuts") also belongs to this word-group. Cf. Pa. chaḍḍeti "to abandon, leave" (hardly < tyakta-, Tedesco p. 97) and the rhyme-words Nep. phuṭṭa, phuṭṭo (p. 100).

A great many NIA. forms with initial r and l are quoted by Tedesco. p. 94 f. They should be connected with Hi. $d\tilde{u}d\bar{a}$ "bullock with one horn", Panj. $d\tilde{o}dr\tilde{u}$ "leafless" (see Turner s.v. $d\tilde{u}ro$ "maimed"), Nep. thuto "polled, hairless, hornless" (also "stump of a tree" = Kh. dhutu), etc.

There are several derivatives from da-da with initial nasal, some of which have already been mentioned above. Cf. S. nandan "impoverished, destitute", Beng. națī "stick" (unless from *laḍī), Middle Beng. nāṭā, nāṛhā, mod. Beng. neṛā "shaven-head" (Chatterji 498, 530), Nep. nāṭho, Kum. nāto "bachelor" (see above, sub 6); closely related, though belonging to the other semantic sub-group: Hi. nāṭā "short, dwarfish, dwarf, young bull (not yet broken in), vile, depraved" (cf. M. nāṭā "dwarf"), naṭiyā "a short or diminutive man, a bullock of an inferior stock"; cf. Beng. nāṭuyā "profligate", Mar. nāṭhā "vile" 107), perh. also Nep. nacci "a short but good-looking young woman", (cf. Beng. nannā "small, tiny") and Pkt. nandana-, m. "servant" (bhṛtyaḥ Deśīn. 4, 19) < "*boy" (pp. 99, 152). Hence nanda-, n. "ikṣunipīḍanakānḍam" (Deśīn. 4, 45) may be a variant of danda-, although this is merely conjectural. Since the Mhbh. nārāca-, m. is used in Sanskrit as a term for a certain kind of arrow. Uhlenbeck proposed to connect it with nadá-, m. "reed". This suggestion was however rejected by Lüders, Philologia Indica 555, because d never becomes r in Sanskrit. Since d > r(r) is a very common sound-change in Proto-Munda. the question arises whether nārāca- may have been adopted from that source. In the Santali dialect studied by Campbell there occurs a word narca "unfertile, exhausted (soil), barren, past the age of breeding (cow)". a rhyme-word of marca "bare, physically poor, deteriorated, pune, exhausted" (M. mārcā "fallow"). Narca may stand for *naṛ-aca, a derivative from *naṛa (cf. Hi. nāṛā "stubble"), just as marca is derived from wa-ḍa (p. 104 f.); as for -aca-, see pp. 118, 138. Hi. nāṛā is synonymous with char "stubble", and S. narca with M. tanti (vide sub 4 and 6); since initial n and m are mostly the nasalized variants of dt and wbp, $n\bar{a}r\bar{a}$ and narca must also belong to $d\alpha$ - $d\alpha$. Skr. nārāca- may accordingly be

¹⁰⁷⁾ These words should accordingly be separated from the descendants of Skr. nasta-and nata- (Turner s.v.v. nātho and natuwā).

derived, together with S. narca, from $d\alpha - d\alpha$ "bare, stalk, shaft of an arrow" (see above, sub 4). Does the same hold good for na $d\hat{a}$, m. "a species of reed", with which Uhlenbeck connected it?

Naḍá- is attested since the RS. (naḷáḥ 8, 1, 33) and is the common form in the Vedic literature, whereas the Classical works (since the Mhbh.) use nala- instead; see Lüders, Philologia Indica 555. A variant with d seems to occur in RS. 1, 32, 8 nadáṁ ná bhinnám, which is now generally translated "like a broken reed" (Pischel, Ved. Stud. 1, 183 ff., Oldenberg 108), Geldner, Macdonell, Renou), cf. naḍáṁ ... bhindánty áśmanā Ath. S. 6, 138, 5. The adjectives naḍvánt- and naḍvalá- (Pāṇini and later works) contain a shorter form naḍ-. Cf. further nāḍi- "tube, pipe, flute, vein, pulse" (since Ath. S., Kāṭh. S., S'at. Br.), nāḍi- "vein, artery, any tubular organ of the body", nāla-, n., "a hollow stalk, esp. of the lotus, pipe, tube, handle". As for nalina-, cf. malina- from mala-.

If the interpretation of Rigvedic nadá- is correct, it is only reasonable to suppose that it is identical with nadá. This was, indeed, the opinion of Ludwig and Pischel, but Wackernagel, Altind. Gr. I, 173, considered their identity doubtful and the modern works on IE. etymology derive nadá- from IE. *nardo-, *nardho- (mod. Persian nāl "reed, stalk", Pashto $n\bar{a}_{\bar{i}}a$ "stalk of a flower", Greek $r\acute{a}o\vartheta\eta\xi$) and keep it apart from nadá-, which is connected with mod. Persian nai "reed", Lith. néndré, id. (IE. *nedo-). See W. Geiger, Etymologie und Lautlehre des Afghänischen 17 (183), Persson, Beiträge zur idg. Wortforschung 338, 817, n., Walde-Pokorny, Vergl. Wörterb. der idg. Sprachen II, 317 f., 329. The problematical and (from the standpoint of Sanskrit) arbitrary character of this explanation is clear. Variants of the same word with dental and cerebral are not uncommon in Sanskrit (see Wackernagel, l.c.). According to the general view the cerebral must be due to a later phonetic change. parallel to the Prakrit development. It has however been pointed out above (s. vv. udumbára- and kubja-) that in many Proto-Munda loanwords the cerebral is the original sound, the dental in the Vedic equivalent being due to a tendency of the Vedic language to avoid the cerebral (which was considered a characteristic of the vulgar speech) and to substitute the dental for it. If we should apply the same explanation to nadá- : nadá- we should have to conclude that the form with d was already used in common speech to such an extent that the tendency to substitute d was unable to assert itself. This would imply, however, that nadá- is a foreign word like udumbára-. As a matter of fact, for a word for "reed" this assumption would be far from improbable, the more so since *nardo-/*nardho-(Walde-Pokorny, II, 317) does not look like a genuine IE. word. (I do not enter into a discussion of Skr. nalada- which Horn, Grundr, der neupersischen Etym. 237, explains as a Sanskritization of Greek ráodos, whereas others derive Aram. nardā from Sanskrit, νάρδος being a borrowing from Aramaic; Lüders separates nalada- from nada-).

¹⁰⁸⁾ But see also his note on 1, 179, 4.

Among the many Hindi words of Aryan derivation (naṛ, naṛlā, nāṛ, nāṛ, nāṛ, nāṭ, nālī, nālī, nālī, etc.) we also meet with some variants with r, as narī, narrī (also dial. naṛṭā, naṭạṭā, naṛṭī, naṭạṭī) "windpipe, gullet, throat", which remind of S. nạṇḍri, naṛṭi, id. Notwithstanding the metaphoric sense of the last words it does not appear that they are borrowings from Aryan (as is the case with S. naṭi "pulse"). The nasalization in naṇḍri, it is true, can be due to a quite recent development (such a nasalization occurs even in English loanwords), but naṭṛṭi shows the normal Munda change of ṛr to rṛ and presupposes a Munda original *naḍri. It is not clear how this form could have been borrowed from Aryan.

On the other hand, many of the NIA. words which are usually connected with Skr. nadá- are used in senses which clearly betray their derivation from dα-dα, cf. Ass. narā "stubble" (: nal "stalk") 109), Kshm. nal "stalk" (: nar' "reed"), Hi. nal "bamboo-joint", Mar. nadne "to clear a field of stubble", na! "lotus-stalk", Or. naṛā "rice-straw". See Turner s.v. nal. These words point to an original meaning "bare, leafless" (see above, sub 4 and 2), from which also the meaning "reed" may have developed. Perhaps Skr. mṛṇāla-, n. "lotus-root or fibre" (since Mhbh., Rām.) can furnish the definite proof of the Proto-Munda origin of nadá-. Pali has muļāla-, muļālī- "stalk of a lotus", which Geiger § 43 regards as the Middle Indian equivalent of $m_{r,n}\bar{a}la_{r}$. The evidence for the change n > l is however extremely slight (as for velu-, see p. 34); on the other hand, Vedic mulāli-, f. (or mulālin-?) "edible root of lotus" is evidently the same word (PTS. Dict., Tarapada Chowdhury, JBROS. 17, 1931, 46). If so, we have probably to do with two Proto-Munda variants *mer-nala and *mu-dala. It should be noted that in some Dardic dialects there occurs a word for "root", which seems to be closely related, e.g. Bashkarik nēr, Palola näṛī, Gawar Bati nāṛ. We may accordingly conclude with a reasonable degree of certainty that nadá- is a nasalized variant of dandá- and consequently of Proto-Munda origin.

42. $d \bar{a} d i m a \sim$, m. "the pomegranate tree" (n. its fruit).

Since Mhbh., Rām., Suśr. Also dālima- (Amaruś., cf. Pa. dālima-). dāḍimba- (Trik., comm. of Maheśvara on Amara 2, 4, 64), cf. Hi. dārim. dālim 110). Lüders, Philologia Indica 556, regards dāḍima- as a Prakrit word and derives it from Pkt. dāḍhā- (Pa. dāṭhā-) "tooth", the original form having been *dāḍhimant-. This explanation would be plausible but for the variant dāḍimba- (cf. Or. dārimba, dāļimba, Hi. dārimb, Mar. dāļīb), which this theory fails to account for Bagchi, Pre-Aryan and Pre-Dravidian in India, Introd. p. XXVIII, suggested an Austro-Asiatic derivation, which however is unacceptable (Malay buah "fruit").

¹⁰⁹⁾ See above on Hi, nārā "stubble": Skr. nārāca-.

¹¹⁰) For loanwords in Indonesian see Lafeber, Vergelijkende Klankleer van het Niasisch I, 96, who also points to Hebrew rimmon, Coptic erman, etc.

The pomegranate, whose many seeds so strongly suggest the idea of fertility is usually denoted by names meaning "round, protuberant, pregnant", e.g. Skr. lex. pindīra-, n. (Trik.), Pkt. pindīram "dādimam" (Deśīn. 6, 48): Skr. pinda- "a round mass, lump, globe, ball, knob", pindikā- "a round swelling or protuberance", and Tam. kaļu-muļ from kaļu- "to crowd, be full, be abundant". Note that the Tam. word also denotes the Cardamom-plant (= Skr. bahulā-!). As for dādima-, dādimba-, its radical element is dimb-, cf. dimba-, m. "egg", lex. go-dimba-, go-dumba- "water melon", godumbā-, f. "Cucumis maderaspatanus, colocynth" (comm. on Caraka), lex. kurumba- "a certain kind of orange". See pp. 24, 66, cf. Kh. dimbu "cucumis", tumbāi "pumpkin", Ho dambau "custard apple".

Another derivative from the same root is Skr. jambīra-, m. "citron tree" (n. its fruit), Suśr., Bhāg. Pur. The lexicographers record many variants, e.g. jambhīra-, jambhara-, jambhala-, jambha-, jambhin- (the last of which is due to popular etymology); see Turner s.v. jimir. It owes this name to its roundish shape (cf. Ho simri "bean") and, probably, to its "fertility" (cf. the synonyms bījapūra-, phalapūra-). A synonym of jambīra- is Skr. lex. nimbū-, nimbūka-, m. "citron tree" (Rājanighantu), cf. nimbūkaphalapānaka-, n. "lemonade" (Bhāvaprakāśa). The origin of this plant has been amply discussed by several American scholars to whose articles I may refer for particulars and bibliography 111). H. W. Glidden presumes its original habitat to have been the Eastern Himalaya (p. 393), accordingly an ancient Austro-Asiatic area, but does not hazard to explain its name (p. 396). As the plant and its name have spread over a vast area it is hardly possible to trace the origin of the name and to elucidate the relations between the variants found in India and Indonesia, e.g. 1) Hi. nībū, Or. nembu, Panj. nimbū, Mar. nībū, Nep. nību 2) Nep. nibu, nibuwā, Beng. nebu 3) Nep. Kum. nimuwā, Ass. nemu, Hi. nīmū, līmū (see Turner s.v. nibu); cf. S. lembo, M. lembu (So. lémbāū- 1s a loanword according to Ramamurti, Engl. Sora Dictionary). Whatever may be the origin of Malay limau, Jav. limo, the Austro-Asiatic character of nibu-nimu-is clear and there can be little doubt that these forms are nasalized variants of dib-/dimb-112). Cf. lex. limpāka-, m., id.

Skr. jambū-, f. "rose apple tree, Eugenia Jambolana" (since Mhbh.) is apparently a derivative from the same root.

43. dundubhi-, m. "drum" 113).

Since the RS., in common use throughout the Sanskrit literature. As it

¹¹¹) See Laufer. The Lemon in China and Elsewhere (JAOS. 54, 1934, 143—160), Miss Helen M. Johnson, The Lemon in India (ibid. 56, 1936, 47—50). H. W. Glidden, The Lemon in Asia and Europe (ibid. 57, 1937, 381—396).

¹¹²⁾ The derivation of *nimba-*, name of the Azadırachta Indica (Hi. $n\bar{\imath}m$) is unknown. The explanation proposed by Johansson, Etymologie und Wortgeschichte 34, Charpentier, ZDMG. 73, 140 ff. ($<*ni-\bar{\imath}mra-$) is hardly correct.

¹¹³⁾ Also dundubhī-, e.g. dundubhyaś ca mahāsvanāh, Mhbh. 7, 82, 4 Bomb.

looks like an onomatopoea (Uhlenbeck, Wackernagel II, 1, 9), its etymology has not been the object of discussion. The shorter form dundurecorded by the S'abdaratnāvalī suggests a formation dundu-bhi. The following words, however, will show that the radical element of dundubhi-is dubh-. The shorter form must accordingly be due to an incorrect analysis of the word by late lexicographers, parallel instances of which are given elsewhere (see s. vv. khinkira-, mukura-, etc.).

Dunduma- is not attested but its existence may be inferred from dundubher dundumāyitam, Uttararām. 6, 2 (not recorded in the Pet. Dictionaries and Schmidt. Nachträge); cf. dundama- (S'abdaratnāvalī). -dum- is the nasalized variant of -dubh-.

Dindima-, m.n. "a kind of drum" (Mhbh., Rām., Hariv., Mrcch., Hitop., Vikramānkad. jayadiņdima- 6, 11; 8, 15. etc.). In Rām. 5, 10, 44 it is mentioned as different from ādambara- (in 45); likewise Mhbh. 9, 46, 58. As the dindima- is beaten on the occasion of proclamations (Mrcch Parab 254, 2; 259, 2: 267, 8 etc., udghosadindima- Kathas. 91, 23) 114) it is sometimes considered a synonym of ghosana-, cf. the commentary on Daśak. 138, 3 tadvairināmaghosanaih, which renders ghosanaih as dindimaih. The feminine dindima- is sometimes met with (Hariv.). Besides this concrete acception of the word, dindima- is also used to denote a humming sound, esp. of elephants, e.g. Vikramankad. -dantidindimah 15, 1, ripuvāraņa-diņdimadhvani- 15, 20, abhramubhujanga-diņdimadhvāna-5, 63; cf. Kādamb. 63. 5 Pet. mukha-dindimadhvani-janitaprītih "delighting in making a humming sound with the mouth" (said of a young boy who imitates an elephant) 115). In Vikram. 13, 66 (spoken to a cloud) tvadī yadhvanidindimam vinā the dull rumbling sound of the thunder seems to be meant. As an adjective it is used according to Böhtlingk in Kādamb. 26, 13 Pet. abhiganda-dindimānām madhulihām, although Miss Ridding's translation "the bees, who ought to be the drums on the elephant's frontalbones" seems possible. However, the abstract noun in jaladvipānām madadindimatvam Vikr. 9, 124. suggests an adjectival use of dindima-. Pa. dendima-, dindima- means only "a kind of kettle-drum", similarly Hi. dindim "a kind of small drum or tabor", dimdimī (= damrū, see below). Wackernagel II, 1, 9 reckons dindima- among the words of probably onomatopoeic origin.

tumbukin- "a kind of drum" (Böhtlingk).

āḍambara-, m. "drum. noise, sound", since āḍambaraghātá-, m. "drummer", Vāj. S. 30, 19; cf. S'at. Br. 14, 8, 12, 1 (accented āḍámbara-, whereas the grammaticians give āḍambára- or āḍambará-; Sāyaṇa takes it as yathā ḍambarasya); Mhbh. 7, 82, 4 (kṣudrapaṭahaḥ Nīl.), 7, 72, 11 (tūryaravaḥ Nīl.), 9, 46, 58, Rām. 5, 10, 45 (in the last two passages together with

¹¹⁴⁾ Similarly Tam. parai-y-ați-, parai-y-arai- "to publish by beat of drum".

¹¹⁵⁾ Miss Ridding's translation (p. 54) "full of joy at the sound of the bell held in his mouth" is hardly correct.

dindima-). Wackernagel I, 177: "mit Verdacht fremden Ursprungs" 116).

lambara- "a kind of drum" (Bṛh. Ār. Up.), corresponding to (ā)ḍambara- in the S'at. Br., may be compared to Pa. āļamba-, aļambara-, ālambara-, the Middle Indian form of āḍambara-. But the Vedic word may as well represent a Proto-Munda variant of ḍamb-, cf. also lambāpaṭaha- (Harṣa-car.), lex. lampāpaṭaha- (= pratipattipaṭahaḥ, ṭaṭṭarī), and lambate, lambhate, rambate "sabde".

Pkt. heramba-, m., id. (= dindimah Deśīn. 8, 76) contains the same root variant as the preceding word and the Proto-Munda prefix he-, hi- (cf. hingu-, Hidimba-, hindolayati, etc. 117).

dimbima- (= dindima-), Harṣacar. 219, 14. Cf. dimba- "a humming-top" (Naiṣ.), the name of which refers rather to the sound produced by it than to its roundish form (cf. dimba-).

damaru- m. "a kind of drum" (Rājat., Prabodhac.).

damarin-, do. (Bhāg. P.), cf. Hi. damrū (damrin) "a tabor or small drum shaped like an hour-glass (held in one hand and beaten with the fingers), anything shaped like an hour-glass", Mar. damru. Is this drum thus named on account of its shape? This is the opinion of Przyluski J. As. 1926, I, 34 f., who observes that it "ressemble à un sablier, c'est-à-dire à une gourde à deux renflements qu'on aurait coupée de manière à ne conserver deux hémisphères". He therefore connects its name with tumba-, udumbara-(q.v.). On the other hand damaru- cannot easily be separated from the verb damati with which it is combined in damad-damaru-dāmkṛtiḥ, Pra-bodh. 55, 6 etc. Cf. Turner s.vv. damaru, dampho, daph.

Pali dudrabhi- "a kettle-drum" occurs a few times beside, or as a variant reading of, dundubhi-. It possibly stands for *dur-dabhi-, cf. daddabha- "a heavy indistinct noise, thud" (Jāt. III, 76), daddabhāyati "to make a heavy noise, to thud" (Jāt. III, 77). The last words are to be referred to a root dabh, cf. dabhakkam (indecl.) "a certain noise of falling fruit" (Jāt. III, 77). As a variant reading of dabhakkam is handed down the form duddabha-, and for daddabha- a variant duddabhayasadda-occurs. Rhys Davids and Stede regard the last word as a Sanskrit gloss (= dundubhyaśabda-), but then dudd- cannot be correct. I think the various forms clearly point to the existence of prefixed words *dur-dabha-, *dar-dabha- by the side of dabh(akka-)-. Hence dudrabhi- may easily be explained as a case of metathesis.

All the words quoted may be referred to a common root \$\dar{q}a-ba\$, which appears as \$dubh-\$ (\$dun-dubhi-\$), \$dum-\$ (\$dun-dumayita-\$), \$damb-\$ (\$\dar{a}dambara-\$), \$dimb-\$ (\$\dar{q}imbima-\$), \$\dar{q}am-\$ (\$\dar{q}amaru-\$, \$\dar{q}amarin-\$), \$\dar{q}im-\$ (\$\dar{q}in-\dar{q}ima-\$). And this very root we find in modern Munda, cf. \$S. \$\dar{q}bb0\$, \$\dar{q}hbb0\$, \$\dar{q}hbb0\$, \$\dar{q}hbb0\$ (\$\dar{q}hbb0\$) "dull,

¹¹⁶⁾ Kittel's suggestion (āḍambara- < Drav. *āḍum vare, Tam. paṇai "drum", see Ind. Ant. 1, 237) is of course unacceptable.

¹¹⁷⁾ Heramba- "buffalo" (Mālatīm.) is a Drav. word, see Kittel, Ind. Ant. 1, 239, Gundert, ZDMG. 23, 519, Caldwell, Compar. Gramm.. 2nd. ed., p. 464, Bloch, BSOS. 5, 740, Ramaswami Aiyar, JAHRS. 10 (1937) 62.

flat in sound (kettle-drum and dhol)"; lobhor lobhor, adv. "dull" (sound of drum), daba dubu "the sound of continual drumming, to drum confusedly", debe debe "the sound of the kettle-drum", dubu, dubur "to drum at (when outcasting)"; dubu dubu, dubur dubur "the sound of the kettle-drum when constantly beaten, rolling, drumming; to beat the drum"; duban duban, luban luban, adv. (the sound of the kettle-drum); dhabun dhabun, do. of the big kettle-drum, the damaura; dhombak' dhombak' "with the sound of drums (dhol)"; damana "a big drum (prob. the same as the following)"; damaura, damaua, dama tamak "a very large kind of drum (no longer seen in the Santal Parganas)"; tamak "a kettle-drum" (prob. reborrowed from Hi. tāmak), tumdak' "the dancing-drum", M. dumān, Ho duman "drum", M. damua "a kettle-drum", dhāplā "a kind of drum, tambourine", K. dubru "hewed drum", timki "drum (skin on earthen vessel)", dhapo "tambourine", So. dēb- "to beat a drum".

Tam. tuṭumai, Tel. tuḍumu, Kann. tuḍubu "a kind of drum", Kann. tapaṭe "tambourine", and Panj. ḍibḍibī "small tambourine", Nep. dibdibe "a toy drum made of clay", ḍamphu "a small drum or tambourine" are loanwords from Munda.

S. dodom dodom "the sound of drumming the dhol" (onomatopoeic according to Bodding), and dodom dodom "the sound of Doms drumming when arriving at a village", the latter of which is obviously connected with S. Dom, must be variants of the same word. S. Dom denotes "a certain low Hindu caste, individual of that caste. They are small agriculturists and musicians (drummers)" = Hi. dom, domb, Skr. domba-, Pkt. dumba- ("śvapacaḥ", Deśīn. 4, 11). Since dodom dodom is on the other hand connected with dudumjak' "a kind of dance (referring to the beating of the kettle-drum, tamak)", the Dombas must have been named from their drums, like the Pariahs (Tam. paraiyan from parai "drum"). Przyluski's suggestion that the name of the Dombas is ultimately derived from that of the gourd (J. As. 1926, I, 35) should be corrected in this sense. To his article reference may be made for further particulars.

44.
$$p = n g u - \text{"lame"}.$$

Since Ath. V. Pariś. and Mhbh.; also paṅguka-, paṅgula-, cf. Pa. Pkt. paṅgu-, Pa. paṅgula-. There are many variants which may be classed according to their initial consonant:

initial v-: Skr. vaṅku- "going crookedly" (?), Pkt. vaṅga- "mutilated", Kshm. woṅgu "lame", perhaps Mar. vaʾg "douleur sourde (à la suite d'une contusion)" (which Bloch 404 derives from Skr. vyaṅga-), Panj. viṅgã "crooked";

initial b-, bh-: Rom. bango "bent, lame", Kum. bāno "crooked", Nep. bāngo "crooked, bent, twisted, perverse", Panj. bingā, vingā "crooked";

Hi. $b\tilde{a}k\bar{a}$ "crooked", Beng. $b\bar{a}nkuro$ "short, hunch-backed" ¹¹⁸), $beng\bar{a}$ "left-hand"; Skr. bhanga- "lameness, curve, crooked path", bhangura-"curled, wrinkled" (contaminated with a derivative from bhanj-), Hi. Lhd. $bheng\bar{a}$ "squint-eyed", Beng. $bhengur\bar{a}$ "crippled", Ass. $bhengur\bar{a}$ "crooked";

initial p-, ph-: Skr. lex. phakka- "a cripple", Pa. pakkha-, id., Hi. $pang\bar{a}$ "crooked, deformed" (beside $p\bar{a}gu$, $p\bar{a}g(u)l\bar{a}$ "lame, deformed, crippled"), Mar. $p\bar{a}g$, $p\bar{a}g\bar{u}$, $p\bar{a}gl\bar{a}$ "lame, maimed, deformed", etc. Hi. $p\bar{a}g\bar{a}$, $p\bar{i}g\bar{a}$ "thin, weak, delicate, tender", Si. $p\bar{a}go$ "weak" seem to belong to a different word-group.

The Proto-Munda origin of these words is apparent from the ablaut a: e: i: o and the variation p:b:bh. Cf. S. pakor "to twist, distort, misrepresent", $p\tilde{a}k$ "to twist, twine, turn, pervert", bakra "perverse, insincere, unscrupulous, crooked", bakre "to pervert", dhakuc' bakuc' "crooked, lame, limping", bak'bhehor "crooked, winding, tortuous", makre "wrong, left (cf. above Beng. $behor}$ "left-hand"), perverse, awry, awkwardly", M. $p\bar{a}kre$ "one having a deformed leg". Since these words point to a root ba-ka, Skr. $pahor}$ probably represents a Proto-Munda original *pa-hu. The connexion of Skr. $mahor}$ "tottering, reeling" and vakra- "crooked" (Ath. S.) is doubtful.

45. pațaha-, m.n. "a kettledrum".

In the epics and the class. lit. (see Pet. D., and cf. prayāṇa-paṭaha-, Harṣacar. 203, ed. Parab², Vikramānk. 18, 106); Pa. paṭaha- "a kettle-drum, war-drum". Beside this word there occurs paṇava- "a kind of drum" (ep., Mṛcch.), sometimes as v.l., as Pañcat. 1, 15, 25 Bomb. (Edgerton: paṇava-), and in Pali (see Rhys Davids and Stede). The derivation from praṇava- (Böhtlingk, Uhlenbeck) is hardly correct. There must have been some difference between the two kinds of drum, cf. Tamil paṇavam "a small single-headed drum": paṭakam "drum of the akamulavu class, small drum, tabor, kettle-drum, war-drum".

With suffix -ha- (cf. kalaha-, maṭaha-, etc.) from pat/pan-. On account of maḍḍu-, maḍḍuka-, maṭṭa- (names of drums) the root may originally have been ba-ḍa (wa-ḍa). Since this nasalization points to Proto-Munda, Tamil paṇi, paṇai "drum" are perhaps Munda lws. Cf. S. bhoṭ bhoṭ "with a pattering sound (as of falling hail)", paṭ paṭ, paṭ paṭao "to crackle, patter", paṭas paṭas, paṭas puṭus "with successive sounds (firewood being broken, falling hail-stones, etc.)", peṭes peṭes "with sharp cracking, clicking, crackling sounds", paṭak' paṭak' "snappishly, rattlingly", bhud bhud "with a pattering, thudding sound (as mangoes continually falling down, hail)", bhad bhad, id. (cf. H. bhadbhadānā "to make a sound by striking two bodies together, strike repeatedly"), bid bid "with a

¹¹⁸⁾ Chatterji, Journ. Greater India Soc. III, 1936, 48 f., compares Sakai běň-koň "crooked", Semang beňko "curvature", boňko "hunchbacked" (Blagden's Vocabul. B 177) but these words are identical with Malay beňkok.

pattering sound (of people heard running at night)", bidir bidir "the drumming of rin'ja", bhidir bhidir "the sound of the dancing-drum, when beating a certain time (rin'ja, karam dancing)", phetan phetan phetan phetan "the sound of dancing-drums and kettle-drums" (onomatop. according to Bodding), etc.

46. patámga-, m. "grasshopper".

Beside patamgá- "flying, bird" (RS., Ath. S.) there occurs since the S'at. Br. a word patámga-, m., which denotes several insects, esp. grasshopper, butterfly or moth. In Pali the word is exclusively used for the grasshopper; the Pa. word has a cerebral (paṭaṅga-), which Bloch, BSOS. 5, 739, explains through Dravidian influence (Tel. paḍu "falling") 119). The PTS. Dict., however, points to Skr. lex. phaḍiṅgā-, f. "cricket" (S'abdacandrikā) and presumes that this word has been influenced by pataga-. As a matter of fact, the modern Aryan languages have interesting words for "grasshopper" which cannot be derived from the Skr. root pat- "to fly", cf. Ass. pharin "any winged insect", Nep. phaṭyānro, phaṭenro "grasshopper, cricket", Beng. phaṛin, Hi. patiṅgā, phatiṅgā, phariṅgā "grasshopper".

The same initial aspirate recurs in the Skr. root *phal-* which is not recorded (apart from *phal-* "gatau") in the Petersb. Dictionaries and in Schmidt's Nachträge. Böhtlingk quotes one instance of *ut-phal-* "aufspringen" (Bālar. 16, 39) s.v. *phal-* "to burst". A second instance occurs in Kathās. 108, 132 *utphalan* "bouncing up", where Brockhaus's text is corrupt (see Speyer, Studies about the Kathās. 82, 144). As an additional example may be quoted Vikramāńkad. 16, 39

śvā nirgataḥ kanakaśṛnkhalayā sahaiva kopān nirīkṣya viśato gahane varāhān ruddhas tayā viṭapikaṇṭakakīlakeṣu sākrandakaṇṭhakuharo muhur utpaphāla.

The noun phāla- is recorded from Vikram. 13, 77, utphāla- from Kathās. 26, 20. Add kṛtaphālam (patanti) Vikram. 17, 59. Cf. Hi. phālnā "to spring", Nep. phāl "leap, jump". The corresponding verb in Nep. is however, not phālnu (which means "to throw out, displace"), but phādnu "to jump, caper", (cf. Hi. phādnā, Beng. phādā, Kum. phādno, Mar. phādnē "to leap"), which points to a root paḍ-. A similar root occurs in words meaning "kick", e.g., Pkt. pattharā-, paḍḍalā-, paḍḍuā- "kick" (cara-naghātaḥ, Deśīn. 6, 8). A comparison of Munda words tends to show that these word-groups are connected, the original meaning being that of a quick, spasmodic movement (which also accounts for Hi. phaṛphaṛānā

¹¹⁹) According to the Abhidhānappadīpikā it has t when denoting a bird. See Geiger § 42 (vaṭaṁsa-, of unknown origin, is no evidence for a development t > t).

"to move convulsively", Guj. phadphadvũ "to flutter", Nep. pharpharāunu "to twitch, flutter, flap", etc.); cf.:

M. p(h)āda, Ho padā, K. pandā "to kick", S. phanda "to kick backwards", phadgal "to kick out", phadruk' "to kick, move the limbs spasmodically", phantil, phentor, phen'cor "to fly off, rebound, spring up or back" $(M. p(h)\bar{a}ndil$ "to spurt out, to fly off"), phente phere "jumping about" (contaminated with a word meaning "twisting", see s.v. mendha-), perel perel "with jumps, leaps, bounds", pedel pedel "quickly, jumping along", pidga "to gambol, run about, twist, jerk", piriak' piriak' "to make spasmodic movements with the legs or arms", pidgic" "to pinch, sting, start up, to be startled, kick" (e.g. duhaue jokhec' gaiye pidgic'ena "while they were milking her the cow kicked"), piḍic', id., pidrak' pidrak' "with a sudden movement of arms and legs, to make such movements, to kick, hit out", padak' padak', padgak' padgak' "bounding, jumping along", panduc' "to run away, flee". If bid bid "hurriedly, to run about" and bidra bidri "hurriedly" are connected, the root is ba-da. Cf. kharpatao, khar barao "to be restive, jump and prance, fidget", khat pat(a) "restless, noisy, at variance". There may be contamination of different word-families but it is hardly possible to draw a dividing-line between them. As for the meaning "to flutter" (Nep. pharpharaunu "to twitch, flutter, flap", phatphatāunu "to struggle, flap about, flutter") cf. S. phada phud "to flap, flutter", phad phad "with a do. sound", phar phur "to flutter, rush".

47. $p u \dot{n} k h a$, m. "the lowest (feathered) part of an arrow".

Since Mhbh. Rām. The same sense is given for Tam. puṅkam, whereas the Pet. Dict. defines it more exactly as denoting: "der unterste, mit der Sehne in Berührung kommende Theil des Pfeils, in dem der Schaft und die Federn stecken". Cf. Pa. poṅkh'ānupoṅkham "arrow after arrow, constantly". Bloch 371 suggests a connexion with Mar. pōkh "extrémité d'une ligne, d'une rangée", which is not, however, quite clear. Charpentier, ZDMG. 73, 130 f., derived puṅkha- from *pukkha- and compared puccha-(unacceptable) 120). In a recent publication (Transactions Philol. Soc. 1945, 110) Burrow explains it as a Dravidian loanword on account of Tam. puluku "arrowhead", Kann. piluku, pilku "the lower part of an arrow which comes in contact with the bowstring and contains the feathers and shaft". If so, puṅkha- would be based on a Dravidian form with the liquid assimilated.

Cf. however S. $ph\tilde{o}k$ "the notch of an arrow for receiving the bow-string, the notch at the top of a post, to cut a notch", $pho\tilde{n}ke$ "with openings in walls, with gaps, holes", $ph\tilde{a}k$ "a gap, an opening, breach, chasm" (possibly a reborrowing, cf. Hi. $ph\tilde{a}k$ "cut, opening, aperture in fruit, etc.",

¹²⁰⁾ Turner s.v. $pw\tilde{a}kh$ suggests some connexion with Pkt. $pa\dot{m}kha$ - < pak, sawing, feather".

phāknā "to open out, to part asunder, to gape", Beng. phāk "empty space", phòkar "hole, slit" 121), etc.). Root ba-ga "wide apart, bifurcating", cf. beg bege "wide open, to gape", ban ban, bon bon, bhon bhon, pan pan "yawning, gaping", M. phon "to have an opening", S. bangorae, bengoak', begewak' "with mouth wide agape", bhuk' "hole, cavity" (cf. Skr. lex. bhūka-, m.n. "hole"). NIA. derivatives are, e.g., Guj. bhōk "hole", Mar. bhōk "hollowness", Nep. bhwān "chasm, hole" (Turner 485), and Hi. phokā, Kshm. phōka "hollow". Cf. Khasi wan "wide open" and Palaung bōn "hole", Central Sakai bēmbūk "hollow (in tree)". S. phōk cannot accordingly be connected with the Drav. words.

48. pundárīka-, n. "the white lotus".

Since RS. 10, 142, 8 in common use (see Macdonell and Keith, Vedic Index I, 526). From *puṇḍarī-, cf. puṇḍari-srajā "a wreath of lotus leaves" (TS., TBr.), and puṇḍarya-, pauṇḍarya-, n. (= prapauṇḍarīka-) "a certain herb used as a remedy against eye-diseases".

The primary sense must have been "white" (see below). This leads us to suppose a connexion with pāṇḍú- (since S'at. Br.), pāṇḍura- (since Suśruta, Varāh. Bṛh. S.) "whitish, yellow, white, pale", Pkt. paḍḍa- "white". Weber connected these words with palitá- "grey" (Greek πολιός, etc.), which was accepted by Lidén, Studien zur altind. und vergleich. Sprachgesch. 90, Wackernagel. Altind. Gramm. I, 170, Petersson, Studien zu Fortunatovs Regel 54, etc. Although this explanation has become something like a dogma (e.g. Specht, Der Ursprung der idg. Deklination 117) 122), its problematical character is obvious when we compare Pkt. paḍḍa-. IE. formations *pel-do- and *pēl-ndu- (which one would have to posit in explanation of paḍḍa- and pāṇḍú-) are mere theoretical constructions. There is hardly one of the word-explanations, for which Lidén assumed the suffix -ndo-, -ndu-, which stands a closer examination. Pkt. paḍḍa- rather points to a Dravidian or Proto-Munda origin of pāṇḍú-

Cf. S. poṇḍ "white", poṇḍe "a common nickname of Santal girls who are very light-coloured when small", poṇḍe ạk "a whitish variety of the sugar-cane", Mahle poṇḍ, M. Ho puṇḍī, Bh. poṇḍē, Kw. puṇḍī "white"; S. peṇḍra, peṇḍraha "grey-eyed, white-eyed", paṇḍra (f. pạṇḍri) "having light-coloured, greyish eyes" (Campbell: "having a white skin"), M. paṇḍrā "greyish buffalo", Ho paṇḍoi "white pumpkin", perhaps also S. porsa, phorsa "greyish, reddish-white" (but see s.v. phalgú- "reddish"), and poṭohaṅ "whitish, greyish, dirty-grey", palkui "fair, light-coloured (hair), pale (leaves)". Note that polso "dim, hazy" (cf. popolhot', etc.)

¹²¹⁾ Against Chatterji 405 (who compares $ph\tilde{a}p$ "swelling", $ph\tilde{o}pol$ "empty") and Turner 411 (Nep. phoko "blister, boil, ulcer, tumour" is rather related to S. buka "navel", see p. 155, n. 58).

¹²²⁾ Otherwise but quite improbable Thieme, ZDMG, 93 (1939) 136.

is also used in the sense of "whitish, not quite white". S. paṇḍu and paṇḍua (also paṇḍra?) are reborrowings from Hindi.

K. pulum and J. $p\bar{\imath}l\bar{e}$ "white" contain *pud- and * $p\bar{\imath}d$ - (cf. S. peṇḍra), unless $p\bar{\imath}l\bar{e}$ is an Aryan loan-word. The NIA. forms of the word for "yellow" (H. $p\bar{\imath}l\bar{a}$, etc.) are not clear (see Turner, s.v. $pah\bar{e}lo$), but the Skr. word $p\bar{\imath}ta$ - "yellow" (since Gṛh. S. and Upan.) resembles the Munda words so much that the question arises, if it may perhaps stand for * $p\bar{\imath}da$ - (with early decerebralization and unvoicing). The derivation of $p\bar{\imath}ta$ - is not known but there is at least one point which seems to indicate a foreign origin, viz. $pitt\hat{a}$ -, n. "the bile" (since Ath. S., VS., S'at. Br.), likewise of unknown origin. In view of Dutch gal "bile": geel "yellow", Engl. gall: yellow, Greek $\chi\delta\lambda o_S$: $\chi\lambda\omega\varrho\delta_S$, it may be connected with $p\bar{\imath}ta$ -, but then both $i:\bar{\imath}$ and t:tt suggest a foreign origin (which may be Proto-Munda).

Puṇḍra-, n. "mark on the forehead" (lex. puṇḍa-, m.) is probably a Dravidian word, cf. Tam. poṭṭu, Tel. Kann. boṭṭu "a round mark (red, white or black) worn on the forehead, dot, spot, mark", Tam. puḷḷi "mark, dot, speck, etc.", poṛi "spot, dot, point". If this supposition is correct, S. topoṇḍ "mark made by goad, esp. on buffaloes" (Campbell) must be a Dravidian loanword with secondary prefixation.

49. pelava- "tender, delicate (flowers, shoots, members)".

Since Suśr. and Kālidāsa. A non-Aryan word (but Telugu pēlavamu 'soft, weak, easy, sapless' is an Aryan loan-word). Unacceptable Uhlenbeck: pelava- from *palyava-. A suffix -va- is but rarely added to foreign words (in malvá- "foolish, silly" and similar instances we have probably to do with words originally ending in -u-, to which -a was added, hence *maḍu-a-: see for this word p. 104). On the other hand, a suffix pe-, variant of the well-known prefix pa- (par-, pan-), occurs in some Proto-Munda words, as pedaṇḍa- (see s.v. daṇḍá-); cf. bhe- beside ba- (see s.v. bakura-), and me- beside ma- (cf. mekhalā, see s.v. śṛṅkhalā). If however pelava- contains the same prefix pe-, the root word lava- may be compared with S. lewa "supple, pliant, flexible, soft", which is used of sticks, branches and of the human body, just as pelava-.

Other derivatives from la-wa are, e.g., S. lib lib "soft, mellow, saturated", M. Ho lebe "soft", S. labar lubur "soft, softened, pulpy", labur "soft, pliant, slack, supple, overripe", leber leber "soft, tender, thin", libir libir "soft, mellow, pulpy", lobhor "slack, soft", lubur "soft, boggy", libur "soft, tender", M. leber leber, libur libur "very soft and overripe", S. lib libur = lib lib, libra "slack, too pliant", lebrec' "soft, tender, slack", libas labes "soft, tender, ripe (fruit)", labas lubus "soft, fat, plump", and many other words as labak' lubuk', labit', loboe, lubui, lepe peje, lepes, lopot', lepet', lapotean, lapra.

50. phalgú - "reddish".

A word of the Yajur-Veda (TS., KS., VS.), cf. phálguna- "reddish, red" (TS., VS., = arjuna- in the other recension). Derivative: phālguna-, etc. Usually connected with visphulinga- (since S'at. Br.), sphulinga- (since Mhbh.) "spark of fire" (cf. visphulingaká-, RS.?), and with Lett. spulguot "to glitter, sparkle", Arm. phail (from *spheli-) "sparkle, lustre, splendour". See e.g. Johansson, IF. 2, 44, Brugmann, Grundriss I², 510, Wackernagel, Altind. Gramm. I, 218, Uhlenbeck, s.v., Fick I4, 149, Walde-Pokorny II, 679, etc. The meaning "reddish" is not, however, favourable to a connexion with words for "spark".

The Yajur-Veda has several Proto-Munda words with suffix -ga- or -gu-, e.g. khadgá-, m. "rhinoceros", phalgú- "minute, weak" (cf. also khadga- "sword"). S. podgoe "reddish, pale red, reddish-brown" suggests a similar explanation for our word phalgú-. The guttural is suffixal, cf. podeot" "pale (red)". Since podgoe must stand for *podgoe on account of porsa "reddish-white (fowls)", phorsa "greyish, reddish-white", the l of phalgú- represents the cerebral (as in phalgú- "minute", see p. 100).

This cerebral is still preserved in $p\bar{a}tala$ - "pale-red; m. pale-red colour, redness" (since Kauś., Kālid., Varāh. Bṛh. S.), also name of the tree Bignonia Suaveolens (since the epics). Lidén, Studien zur altind. und vergl. Sprachgesch. 90, compared Skr. $h\bar{a}taka$ - "gold" (which is connected with Old Church Slav. zlato, IE. * $\hat{g}holto$ -), and connected $p\bar{a}tala$ - with $p\bar{a}ndu$ -"pale, white" 123). This last word is however rather a Proto-Munda word (see s.v. pundarīka-): hence the original *pel-to- (assumed by Lidén) lacks any support. On the other hand, the sense of $p\bar{a}tala$ - suggests a connexion with $phalg\hat{u}$ -. As for pallavita- "reddened" (Vāsav., see Schmidt, Nachtr.) I do not hazard any opinion.

51. bákura-,

RS. 1, 117, 21 cd (to the Aśvin) runs as follows: abhí dásyum bákureṇā dhámantorú jyótiś cakrathur ắryāya "indem ihr ... mit dem Bakura den Dasyu anblieset, habt ihr weites Licht für den Arier bereitet" (Geldner). It is disputed which precise meaning the word conveys: according to the indigenous tradition "thunderbolt, lightning"; Roth prefers "a kind of war-trumpet" (on account of bākurá-), Geldner: "etwas, woraus ein Schlauch gefertigt wird". But bākurá- 9, 1, 8

tám īm hinvanty agrúvo dhámanti bākurám dŕtim

"Die unvermählten entsenden ihn; sie blasen den tönenden Schlauch" (Hillebrandt, Lieder des RV.), on which Geldner's explanation is based, need not be a vrddhi-derivative (see below). From the parallelism between

¹²³⁾ Similarly e.g. Walde-Pokorny II, 53.

1, 117, 21 and 9, 1, 8, it is evident that bákura- and bākurá- (dŕti-) must convey approximately the same sense, the proper meaning of both words being something like "resounding", while the first word is used as a substantive. As a matter of fact, the forms bekurā- ("voice, sound" according to Naigh., cf. bekurā nāmāsi, Pañcav. Br. 1, 3, 1) and bekúri- (nākṣatrāny apsaráso bekúrayo nāma, Taitt. S., Kāṭh. S., Lāṭy.. bhekúrayo Vāj. Saṁh., bhākurayo S'at. Br.) prove that ba-. b(h)ā-, b(h)e- are Proto-Munda prefixes 124).

Now we find in Santali bhakur bhakur "the call of a leopard" (which in Bodding's opinion is an onomatopoea). bhahkur bhahkur "do., about the sound of a tight string when strung, of a buah or bahla when played", hākur "to bray, growl (donkeys, leopards)", M. hukur "a low moan or growl, the cry of a buffalo". Although the vague character of such terms renders it impossible to furnish a conclusive proof it seems likely that the radical syllable kur- of bákura- etc., is identical with the root element of bhakur bhakur, etc.

Note also Pali bakkula- "a demon, uttering horrible cries, a form assumed by the Yakkha Ajakalāpaka, to terrify the Buddha". It has been explained as corresponding to Skr. $vy\bar{a}kula$ - or as an error for $p\bar{a}kula$ -. Its meaning leads us rather to derive it from *bar-kur-a- and to connect it with the above mentioned words. But as this word is only once attested (Udāna 5) no theory can be founded on it.

52. badiśa-, m.n. "hook, esp. fish-hook".

Attested since Mhbh., Rām. (e.g. 3, 51, 28; 68, 14), cf. S'āk. 114, 2 (ed. Pischel¹), Bhāratamañj. 1, 125, Bṛhatkathāmañj. 18, 153. In Suśruta and Vāgbhaṭa it denotes a hook-shaped surgical instrument. Instead of baḍiśa-(which is the oldest form, see Lüders, Philol. Indica 549) we also meet with the variants vaḍiśa- (see Pet. D.), biliśa- (Suparṇādhy. 17, 2 125), bāḍiśa- (Vikramāṅkad. 12, 63), valiśa- (Lex., cf. Tamil vaļicam, veļicam for paṭicam), lex. valiśī- (-i-), vaḍiśī-, variśī- (Hi. vaṛiśī!).

The vocalic interchange $a:\bar{a}:i$ suggests a Proto-Munda origin: Proto-Mundas and Dravidians were, indeed, the fishermen of ancient India. The modern Munda words (S. bāṛsi, M. bāṛsi, bansi), however, are clearly Aryan loanwords. Judging from such parallels as Pa. vanka- "crooked, a hook, a fish-hook", Tamil $t\bar{u}ntu$ "fish-hook" (: toti "curve, bend", $t\bar{o}tti$ "elephant hook or goad, hook, clasp") the original meaning of the word has probably been "crooked". Badisa- is accordingly to be separated

¹²⁴⁾ Frisk, Zur indoir, und griech. Nominalbildung 33, wrongly analyses bák-ura-.

¹²⁵⁾ In matsya iva biliśam jagrasāno, corresponding to Mhbh. 1, 24 6 Poona nigīrņam baḍiśam yathā (v.l. vidaśau). Cf. Charpentier, Die Suparṇasage, p. 243 f.

from san-diśa- "tongs" 126). Since the suffix -iśa- also occurs in other loanwords, as for instance in bāliśa- from bāla- "young, not full-grown, childish" 127), bad- may be derived from the Proto-Munda root bα-dα "crooked", cf. S. bhadea, bhade "with crooked foot, bandy-legged, bow-legged", bhadet' "knock-kneed, limping", paṭwet' "crooked, perverse, etc.", anṭet' paṇṭet' "crooked, winding", paṭea "crooked, disobliging" (e.g. paṭea thenga "a crooked stick"), paṭet' "to interlace, plait, put across", paṇṭet', peṇṭot' "miserly, stingy" (like paṭwet'), peṭta "perverse, crooked", peṭer "twisted, turned", piṭia paṭe "zig-zag, wriggling", piṭi "to coil up, curly", piṭua paṭwe "crooked, bent, zig-zag". See also s.v. meṇḍa-.

Note Skr. palāva- "fishing hook" (Vāsavad. 138, 3), perhaps from *paḍua? (cf. paṭwet', piṭua paṭwe).

53. bandá- "maimed, mutilated, crippled".

1. A word of the Vedic language (Ath. S., S'ānkh. S'S., Lāṭy., Āp. S'S.), especially used with reference to the hands (chinnahastakaḥ, hastādivarjitaḥ lex.); according to the commentaries it also means "impotent". Cf. ávaṇḍa-(ábaṇḍa-) "not tailless" (Eggeling, transl. of S'at. Br. 3, 3, 1, 16).

No satisfactory explanation has thus far been given. Johansson, KZ. 36, 371 (cf. Petersson, Studien zu Fortunatovs Regel 70) derived it from

¹²⁶⁾ Skr. saṇḍiśa-, m. "tongs" is only recorded by the Sabdakalpadruma and is generally regarded as a corruption of saṇḍaṁśa- (see Pet. Dict.). In view of Kui dīsa "tongs, pincers", however, we cannot reject a priori the possibility of a Proto-Munda word *sa-nḍiś- having existed alongside of saṇḍaṁśa- (which may have ousted it in the printed texts); Pa. saṇḍāsa- would then represent the variant das- (cf. Beng. saṇ̄āsi, Hi. saṇṣsī, whence S. saṇḍasi, saṇṣsi, saṇṣsi, M. sandsi "a blacksmith's pair of tongs, pincers"), and both may stand for diṭ-, daṭ-, cf. S. daṭo, daṭoṃ (M. daṛo) "claw of a crab, to pinch, grip", dạṭkop' "to pinch, nip", daṭop' "to seize with the toes", diṭom "the claws of a crab, to clutch, pinch, nip", ridet', ridop', ridkop', radop' "to pinch, nib" (root da-da). Only critical text-editions can decide the question whether or not saṇḍiśa-has really existed.

¹²⁷⁾ Bāla- "young, not full-grown, childish, ignorant", m. "child, boy, fool" (since Chand. Up., Śānkh. GS.) and bāliśa- (adj.), id. (since Nir., Mhbh.) do not look like inherited IE. words. Neither the connexion with Russ. balováť (Wackernagel, Altind. Gr. I, 182, Uhlenbeck), nor that with balbalā-kṛ- or with bála- "strength" (Walde-Pokorny II, 106, resp. 111) or with baskáya-, O. Ch. Sl. bolbnö (Scheftelowitz, ZII, 6, 113. KZ. 53, 250) carries conviction. Cf. S. bale "tender, fresh, young, infantile", M. bāle hon "infant, youth", bāle hopon "very small children", Ho bāle "early, young", perhaps So. rěbal "child, lad" (? cf. voc. rěba). Bodding compares S. bale to Semang bale' "young, fine, thin, slender, little, small" (Blagden's list, Y 40), which, indeed, bears a striking resemblance to it. Skr. bāla- (and Tam. vaļu "youth, that which is tender or young"?) may be derived from this word which is, on the other hand, to be separated from S. belen' belen' "tender, delicate, very soft", belkec', belken', belten' "tender, soft (about babes, some two three months old)". These words are connected with betkec' "weak, tender, young, inexperienced", betret', petret' "small with a big belly", bedrec' "stunted, small, insignificant", banda "young man" (Campb.), banda bandı "stumpy, short" (root $w\alpha$ -da. see further s.v. bandá-). Cf. also So. bólej' "tender, young".

*balnda- (root *beld- "to push, maim"), which was criticized by Persson, Beiträge zur idg. Wortforschung 266, n. 3. Scheftelowitz, KZ. 53, 251, proposes a similar explanation (*valnda- : Lat. vello). These theories disregard the fact that there is a class. Skr. word paṇḍa-, m. "eunuch", which Böhtlingk (Pet. D.), Wackernagel I, 116, and Uhlenbeck connect with baṇḍá-. Tedesco, JAOS. 65, 1945, 86 n. 30, separates both words and explains baṇḍá- as a Middle Indian variant of vṛddhá- "cut". It seems doubtful, however, whether paṇḍa- can be easily dismissed with. The IE. etymology proposed by Petersson (see op. c. 56), viz. connexion with Lat. pello, Old Engl. anfilt "anvil" (root *pel-d- "to beat"), is anything but plausible, as it is based on Fortunatov's obsolete theory. The relation paṇḍa- : baṇḍá- rather confirms Wackernagel's opinion (based on the sole phoneme b) that baṇḍá- is a foreign word (op. c. 184).

There are however more indications of a foreign origin. The following words point to an original meaning "defective": Skr. vanta- "tailless" (Gaut.), "unmarried, an unmarried man" (Hemac., Med.); cf. Pkt. vantha-"unmarried" (akrtavivāhah, Deśīn. 7, 83); Skr. lex. vantha- "crippled, maimed, unmarried" (Hemac., Med.), cf. Pa. vatta- "cripple" 128), avanta-"well-formed (breast of woman)" 129); Skr.dhp. vanthate "ekacaryāyām" (wrongly Gundert, ZDMG. 23, 522: Tam. ongu "one"), vathara- "mandaḥ, mūrkhaḥ" (lex.), vandhya- (Pa. vanjha-) "barren, sterile, fruitless, useless, wanting, destitute of" (abandhya- Kālid., avandhya- "not fruitless, successful"), and, on the other hand, Pa. bhandu- "bald-headed, close shaven", Pkt. bhandu- "tonsure, shaving", bhanda- "decapitated" (chinnamūrdhā Deśin. 6, 100 and 109 resp.). The same double semantic development from "short" to "bare, shaven" on the one hand, and to "stunted, blunt, defective, barren, etc." on the other, is also met with in derivatives from the roots $g\alpha$ - $d\alpha$ (see s.v. kuntha-), $d\alpha$ - $d\alpha$ (see s.vv. danda-, suntha-) and da-wa (see s.v. $t\bar{u}par\dot{a}$ -) 130). Cf. also Hi. $b\bar{a}d\bar{a}$ "maimed, crippled. docked, tailless", Skr. bhadrā-kṛ- "to shave", madrā-kṛ- "to shear", Mar. bhādarņē "to shave, shear", etc. (see further Tedesco, p. 90 f.).

The aspiration (in *bhaṇḍ-, bhadrā-*), and the nasalization (in *madrā-*, in addition to which many instances will be mentioned below) suggest a Proto-Munda origin, although they do not afford a conclusive proof: in Dravidian an initial v may also become m ¹³¹) and the change m > v also occurs. A further indication of foreign origin is the surd in *paṇḍaka*-(Kāṭh. S.), *páṇḍaga*- (Ath. S.) ¹³²), *paṇḍa-*, *paṇḍra-* (Sāh. D.),

¹²⁸⁾ Corrupt for vantha- according to the PTS. Dict.

¹²⁹⁾ Unlikely PTS. Dict. s.v. vanta- "stalk".

¹³⁰⁾ Vádhri- "emasculated, unmanly" (RS) is usually connected with $i\theta\varrho is$ routas $\varkappa\varrho i\delta\varsigma$ but the IE. character of the Greek word is not quite certain on account of the variants $\mathring{a}\vartheta\varrho is$, $\mathring{i}\vartheta\varrho is$ and $\mathring{o}\vartheta\varrho is$. Nevertheless $v\acute{a}dhri$ - is hardly connected with $band\acute{a}$ -, $badhur\acute{a}$ - (see below).

¹³¹) Ramaswami Aiyar, Educational Review, June 1930, p. 5 f. (off-print), Burrow, BSOAS. 11, 351 f.

¹³²⁾ For -ga- see Wackernagel I, 117 and Oldenberg ad RS. 1, 116, 1 (árbhaga-).

paṇḍraka- (Sāh. D., Mārk. Pur.); cf. pandruka- (miswritten as yandruka- in Kap. S.), paṇḍu- (lex.) "eunuch". Pali has paṇḍaka- "eunuch, weak-ling", and according to some authorities Pkt. peṇḍaa- (Deśīn. 6, 53) also means "eunuch". In addition to the bibliography quoted above it should be noted that Burrow recently connected paṇḍa- with the Dravidian word for "woman" (Tam. peṇ, peṇṭu, etc.), see Transactions Philol. Soc. 1945. 109. But "woman" and "eunuch" are different notions: as for Tam. pēṭi, pēṭu "hermaphrodite", Tel. pēḍi "eunuch, hermaphrodite", it is not quite certain that they are native Dravidian words as Tel. pēḍe "a beardless man" is in all probability a Munda loanword (see p. 104) 133).

In other words the d has been unvoiced and appears as t, c. This, together with the ablaut a:e:o/u, is a further indication of foreign origin. The vocalism points to Proto-Munda, rather than to Dravidian, Burrow, it is true, quotes some instances of a fluctuation between a, i and u in radical syllables of Dravidian words (Transactions 103, 108, etc.); it remains to be seen how many of them are native Dravidian words. The following are a few Aryan words derived from the same root as bandá-: Skr. būṭakarṇa- (Pañcat. Pūrṇabh. 134, 26: būṭa- "cut, rent, torn") 134), Si. buto "ear-cropt, without ears, wanting horns or tail, incomplete, short", Panj. būrā "having the ears cut off, having no ears", Guj. buttho "reduced to a stump, blunt", Hi. būcā "crop-eared" (cf. Nep. buco, bucco "deformed, mutilated, earless, noseless, tailless, tuskless, etc.", Beng. bocā "noseless", etc.), bhoṭā, bhoṭā, bhoṭhā, bhoṭhrā "blunt. dull", $b\tilde{u}t$ "sprig, stalk, stem; small, diminutive, stumpy", $b\tilde{o}t$, $b\tilde{o}t\bar{a}$ "stalk, stem, stump, finger", Beng. bôţā "foot-stalk of leaf or flower" (which Chatterji 356, 491 derives from *vonta- < vṛnta-); Hi. bhetū, bhetī "stalk, stem", perī "trunk of a tree, stubble", per "tree, plant, shrub". The meaning "stalk, stem" has developed from "stripped, leafless" (see s.v. dandá-). For further examples of bod- I refer to Tedesco, p. 86 and 96 f., from whose materials I only quote Pkt. boda- "mundita-mastakah" (Sheth), voda- "chinnakarṇaḥ" (Hāla), Mar. boḍṇē "to shave, fleece", bhūḍā "bare, naked, void, wanting the usual ornament or accompaniment, hornless". Cf. also Si. bhudo "toothless", Hi. būrā, borā, baurhā, baulā, id. and see in general Turner s.v. bhutte.

Munda has a large number of derivatives from wa-ḍa "short, blunt, stunted, bare, etc.", cf. S. baṇḍa "docked, with stumpy tail" (perhaps reborrowing from Hi. baṇḍa, baṇḍa, "with shortened tail, to cut off, etc." (M. baṇḍa, Ho. baṇḍa "tailless"), baḍhia "a castrated pig", (Ho baidā "castrated"), baorā "dwarf, dwarfish, of small stature", bora (M. borā),

¹³³⁾ Javanese wandu, "hermaphrodite", Madurese bandhu(h), Nias mandru "barren" are highly interesting but I must leave it to competent judges to elucidate their relations to paṇḍa- (if there are any). Lafeber's remarks (Klankleer van het Niassisch, p. 95 with n. 1) do not carry conviction (for the Indian explanation of the name Pāṇḍu- cf. Mhbh. 1, 100, 17 Poona ed.).

¹³⁴⁾ See Schmidt, Nachtr. (with lit.) and cf. Ved. śunṭhākárṇa-, id., from dα-dα (p. 149).

borga "blunt, to lose its edge", bhoṭko, bhoṭṛo "blunt, dull", boṛo "blunt, without teeth", buṭa "the foot or base of a tree, the stem below the branches, trunk" (Ho buṭā "the trunk of a tree, a stump"), buṭṛa "short, dwarfish", butuc' "short (of ears)", podea "small, insignificant, useless", je̞rweṇḍeṭ' "little wretch, greenhorn", je̞r beṇḍak' "small, insignificant", je̞re beḍḥe "stunted, crippled, small" (je̞r- < da-da), be̞dre̞c' "stunted, small, insignificant", pe̞dgo "dwarfish, short", buca "crop-eared, with neck partly broken off; to break off, cut off, crop". M. bucā "broken, defective" (cf. Beng. bōcā), etc. The meaning "bare" is found in S. baṇḍuc' baṇḍuc', bhanḍal bhuṇḍul "with scanty clothing, naked", bhuṇḍla (f. bhuṇḍli) "who has no girdle round the loins, unsightly, naked, improperly clad", poṭor poṭor "bare, denuded", poṭak' "to strip, peel off, rub off, break", laṇuc' baṇuc', laṇuc' paṭuc' "naked, shamelessly", etc. The last expressions are, like jerwendet' etc., combinations of da-da and wa-da (see also p. 80).

2. Among the derivatives from da-da "short, stripped, bare" we find, by the side of dendea, dendka "bare, scantily clothed" etc., also dendka "to be stripped, destitute, utterly poor", hale dale "destitute, forlorn, shelterless, to be in want", tonta "scarce, insufficient", landha phucia, larbarea "destitute, poor, indigent" (da-da + wa-da!). The same semantic development is found in derivatives from wa-da. Cf. beside Pkt. thalla-, dhella- "poor" (da-da) the rhyme-word phella-, id. (daridrah, Desin. 6, 85) from wa-da (cf. Mar. phel "empty pod"). Such parallel formations and rhyme-words derived from two different roots are a specific Munda phenomenon (see below). Cf. also Pa. pottha- (v.l. potha-) "poor, indigent" and S. badho "to lack, want, be too poorly".

A parallel to danda "pole, staff" (from da-da) is possibly Hi. $bal\bar{a}$ "beam, pole, boat-hook", cf. $ball\bar{\imath}$ "rafter, pole, prop. the pole or bamboo with which a boat is propelled", barer "beam, rafter" \sim Pkt. $bel\bar{\imath}$ "post, pillar" ($sth\bar{u}n\bar{a}$, Deś $\bar{\imath}$ n. 6, 95). The meaning "stalk, cane, reed" may further develop to "arrow", cf. S. dol "shaft of an arrow" (> Skr. $d\bar{u}la$ -?), Skr. $n\bar{a}r\bar{a}ca$ - (see p. 81), and $k\bar{a}nda$ -, m.n. "stalk, stem; cane, arrow" (p. 50). Hence Rigvedic bunda-, m. "arrow" may be an "Aryanized" form (like udumbara-, udumbala-, nada-, suveni-) of a Proto-Munda word *bunda (from wa-da). Tedesco, Language 22, 1946, 190, rightly connects it with munda-, but the derivation from vrdh- and the various sound-laws which it necessitates, are unacceptable. See further s.v. kamatha-.

Hi. chīlnā "to peel, pare, skin, excoriate", chāl "skin, rind, peel, bark" belong to a group of derivatives from da-da (p. 79); cf. K. sālī "husks, bark, peel" (~ Mar. sāl), Gondi caṭa, chilya "husks", Ladhadi sāl "husks", etc. In the same way we may derive the following words from wa-da: Skr. busa-. n. "chaff" (Kauś., Suśr.), buśa-, buṣa-, būṣa- (lex.), Pa. bhusa- "chaff of corn", Hi. bhus, bhūs, bhūsā, Mar. bhūs, Rom. phus, etc. (see Bloch 380). S. busa, bhusa "husk, chaff, bran, refuse" is a reborrowing from Hi. but cf. poṭak' "to strip, peel off, rub off, break", Ho

pora "to skin". Johansson's explanation of Pa. bhusa- (from bhraś-, KZ. 36, 356) is to be rejected. The aspiration in Pa. bhusa- (Geiger § 40) is sufficiently explained by the Proto-Munda origin 135), just as in the case of Pa. thusa-: Skr. túṣa-, m. "the husk or chaff of grain" (since Ath. S.), which is again a rhyme-word of busa-, derived from da-da. Like Guj. photrũ "chaff" 136) and Mar. phel "empty pod", Tam. poṭṭu and Kann. poṭṭu, hoṭṭu "chaff, husk" are prob. Munda loanwords.

A very common semantic development, which is found in derivatives from all Munda roots with the meaning "stunted, short", is: "small" > "child, boy" > "servant" (cf. Skr. kiśora-, ceṭa-, etc. from ḍa-ḍa). Thus we find in Santali: peḍgo "dwarfish, short" $\sim beṭkec'$ "weak, tender, young, inexperienced"; buṭra "short, dwarfish" $\sim butru$, butur "a child"; baṇḍa "young man" (Campb.), a rhyme-word of K. gaṇḍā, gandā "boy" (p. 50), just as buṭra is of S. guṭra, id. Many derivatives occur in Aryan, e.g.:

with initial b: Skr. batu-, m. "lad, fellow, boy, a young Brahman" (since Mhbh., see Pet. D. V, 1642) 137), $vot\bar{a}$ - ($pot\bar{a}$ -) "female servant" (<*girl), Halāy., Pkt. boda- "young man" (taruṇa ity anye, Deśīn. 6, 96), vodraha-(bodraha-) 138), voraccha-, id. (7, 80), valla-, m. "child" (śiśuḥ 7, 31), Nep. bhunu "very small, insignificant" (cf. Beng. tunī "little girl" from $d\alpha$ - $d\alpha$), bhure "small, young", bhuro "a small boy", burce "dwarfish, shortish, dwarf", burco "dwarf". — With a different vowel: Hi. betā "son, boy, child, a form of address used by fagīrs towards their celās or disciples", a Munda rhyme-word of *ceta; cf. Pkt. ceda-, cilla- "bālaḥ", Mar. ceḍā "son", Hi. celā "servant, slave, pupil, disciple" (Skr. ceta-, cetaka- "servant") and S. cenda, tenda "young": cetra "dwarfish". Hence Chatterji's suggestion (pp. 328, 491: *betta- < vetra, cf. vamsa-) is to be rejected. See Turner s.v. beto. With initial aspirate: Pkt. bheli- "female servant" (cețī, Deśīn. 6, 110); but bhuttūṇa- "servant" (bhṛtyaḥ 6, 106) is ambiguous (from a Proto-Munda echo-word *but-tun, cf. Beng. tunī?), cf. vantha- (akṛtavivāhaḥ ... khando ... bhṛtyaś ca 7, 83);

with p: Pkt. phiḍḍa-, m. "dwarf" (vāmanaḥ Deśīn. 6, 84), paṭoa-, m. "boy" (bālaḥ 6, 9), peṇḍaa-, m. "young man" (taruṇaḥ, ṣaṇḍhaḥ 6, 53), identical with peṇḍa-, n. "khaṇḍam" (6, 81); Nep. phuco "small. small boy", phuce "small boy", phuci "small girl" (: Ass. phusuṅ "worthless", cf. S. phuci "small. little", phuciạ "small-buttocked"). Skr. pota-, potaka-, m. "young of an animal or plant" is a comparatively young word ¹³⁹). Hence it is very doubtful that it represents an ancient IE. variant of putrá-, Av. puϑra-, as the manuals of IE. linguistics usually assume (e.g. Walde-

¹³⁵⁾ Cf. Pa. khujja- < Skr. kubja-.

¹³⁶⁾ See also Turner s.v. phosro.

Wackernagel I, 184 rightly assumes a foreign origin. Cf. S. batua "servant"? (Erroneous connexion with Old Church Slav. bolb by Scheftelowitz, KZ. 53, 250 f.).

¹³⁸⁾ For the Munda suffix -ha-, see kalaha-, ganotsāha-, ladaha-, mataha-.

¹³⁹⁾ It is still rare in Rām. (mṛgapotaka- 3, 61, 5 Bomb.), and Mhbh. (śālapota-). Schmidt, Nachtr., gives pota- "small child, babe" (Yaśastil.).

Pokorny II, 76, Specht, Der Ursprung der idg. Deklination 206, 220: Lett. putns "bird", etc.). Wackernagel, Sitz. ber. Preuss. Akad. 1918, 391 n., explains pota- as a Middle Indian form of putra-. It cannot, however, be separated from poṭaka-, m. "servant" (schol. on Kāty. S'S.), poṭā-, voṭā- "female servant" (Hemac., Halāy.), "hermaphrodite" (Harṣac.). Moreover, the meaning "young plant" points rather to a word with the general meaning "small". Now Hindi has, besides poā "a nursling of any animal, plant" and pot, which are derived (resp. borrowed) from the Skr. word 140), also poṭā "the young of an animal, an unfledged bird, young children", which is in my opinion a direct borrowing from Munda (cf. the parallel instance Skr. pūta-: Hi. pūṭh, puṭṭhā "buttock"). Pa. pillaka-"young of an animal" is ambiguous: either with Pkt. phiḍḍa- from wa-ḍa, or a Drav. loanword (Tam. piḷḷai, Kann. piḷḷe), unless the Drav. words are also of Proto-Munda origin (see p. 106):

with initial m: Hi. $mor\bar{a}$ "a shaveling, dial. a boy", Bılaspuri $mund\bar{u}$ "boy", etc. But $mad\bar{u}sik\bar{a}$ - "a dwarfish girl, unfit for marriage" ($\bar{A}p$. GS., vv. ll., mat-, mandt-, mandt-) is hardly connected.

In this connexion we may draw attention to an ancient word for "small", viz. phalgú-"minute, weak" (since $V\bar{a}j.~S.$), phalgvà-"small, weak" ($\bar{R}S.~4.~5.~14$), Pa. pheggu-"worthless, inferior wood". Neither the connexion with Greek $\varphi \epsilon \lambda \gamma \dot{v} \nu \epsilon t$ à dourete, $\lambda \eta \varrho \epsilon i$, nor that with sphūrj- (see Fick I+ 150) is acceptable. Moreover, the cases in which an initial aspirated surd can with certainty be traced back to prim. Indo-European are extremely rare. Like its homonym phalgú-"reddish", phalgú-"minute" stands for *phad-gu and is connected with S. pedgo "dwarfish, short", betkec' "weak, tender, young, inexperienced" (note the same guttural suffix; cf. also khad-gá-"rhinoceros").

Among the derivatives from da-da there are some which mean "solitary". It is doubtful, therefore, if Nep. phiţţe "separate, alone" should be derived from Pkt. phiţţai "falls, is broken" (Turner s.v.) and, accordingly, be separated from Nep. phuţţa "separate", phuţţo "alone, separate, apart", phuţkaro "separate, odd, extra". See below Skr. chamanḍa- "solitary person" and cf. the echo-word Nep. chutţto-puţţo "divided up, separated" (da-da + wa-da. see p. 81).

Skr. kavandha-, kabandha-, m.n., "headless trunk" occurs since the younger Vedic prose, see Renou, J. As. 1939, 390 f.; cf. adj. kāvandha-(S'iś.), Pa. kavandha- "the (headless) trunk of the body endowed with the power of motion; a headless dwarf, whose head has been crushed down into his body", Pkt. kamandha- (Pischel § 250) and Tam. kavantam "headless body, demon, stump of a tree". See Wackernagel II, 1, 84 and Charpentier, Monde Or. 18, 13 (Kirste, SB. Wien. Ak. 132, 1895, p. 32. compares kavandha- with Gr. Káarθos!). Renou holds this word to be identical with Ved. kábandha- "barrel, cask" ("belly" Ath. S.). I strongly

¹⁴⁰⁾ See Turner s.v. pothi.

doubt that we have to do with one and the same word, the meaning "trunk" being a further development of "belly"; the meaning "stump of a tree" in Tamil and its synonym runda-, which is a Proto-Munda word, point in a different direction and suggest an original sense "stunted". Kábandha- will accordingly contain the Proto-Munda prefix ka- and the "Aryanized" form of Pkt. bhanda- "decapitated".

3. Besides Skr. madrā-kṛ- and Hi. moṛā quoted above there are many more words with initial nasalization in Aryan. Thus Skr. maṭaha- "little, poor" (Yaśastil.), Pkt. maḍahaṁ "small" (laghu Deśīn. 6, 117) are apparently related to, e.g., Nep. phuco "small" and Pkt. phella- "poor" (pp. 99, 98; Pa. atimaṭāhaka- "short" is of doubtful spelling and meaning). The suffix -ha- is a certain indication of Proto-Munda origin.

Marathi has, beside $matg\bar{a}$ "too small" (cf. S. pedgo. Skr. phalgu-), also $m\bar{a}tkul\bar{a}$ "small", which seems to contain a suffix- $ul\bar{a}$ (Bloch 381 does not discuss either the guttural or $-ul\bar{a}$). On the other hand, Skr. lex. matkuna-, m. "a beardless man, an elephant without tusks, a small elephant" 141), $matkun\bar{a}-$ "pudendum sine pube" (see s.v. $kunth\bar{a}-$ "blunt, dull") look like being derivatives from kut-/kun- with prefix mat-. In reality, both will be combinations of mat- (root wa-da) and kun/kul- (root ga-da). Cf. Pkt. matta- "hornless" ($singavih\bar{\imath}nah$ Desin. 6, 112) 142) and Hi. $m\bar{a}r\bar{a}$, $m\bar{a}riy\bar{a}$ "weak, lean, thin, poor, worthless, trifling, mean, low" (a morphological parallel to $n\bar{a}r\bar{a}$ "stubble" from da-da).

¹⁴¹) See Turner s.v. *makunu*, id. (but *matkuṇa-* "bug" is a different word, see p. 41 f.) and Hobson-Jobson s.v. *muckna*.

¹⁴²) From Tam. *motṭṭai* "hornless" according to P.V. Ramanujaswami, Deśīnāmamālā Introd. 8 and Glossary. But see p. 103 f.

¹⁴³⁾ S. boṇḍo "foolish, stupid" is again a rhyme-word of M Ho doṇḍo "fool, foolish, stupid, ignorant" (cf. bhoṇḍo "blunt", Campb.). In S. loro boto, id. derivatives from both roots are combined. Cf. also Hi. thos "dense, dull, obtuse" which bears the same relation to Hi. thot "dense. obtuse, stupid" as, e.g., Nep. thoso "stalk remaining in the ground, stubble" does to Nep. thuto "stump" (Hi. thosā and Lhd. thutth are prob. "penis-words", like those which Tedesco discusses in his paper). With initial assibilation: Skr. lex. śoṭha- "alasaḥ, mūrkhaḥ, dhūrṭaḥ, nīcaḥ" and possibly jaḍa- "apathetic, stupid, idiotic", if orig. different from jaḍa- "cold, cool" (?).

¹⁴⁴⁾ Many words for "foolish" derived from wa-da are recorded by Turner s.v. bhutte "blunt". Only a few examples are here quoted.

Pkt. mattha- and marāla- mean "lazy" (alasaḥ, Deśīn. 6, 112). As for mattha-, the editor of the Deśīn., Paravastu Venkata Ramanujaswami, does not decide between derivation from Skr. mrsta- (thus Turner s.v. mātho "slow") or Drav. maddi (= Tel. Kann. maddi "stupid, dull, awkward person", see K. Amrita Row, Ind. Ant. 46, 35). But Kshm. moțh" "dull", Ass. māțh "blunt, slow", Panj. mațțhā "blunt", Si. mațho "dull, weak" leave no doubt as to their Munda origin; cf. especially Or. mathuā: S. mathua, matho "dull, lazy", mandhua "impotent, dull", masua "indolent, lazy, impotent". For Skr. lex. vathara- Ujjvaladatta gives the meaning "mūrkhaḥ" whereas Trikāndaśesa and Hemac. render "śathaḥ"; besides Trik. provides the meaning mandah "lazy". Is manda- itself connected with bandá-? Fick and Uhlenbeck compared OChSl. moditi "cunctari", modene "tardus" but the nasalization of these words is secondary, the variant muditi representing the original form of the word (Vondrák, Slavische Grammatik I, 153, van Wijk, Geschichte der altkirchenslavischen Sprache I, 142 and cf. Miklosich, Etym. Wörterb. der slav. Sprachen 1886, p. 206). The connexion with manda-, still upheld in Walde-Pokorny II, 305 f., is accordingly to be abandoned. It should be added that the meaning of manda- is "dull, inert, weak, small, little, slow, lazy, tardy, stupid" (since Mhbh. Rām.), and that there exists a variant manthara-, id., which is either separated from manda- (Walde-Pokorny, l.c.) or connected with it on the assumption of a root men- (cf. Uhlenbeck s.v., Kuiper, Die indogerm. Nasalpräsentia 141, n. 6). Since manda- and manthara- have no clear cognates in Indo-European, the connexion with bandá-, which allows us to account both for their form and their meaning, offers the most satisfactory solution 145). The decerebralization may reflect a dialectal development of Munda. Different is the case of badhirá- "deaf" (since the RS.). This word, too, is without IE. cognates (see Walde-Pokorny II, 190). Since the general meaning "defective" (Turner s.v. bhutte "blunt"!) can apply to all sorts of defects (cf. kaḍá-, kala- "dumb", kanva- "deaf", kāná- "one-eyed" from gα-da), badhirá- may be a derivative from wa-da, with substitution of the dental for the cerebral as in many Rigvedic words. This explanation, merely hypothetical in itself, finds some support in the occurrence of Hi. bahila, Nep. bailo "barren, sterile (esp. of cattle)" by the side of Hi. bahirā, Nep. bairo "deaf, inattentive". This variant suggests that badhirá- originally had a wider sense (which was preserved in the dialect from which *badhila- originates). Cf. also Kann. hoțta "a deaf man": hoțtu, poțtu "chaff, husk" (= Skr. busa-, see above).

4. The most difficult word-group is no doubt Skr. muṇḍa- "shaved, bald, hornless, lopped (tree), pointless; bald-head" (since Mhbh., Rām., Yājñav., Var. BS.), muṇḍin- "shaven-headed" (Mhbh., Hariv.), muṇḍaka-,

¹⁴⁵⁾ Additional data, which confirm this explanation, are the diphthong in Mar. maid (a Munda phenomenon), the meaning of Sgh. manda "small" and Nep. matthar "dim, dull, dark" (rhyme-word of Hi. latthar "slow, lazy").

m. "trunk or stem of a tree" (Vyāsa), mundayati "shaves" (Pān. etc.). The fundamental problem, already apparent in the case of Pkt. mattha-(see n. 142), is: how is the existence of two parallel word-families in Dravidian and Munda to be accounted for? Munda- is usually derived from IE. *mel-d-, cf. Gr. $d\mu\alpha\lambda\delta\dot{v}r\omega$ (thus Fortunatov and Bühler, see Wackernagel I, 167, Uhlenbeck, Petersson, Studien zu Fortunatovs Regel 5, 54), which was only slightly modified by Lidén, Studien zur altind, und vergl. Sprachgeschichte 88 f: mel- "to cut", cf. Russ. molit' (but cf. Wüst, Indisch 94, Walde-Pokorny II, 87: munda- lit. "attritus", from mel- "to rub"). Recently, however, two different theories have been forwarded. Thieme, ZDMG. 93 (1939) 135, derives munda- from *mrmsta- (on the supposition of a very doubtful phonetic law) and connects it with pandita-, whereas Tedesco, JAOS. 65, 1945, 82-98, devotes a very detailed study to this word and its cognates, which he derives from Skr. vrddha- "cut". Przyluski, on the other hand, connected munda- with S. mundla, etc., Pkt. bhandu- and other words with initial b (some of them being of doubtful connexion with this word-family, e.g. Malay butak), see BSL. 30 (1930) 199. In a previous paper of his, Tedesco had rejected this explanation as far as munda- is concerned and declared the Santali correspondents to be loans (Language 19, 1943, 16, n. 71). In his later study he accordingly ignores the problem of the Munda words (see p. 83, n. 15). Still, the chief difficulty lies, not in the supposed phonetic developments of Arvan, but in the relation between Munda and Dravidian.

Apart from such apparent loanwords as Tam. muntam "bald head, skull, headless trunk, naked person", Tel. mundamu "the head cut off from the neck, a shaven pate, a bald head, the trunk of a lopped tree". mundudu "monk", etc., we find e.g.:

with vowel o: Tam. mottai "bald head, shaven head, bluntness, as of a knife, stupidity, dullness, complete barrenness, unmarried young man" (cf. above Skr. vantha-), mott-ampu "blunt arrow", mottai-maram "barren, unyielding tree, tree completely stripped of its fruits, leaves, etc.", monnan "bald-headed person", monnai "baldness, bluntness", monnaiyan "dullard, idiot", mottu, id., molai "hornless or dehorned cattle, anything defective, stump, block, stupidity", mōlaimai, mōtu "stupidity", mōtan "fool, blockhead", mūļi "defect of limb, deformity", etc.; Tel. mondi "stubborn, obstinate, maimed, defective, imperfect, bare, lopped", mondu "stubborn, obstinate, maimed, crippled", mondemu "a stump, trunk of a body after the head is lopped off, a separate member" (cf. Skr. kábandha-), mōṭa "dull, stupid, simple", mōţu, "id., a stump, block, trunk", mōḍu "a stump of a tree", moddu "blunt, not sharp, dull, stupid, stubborn, a block, stump, mass, blockhead"; Kann. motu "the state of being short, stumpy, maimed; stump of a tree, stubble", moddu "bluntness, stupidity"; etc. There are some variants with initial n. e.g. Tam. nontu- "to be lame, limp, hobble", nonti "a lame person or creature" (: monți "lame"). Burrow, BSOAS. 11, 333, 609, holds that before o and u an initial n could become m in Dravidian. This may perhaps be correct in the case of some of the other instances (although it is often rather difficult to decide which sound is the original one) but the circumstance that n- is here only found in words with following -nd- suggests that, in this case at least, we have rather to do with delabialization. Moreover many variants with initial labial occur, e.g. Tam. pōṭu "baldness, shaven condition", poṭṭal "baldness, barren tract, waste land", Kann. bōlu "bald, the state of being shaved, a bare, leafless, treeless state", bōle "the state of being without hair", bōli "a head-shaven woman, a widow", bōḍu "toothless state", bōḍi "a toothless woman, one who is bare, or destitute of hairs, or of horns", boṭṭa "stump" (from Mar.?), Tel. bōḍa, bōḍi "bald, bare, hornless, cropt, tuskless" (cf. poṭṭi "short, small in size", Tam. poṭuku "smallness", poṭi "anything small"?), Kui buṭuli "short, of a small stature", būndi "cut short, cropped", etc.;

with vowel a: Tam. mali- "to shave (the head)", malu "blunt, bald, bare", maluku- "to become blunt", mați- "to be turned, as an edge or a point", mațivu- "to blunt", maṇtu "fool", maṇṇai "bluntness, ignorant, stupid person", maṇai "blunt instrument, bluntness", maṇaiyan "dull person, blunt weapon", etc.; Tel. maṭṭamu "small, scanty", maḍḍi "foul, dull, stupid, akward", madaṭa "a stupid rustic", etc.; Kann. maḍḍi "stupid, dull, awkward person", maṭa "stupidity, ignorance", maṭṭa "shortness, smallness". Cf. Skr. malvá- (< *maḍu-a, cf. S. maṭho, maṭhua, "dull, lazy", maṣua "indolent, lazy, impotent") 146) and māṣa- "foolish". With initial p/b: Kann. baṭā, baṭṭa "barrenness, voidness", Tel. baḍi "slight, petty", baḍugu "poor, lean", paḍucu "young", paṭṭi "child", Tam. paṛuki "shortness, stuntedness".

It would serve no purpose to add more examples. It may however be noted that also words with *i*, e occur, e.g. Tel. pēḍi "a hermaphrodite, impotent man", pēḍevāḍu "a smock-faced beardless man, a hermaphrodite", pēda "poor, indigent, slender, lean, thin, scanty", picca "madness, folly", piccagāvuṇḍē "foolish, mad, short, deficient in measure or weight", picci "mad, foolish, silly, fruitless, vain", piccuguṇṭu "a cripple, a lame man", bīḍu "waste, base, low, barren land", pīda "poor, scanty, lean, small", pīla "poor, scanty, short, lean", bēla "simple, ignorant", Kann. pelava "lame man, cripple", bicce "a barren woman", picu "shortness, smallness", picce "shortness, deficiency in measure or weight" (: puṭṭa "smallness, littleness, etc."), etc.

In Santali we find, beside the words with initial w, b. p quoted above, e.g. medoran, mendorean, mendorean "beardless, to shave away the beard", maera "clean-shaven", moedon, moidon, mon'don "bare, bald", marca "bare, physically poor, deteriorated, puny" (from *mar-aca, cf. dial.

Otherwise Scheftelowitz, KZ. 53, 267 (Av. mruta-, Gr. $d\mu\beta\lambda\dot{v}_5$) with bibl.

narca, id. = Skr. nārāca-, see p. 81); mandhua "impotent, dull" 147), masua "indolent, lazy, impotent", which point to a word *madu, represented by matho, mathua "dull, lazy", and mirū "brimless, rimless (of vessels having no outstanding lip)"; murchau "to cut off, cut round and off the top or end, to dress end by paring" (M. murchao "to cut off"), So. múttāsī- "stump of a hand", etc. Note the parallelism between muṇḍḥạ "blunt", mundga, mundguc', mundgut' (mondgoc', morgoc', murguc', mondgot', morgot', murqut'), mundla, mundra, mundruc', etc. "close-clipped, polled. branchless, hornless, bare (tree), to cut short, to bare, etc." and dunda, dundga, dundguc', dundla, dundra, id. (from da-da). Other instances of this morphological parallelism, which is a characteristic feature of Munda, have been pointed out above. — A prefixed derivative is, it seems, S. tamuti "to cut off the top of paddy (or other crops) before the general harvest, to eat a little before do.", cf. M. tāmuti "untrained, inexperienced" (lit. blunt?). But the same "prefix" is possibly contained in Skr. lex. chamanda-, m. "fatherless child, a man who is alone in the world, without relatives", chemanda- "fatherless child" and in Skr. lex. samūru- (Amara), samūra- (Hemac.), camūru- (both) "deer". The first word may be compared to Skr. lex. vantha- "unmarried", vanthate "ekacaryāyām, to go alone". Si. vāndho "a bachelor or widower without family". Particularly interesting is Hi. murhā "orphan", since Proto-Munda words for "orphan" are often derived from roots with the meaning "stripped, bare", cf. S. tuar Nep. tuhuro, id. (see p. 75). As for camūru-, etc., we may compare Pkt. muṇḍā- "a female deer" (mṛgī, Deśīn. 6, 133), Nep. muruli "female deer, doe" (: murulo "hornless, hairless, bald"), and further Skr. ruru-, Greek μεμάς "hind" ~ Skr. śáma- "hornless" 148) (which are, no doubt. likewise connected with Dutch hamel "castrated ram", Old Engl. homol "maimed", homelian "to mutilate", Old Frisian hemma, id., Goth. hamfs "maimed"). In view of these words tamuti must possibly be explained as a blending of da-wa (> tam-) and wa-da (> -mut).

The striking parallelism of the Dravidian and Munda word-families cannot reasonably be assigned to a mere chance coincidence. If Burrow's assumption of a Dravidian ablaut a:i:u is correct, the vocalism does not allow us to decide the origin of these words. As for the nasalization, it is, I think, strongly suggestive of Proto-Munda origin but since there are instances of initial v having become m in Dravidian, the Dravidian words could be accounted for by assuming a double development, viz. v > m, and v > b (> p); even the prefixation found in some Munda words affords no conclusive proof as the word-group must have passed from one of the two families of speech into the other at a very early date. Still the various facts suggest a derivation from Proto-Munda wa-da, the most important indication being the far-going parallelism which exists between the

¹⁴⁷⁾ Rhyme-word of landhua "lazy, sluggish, indolent" from da-da.

¹⁴⁸⁾ See Lüders, Philologia Indica 591 ff.

derivatives from da-da and wa-da. Since there is some reason to suppose that such parallel roots as ga-da, da-da, wa-da are ultimately prefixed formations which contain the same word-kernel -da 149), and since cognates of da-da seem to exist in Mon-Khmer (see s.v. suntha-; cf. also Semang $b\bar{e}lut$, Pangan Ulu Aring $m\bar{e}l\bar{u}d$, Bahnar $l\bar{o}t$ "blunt" 150), we must conclude that wa-da is also a native Austro-Asiatic root 151).

This conclusion is obviously of fundamental interest. The possibility that the South Dravidian languages contain Proto-Munda words has not seriously been considered hitherto: Ramaswami Aiyar mentions only one instance of a possible "Austric" word adopted by South Dravidian (Tam. tavakkai, etc. "frog", see Ojhā-Volume, p. 16, n. 1) 152). If however our conclusion is correct (and many similar cases discussed in this book tend to show that it is so), we must reckon with the possibility that even such seemingly native words as Tam. pillai, Tel. pille, Kann. pille, etc. "small, petty, child, young of an animal" are ultimately of foreign origin. It further corroborates the conclusion drawn from the occurrence of non-Aryan proper names in the Rigveda, that the Proto-Munda population must in former times have occupied an important and powerful position (see Acta Or. 17, 309). I am convinced, indeed, that a considerable part of the South Dravidian vocabulary is of Proto-Munda origin, just as is the case with Middle Indian and the modern Aryan vernaculars. It should be borne in mind that, since the earliest works of the Tamil literature are now generally assigned to the first centuries of our era, the testimony of these texts is worthless in this respect: some two thousands years (or more) of prehistoric intercourse between Proto-Dravidians and Proto-Mundas must have elapsed before the beginnings of the Sangam literature. On the other hand, some Dravidian words have, no doubt, been borrowed by the Munda languages. This influence has been particularly strong in the Southern dialects (Sora) and in the mixed dialect Nahali. Kurku, too, has a number of Dravidian words which do not occur in Kherwari. In these cases we have apparently to do with comparatively recent borrowings of each of the separate Munda dialects. It remains to be seen, if there is also a common stratum of Dravidian loanwords dating back to an earlier period.

5. For the NIA. equivalents I may refer to Turner s.v. muro, and to Tedesco's paper. They show many interesting meanings which are un-

¹⁴⁹⁾ See "Munda and Indonesian" (cf. p. 40, n. 44).

¹⁵⁰⁾ Similarly Mon kut, sakut "to cut", kun "dwarf" may be connected with Proto-Munda $g\alpha$ - $d\alpha$.

¹⁵¹⁾ The following Mon words may possibly be connected with wn-da samot "to be small, young, a little one, a babe, a child" (samot "ant" is a different word, cf. Malay semut, S. muc', So. muida-), wut "young woman, virgin", lemēn "crippled, a cripple". See further s.v. kamatha-.

¹⁵²) Burrow, BSOAS. 11, 597, admits the possibility of a very early Proto-Munda influence dating back to the period before Proto-Dravidian split up into the various languages.

known in Sanskrit and confirm our explanation, e.g. Hi. muṇḍā "shaven, not pointed", murlā "toothless", murhā "orphan", and muthrā "blunt, dull, silly, foolish" (: Nep. matthar "slow, dim, dull"). The last word alone is sufficient to show the inadequacy of Tedesco's theory. Skr. bhāṇḍila-"barber" (S'KDr.) is prob. a rhyme-word of Skr. caṇḍila-, id. (see p. 78).

54. b u d b u d a -, m. "a bubble (in water, or in general)".

This word occurs in the epics and the class. literature; it also denotes an embryo of five days (Nir. 14. 6, etc.). Most authorities consider it an onomatopoea, see Pet. Dict., Wackernagel I, 182, Uhlenbeck (but see Persson, Beiträge zur idg. Wortforschung 352 f.); it is then compared with similar formations as Greek $\beta o \mu \beta v \lambda i \varsigma$, $\pi o \mu \phi \delta v \varsigma$, Latin bulla, Lith. burbulas, bumbulas, Pol. babel, Czech. boubel, bublina, Dan. boble, Engl. bubble, etc. See Walde-Pokorny II, 114 ff. and, for the Baltic and Slavonic words, Trautmann, Balt. Slav. Wörterbuch 39.

An analysis of the Indian data, however, points to the conclusion that budbuda- stands for *budbuda-, cf. Pa. bubbula-, bubbulaka-, bubbula-, poṭa-, poṭa-, Pkt. bulambulā (Deśīn. 6, 95), Hi. burburā, bulbulā, balūlā, bullā, "a bubble", Tel. budḍa "a bubble, the disease called rupture 153), Kann. buḍa "a sound in imitation of that produced by a vessel, etc., when immersed into water". The Pkt. form is particularly interesting as it seems to represent a Proto-Munda formation *buḍa buḍa. But Skr. buḍabuḍa-, an "onomatopoeic" word, of a vessel sinking down in water (Hem. Par. 12, 91) may belong to buḍ- "to sink down".

Cf. S. baḍac' buḍuc', barac' buruc', biḍic' biḍic', buḍuc' buḍuc' "bubbling here and there, to bubble", bur buḍuc', bur buḍruc' "bubblingly, to bubble", beḍec' beḍec', id., poḍo poḍo "with a bubbling sound, to make do.", poḍrok' "to make a bubbling sound", ludu budu "bubblingly (the sound of millet being boiled)", M. baḍa buḍu "to bubble, whisper", etc.

Skr. barbura-, n., bubura-, m. (Naigh. 1, 12) "water" are possibly derived from a root bad-/bud-, cf. lex. bādara-, n. id., Hem. (the connexion with Greek $\beta \delta \varrho \beta o \varrho o \varsigma$ "mud, mire" should no doubt be given up). Like So. \check{e} -bu-bū- "foam", however, they are probably unrelated to budbuda-.

55. bhṛmalá-.

The word *bhṛmalá*- occurs only once in a hymn to the Earth of the Atharva-Veda (12, 1, 46):

yás te sarpó vŕścikas tṛṣṭádaṁśmā hemantájabdho bhṛmaló gúhā śáye, etc.

¹⁵³⁾ Tel. budda is a contamination of two different words, the second being identical with Kann. budde, Tam. puttā "swollen testicle" (see further s.v. picchā-). Tel. budda "bubble", however, has no equivalent in Tamil and is likely to be a more recent Munda loanword.

The Paippalada text has bhramalo (for parallel instances with ra for r, see Vedic Variants, II, 305 f.). The commentary of Sayana is wanting for this passage. Roth (Pet. Dict.) derived it, together with bhrmá- "Verirrung", from the root bhram- and conjectured a meaning "stunted, torpid" from the context. This translation has been accepted by most scholars, as Bloomfield, Henry, and Whitney. The last renders the verse as follows: "What stinging harsh-biting serpent of thine lies in secret, winter-harmed, torpid (?) ... (let that, crawling, not crawl upon us)". But the supposed relationship to bhrmá- (accepted by Wackernagel I, 71) is fallacious as the real sense of the last word seems rather to be "der rasch sich Tummelnde" (Oldenberg, Noten, ad 7, 1, 22).. A similar meaning has been assumed for bhṛmalá- by Ludwig, viz. "der rasch sich hin und her Schlagelnde" but this interpretation, which is merely based on a problematical etymology, is hardly correct. Tarapada Chowdhury, it is true, identifies bhṛmalá- with bhramara- on account of the variant reading bhramala- of the Paippalada text and Keśava's commentary on the Kauśika Sūtra, which renders it bhramarah. He accordingly translates the Ath. Vedic verse as follows: "The serpent, the scorpion, the harsh-biting (mosquito), the bee of thee, that, pressed by winter lie in concealment; whatever worm, being lively, O earth, stirs up in the early rainy season, let that crawling not crawl on to us, favour us with that which is propitious". See IBORS, 17 (1931). p. 87 f.

Keśava's interpretation, which is based on the assumption of an asyndeton (sarpá-, vṛścika-, tṛṣṭádaṁśman-, and bhṛmalá- denoting in his opinion different animals) is open to doubt. Moreover, as the passage refers to crawling animals (cf. tán naḥ sárpan mópasṛpad), bees are not the animals which one would expect to be meant here. On the other hand, the vacillation between bhṛ- and bhra- (if any weight is to be laid on this variant reading at all) is found in several words of Proto-Munda origin, as in bhṛkuṭi- and bhrakuṭi-, bhṛkuṁśa- and bhrakuṁśa-, see Acta Orientalia 16, 295 ff. The morphological aspect of bhṛmalá- suggests a similar origin for this word, in which case bhṛ- may be regarded as a prefix, whereas -mala- then must be connected with S. dholo molo "dull, unwell, out of sorts", M. dholo molo "drowsy", and the other words quoted s.v. kaśmala-. This explanation leads us to assign to bhṛmalá- nearly the same sense as Roth assumed, viz. "drowsy, stunned".

The morphological analysis of Proto-Munda words leaves however so much room for different interpretations as to make an attempt to explain Sanskrit words of unknown meaning a hazardous enterprise. There is however one fact which justifies the foregoing attempt at an explanation of *bhṛmalā-*, and which seems to confirm Roth's suggestion as to its meaning, viz. Nepali *bhimal* "unconscious, fainting, fit", which is evidently the same word. Its occurrence in Nepali proves that *bhṛmalā-* belongs to those Atharva-Vedic words of a more popular character which the Vedic language has in common with the modern vernaculars (see Turner, Nep.

Dict., Pref. p. VII and Introduction, p. XV). Tarapada Chowdhury's interpretation is accordingly to be rejected. As a matter of fact, whoever reads the passage with an unprejudiced mind will, I think, accept the common view as being most natural, viz. that tṛṣṭádaṁśmā, hemantájabdho and bhṛmaló are epithets of the sarpó vṛścikaḥ. From the fact (referred to by Tarapada Chowdhury, p. 88) that tṛṣṛadaṁśin- occurs elsewhere as an epithet of maśáka-, the mosquito, it does not follow that tṛṣṭádaṁśmā here denotes the same insect (as Keśava took it to be). We may rather conclude that here too it is merely an epithet.

56. mukura-, m. "a mirror".

Only in the class. language. Lexicographical works quote also makura-, mankura-, karkara-, karphara-, and karka-. The last word may be an inferential form, deduced from karkara-, cf. dundu- "drum", inferred from dundubhi-, khikhi- "fox" from *khikhira- (see khinkira-), etc. As for karphara-, it is no doubt a misreading for karkara- owing to the close resemblance of the akṣaras pha and ka. Cf. further Pkt. maura- (from *makura-, Pischel § 123).

Unlike mukula- "bud" (which is a derivative from the Dravidian root mug-, muk-), mukura- has no similarities in Dravidian. On the other hand, the vowel-variation in mukura-: makura- and the synonym karkara-, which points to a root kar-, kur-, are indications of Proto-Munda origin. The meaning of the root kur- must then have been "to see", cf. Skr. ādarśa-, Greek zátoπτρον, Latin speculum, Russian zérkalo (: sozercát' "to contemplate"), Engl. looking-glass, etc.

The root kar- is found in S. kare dhare, kare dhere "staring, fixedly (look)". Hence, in arit' kurit' "to look round, stare about, gape, glance rapidly around", the second word is no mere jingle of arit' (which is connected with ari bandhi "to look carefully, watch, scrutinize", arak' orok' "gaping, staring", M. ārid' "to gaze, look at", N. arā "to see") but is a derivative of the same root kar-, kur-.

A late word, only recorded (with many variants) in lex. works. Besides meṇḍha- (Halāy.) we find meṇḍhaka- (Hemac.), meṇḍa- (Rājanigh.), meṇḍhra-, and forms without nasal: meḍhra- (Amara), meḍhraka- (Trik.), meṭha- (S'abdārthakalpataru), cf. Hi. meṭhā; Pa. meṇḍa-, Pkt. meḍḍha-, meṇḍha-, meṇḍha-, meṇḍa-, fem. also meṃṭhī-. An etymological connexion between meṇḍha- and its synonym bheḍa- (Hemac.), bheḍra- (Trik.) 154) has been suggested by Bagchi, Pre-Aryan and Pre-Dravidian in India, Introd. p. XXVI (1929) and Przyluski, BSL. 30 (1930), 200. The latter quotes some examples of this Munda nasalization. Tedesco,

¹⁵⁴⁾ The adj. bhaindaka- (Rājanigh.) presupposes a variant *bhenda-.

Language 19 (1943), 15 f. however rejects the idea of a Munda origin and explains bheda- as a younger Aryan development from *mheda-. Since however the internal nasalization and the variation dh:d:th strongly suggest a foreign origin, the alternation bh-:m must be taken as an indication of (Proto-)Munda origin. Any doubt as to this origin is removed by a variant which has been left out of consideration in the previous discussions of menda-, viz. Hi. $mejhuk\bar{a}$ "ram", which shows the common Munda development of dh > jh 155).

Besides Hi. mēḍhā, mēṛhā, meṛhā, etc. "ram", Platts gives mēḍā "a he-goat with curling horns", miḍī "a she-goat with do.". This recalls Pa. meṇḍ- "koṭille" (to be crooked), which must be a loanword from Proto-Munda, cf. M. meṇḍā "curved and pointed towards the head (said of horns of animals)", merhāo "to twist, wind", Ho mendā (dirin) "(horns) bent down" (see JBORS. 2, 354), S. meṛha, mēṭha "twisted backwards (horns of a buffalo), having horns twisted backwards (buffaloes)", meṛhao, meṭhao, moṛhao "to wind round, wrap round, roll up, entwine itself", merao "to twist the strands of a rope", meṛgo "having horns twisted backwards (buffalo)".

A Proto-Munda root wa-da "to wind thread, to turn round, to wind into a bundle" must be assumed on account of S. burhu "a bundle of rope or string wound into a bundle, to wind do.", bor (M. bor) "a rope of straw, to make do.", bhertan "to turn round", bherwan "to turn round, wheel round, spin round" (lengthened form from *bheru, *bhedu), perta "crooked, to pervert, twist, warp", peter "to twist, turn, writhe, wind, screw", phentoc', potoc' "dislocated, twisted out of position", phente phere "to writhe and twist", piuri "a roll of carded cotton, to twist thread into a point, to roll up", M. pentor "to twist, twist and break", piuri "rolls of cotton to be spun into thread", Ho pere "to twist the tail". These words remind us of Hi. phirnā "to turn" (of doubtful derivation, see Bloch 373 and Additions p. XII, Turner s.v. phirnu), Guj. pharvū "to turn, return" (Turner s.v. pharkanu). Their meaning is however somewhat different from that of the Munda words. Other Munda derivatives from this root are S. bidwa, bidhua "cross-grained, crooked, twisted", badhoria, bedhor, bedhori(a) "crooked, cross-grained, perverse (wood, persons)", bedha bidhi "cross-grained, crooked, twisted, entwined" etc. (see s.v. badiśa-). With these Munda words are probably connected Central Sakai wēt, uēt "to twist", Bahnar uīn "crooked, to bend" Mon wēn "bent", kawen "to curl", bon "to twist, to braid", etc. (cf. venī-, p. 32). The rootform wa-na also occurs in Munda, cf. Bh. uin "to twist" (JBORS. 2, 463), S. un' "to twine, twist, plait, curl up" (where the final n has regularly been palatalized by the preceding i, and the diphthong ui has

¹⁵⁵⁾ Like *mejhukā*, the other variants must have been borrowed at various dates from different Proto-Munda dialects. No conclusion can therefore be drawn from the distribution of the variants in the NIA. languages.

been contracted into a single vowel according to the general rule that diphthongs do not stand in a closed syllable, see Bodding, Materials for a Santali Grammar I § 109), Ho $\tilde{u}i$ "to twist (into rope)", Kh. $u\dot{n}$ "to twist". A prenasalized variant $wa-\eta da$ occurs in S. $bh\bar{u}\eta\dot{d}$ "a large bundle or burden (tied)" (: M. $bir\bar{a}$ "a bundle of crop", Ho $bir\bar{a}$ "a big bundle of paddy"), whereas ma-da is represented by S. korea motea "to wrap up, roll up, make up into a bundle" (: potom "a wrapper, cover, to wrap up, cover, envelop").

A great many loanwords in Aryan are derivatives from this root, e.g. Ved. mandacara- "snare, noose" (lāngalapāśa-, see Caland, Über das rituelle Sūtra des Baudhāyana 60): Pkt. vaṇḍha-, m. "bond, fetter" (bandhaḥ, Deśīn. 7, 29) 156), Skr. lex. vaṭ-, vaṇ(ḍ)-, maṇḍ- "to wrap, envelop" (vestane), vata-, vatākara-, m., vatārakā-, f. "string, rope", vațara-, m. "veșțaḥ". Pa. vațākara- "rope. cable", Hi. bidā "a bundle, roll (of paper, twist of grass, fibre of a plant)", bida, beda, baida "crooked. transverse, cross, awkward", $b\tilde{i}d\bar{i}$ (dial. $m\tilde{e}d\bar{i}$, $m\tilde{i}d\bar{i}$) "the hair twisted or plaited behind", baūdnā "to entwine, twine round", Nep. bito "bundle, sheaf", biro "mat made of grass", biro "betel encased in sāl-leaf" (Skr. vīṭikā-, f. "roll of betel-leaf"), etc.; Buddh. Skr. moṭa- (vv. ll. muta-, mūṭa-) "bundle", Pa. mūtoļī- (vv. ll. muṭoli-, putoļi-) "bag, provision-bag", Hi. mot, motrā "bundle, parcel, package, load", perhaps Skr. mūta-, mūtaka-, m. "wickered basket" : Skr. pūla-, poṭala-, m. "bundle", Pa. puṭaka-, n. ''bag, knapsack, basket'', Pkt. poṭṭala-, n. ''vastranibaddhadravyam'' (Deśīn. 2, 34), Mar. poţlā, poţlī "objets enfermés dans un bout d'étoffe" (Bloch 371). Hi. pot "bundle, bale, package", potlā "a large bundle" (= mot, motrā), etc. See Turner s.vv. motak "ring of twisted kuś grass", mornu "to bend, twist, fold", baţārnu "to twist, distort", and p. 23.

Equally numerous are the loanwords in Dravidian, e.g. Tam. poti "pack, bundle, load", poṭṭaṇam "small bundle, parcel" (: Sgh. poṭṭaniya "bundle"), Tel. boddu "a rick or bundle of grass", poduga "a parcel or packet fastened in leaves", pottara, potaka "a pack or bundle of leaves", poṭamu, poṭṇamu "packet, pack, bundle, little bag", Kann. poṭṭana, id., pode "quiver, bundle" (: mūḍige "quiver"?), moṭṭe "leather bag, bundle, load", etc. Is Tam. maṛi. Tulu mari "ram" also a loanword?

Since *meṇḍa denotes the curved horns of any animal, it may be applied to both sheep and goats, in accordance with the Dravidian use of denoting these animals by a general term (Tam. āṭu, etc.). Hence the contrast between M. miṇḍi 'a sheep, one having shaggy hairs' and Hi. miḍī "a she-goat". S. merom (M. Bh. Ho. merom) and J. mera "goat" may belong to the same affiliation and K. bherki "the fourhorned antelope, barking

¹⁵⁶⁾ Pkt. maṇṭa-, v.l. of mañca- "bandhaḥ" (Deśīn. 6, 111), may be of interest for the explanation of mañyīra-, n. "chain, fetter" (Skr. "anklet"). But cf. Skr. hiñyīra-, m. (wrongly Bloch 381).

deer" (Gondi id.) is possibly also connected. On the other hand, So. kim-méd'- seems to be an onomatopoea, cf. kim-méd-ĕn m'ēd gāmte "the goat says 'me" (Ramamurti, A Manual of the Sora Language 149). Pkt. cimiṇa- "ram, hog" and gāmeṇī- "she-goat" are ambiguous (the latter word is explained as standing for *grāma-eṇī-).

See further s.vv. āpīda- and kabarī-.

58. laguda-, m. "a club, cudgel".

Since Mhbh. and Manu in common use in literature. Much rarer is lakuṭa- (Āpast. S'r. S., Caraka, cf. lakuṭin- Rām.), which is generally regarded as the older form of the word (e.g., Wackernagel, Altind. Gramm. I, 117) and connected with Latin lacertus "upper arm". Although this etymology is accepted by most scholars the meanings of both words are widely different. Walde-Pokorny, II, 420, assume a primary meaning "ein zum Schlagen verwendeter Schenkelknochen", which is however quite hypothetical. A different explanation has been propounded by Przyluski, BSL. 24, 121 f. (Pre-Aryan and Pre-Dravidian in India, p. 12), who derived the meaning "stick" from "membrum virile" and compared lāṅgūla-and liṅga-. But liṅga- is no Proto-Munda word, and lāṅgūla- probably contains a prefix la- (like lāṅgala- "plough").

Pkt. lakkuda- (see Turner s.v. lauro) points to a foreign origin, so laguda- may be a Proto-Munda word. Since Santali has a word gudna "a short club or cudgel" it is tempting, then, to analyse la-guda- (with the same prefix la- as lāngala-, etc.). Bodding connects guḍna with guḍma "oblong and round". This may be correct but on the other hand the notion "short" which $gu\dot{q}n\dot{q}$ implies points rather to the root $ga-\dot{q}a$ "short, stunted", cf. gandra gundra "small, stunted, puny", gandke "log, stump of wood (large and thick)", etc. (see s.v. khadga- "sword", and for the semantic relations see s.v. dandá-). It is mostly impossible to decide whether the notion "round, globular" or "short" is predominant in a word for "club". Thus M. tempā "a short stick for driving cattle, having a knob at one end" may be connected with M thepa "short in stature, a dwarf" 157), but the last restriction points to an association with such words as M. dheb-dhebe. dhebra "big-bellied", dhimsi "a big-bellied woman". Often a similar contamination of notions will have taken place as in M. demkā "dwarf and big-bellied".

With this restriction we may connect laguda-, lakuṭa- with Pali kuṇṭa- "stunted, dwarfish", lakuṇṭaka- "dwarf", Bashkarik lukuṭ "small" (p. 40). But Skr. lex. potagala- "a kind of reed' (Amara, Hemac., Medinī), < wa-da (S. poṭak' "to peel off", p. 98; cf. vắṇī- "reed", p. 34) + ga-da (S. ghal ghalao "to skin", p. 52!).

¹⁵⁷) Root da-wa "short, stunted", etc. (hence Pali chava- "vile, low, miserable, wretched").

59. langa- "lame"

Comm. on Kāty. S'S. 22, 3, 19; "lameness" Aśvavaidy. Cf. laṅgati "gatau" Nir. 6, 26 ("khañje" Vopadeva); laṅgin-, liṅgika-, liṅgita-, n. "lameness" (Aśvavaidy.), ati-laṅgati "limps" (ibid.), Hi. lāgaṭ, laṅgṭā "lame".

An Indo-European etymology has been given by Lidén, Studien zur altind. und vergleichenden Sprachgesch. 46, who compares Germ. *link*, Swed. *linka* "to limp, hobble", Latin *languēre* "to be weak". etc. Most scholars seem to have accepted this explanation, cf. Persson, Beiträge z. indog. Wortforschung 131 ff., Wackernagel, Idg. Forsch. Anzeiger 12, p. 21, Walde-Pokorny, Vergl. Wörterb. II, 713 (who however express some doubt as to the relationship of *langa*- to those words).

Variants with i are lingita-, occurring thrice in the Aśvavaidyaka (pw. VII, 371) and probably lingati "gatau" (Dhātup. 5, 48) (cf. langati and lankhati "gatau", 5, 25), Beng. lengcā, nengcā "to limp" (Chatterji 889). As the ablaut suggests a Proto-Munda origin, we may compare the following Santali words: lokre "crooked, bent, injured, hurt, deformed", lukre, lunka, lunkai, lunkar, lunker "maimed, injured, broken (hand or feet)", lokret' lokret', lukret' lukret' "hobbling, limping", lokvet' "a bend, bent, curved (branch)", lulurkuc' "bent and stiff", lokea, lokhea "crooked. bent, not straight", lakruc' "to bend, receive a curved or angular shape, to fall from weak knees", lakuc' "to bend, walk bending one leg, weak-kneed", lakur "weak, powerless, lame, shattered", lakac' lukuc' "weak-legged, tottering, rickety", lakar lukur "weak, frail, shaky, nervous, to shake, tremble", langar lungur "weak, stiff (e.g. on account of rheumatism), feeble, strengthless".

We shall not enter upon a discussion as to whether these words properly belong to two different roots ("crooked" and "weak"). It may only be pointed out that the sense "crooked" often implies "lameness" (see the discussion of kuṇi- s.v. khora-) and that the words quoted are obviously connected with others which have initial d, d, cf. deket' deket' "weak, feeble, shaking", dakac' dukuc' "to become old and weak, shake (from weakness), totter", dhakuc' bakuc' "crooked, lame, limpingly", etc. We are thus led to assume one or two roots da-ka, langar lungur and Skr. langa- thus representing the nasalized variant da-na. The form lankhati is particularly interesting but the general interpretation "gatau" does not allow us to base further speculations on it. See further Turner s.v. lanaro.

60. lampața- "covetous, greedy for, esp. licentious".

Cf. strīṣu lampaṭaḥ, strīlampaṭaḥ, parastrīlampaṭaḥ, but also bhoga-lampaṭaḥ (see the Pet. Dict.). Similarly Hi. lampaṭ "covetous, greedy, lustful, addicted to licentious pleasures, lascivious, lecherous, dissolute, false, lying". From Proto-Munda, cf. Skr. lex. limpaṭa- "den Mädchen nachgehend".

With prefix la- from root ba-da, cf. S. lamot, lampot "playful, lascivious, licentious, shameless, levity, frivolity", and batu, batua, batwa "loose, lascivious, licentious, dissolute, wanton", bhand, bhand,

61. lalati "sports, dallies, plays, coruscates, fawns (dog)";

caus. lālayati "causes to sport, caresses, fondles, cherishes, loves" (since the epics). Pali lal- "to dally, sport, sing" points to *lad-, cf. in the Pāninean Dhātupātha lada- "vilāse", lāda- (lādayati) "upasevāyām"; the latter form is also taught by Candragomin (Renou, Études de gramm. sanscrite 97), while upalādayati Divyāv. 114, 26; 503, 9 reflects Pali upalāļeti "caresses, coaxes, fondles, wins over". Lüders, Philologia Indica 555 f., is accordingly right in positing a root lad-. It may be added that ladant- is very common in Ksemendra's works, cf. Bharatamanjarī 3, 1799; 13, 1222; 19, 897; Brhatkathāmanjarī 9 II 55. 316. 648. Ladita- occurs, e.g., Bhāratam. 3, 773, but the common form is lalita- (1, 768; 3, 846, 1864, etc.). Viladita- is quoted from S'rīk. 5, 9. Since the derivations which have been proposed are based on the assumption of a root lal-, they are no longer discussible [Fick: Germ. lallen, see Wackernagel, Altind. Gr. I, 219; Uhlenbeck: Russ. lelĕyat' (cf. Berneker, Slav. etym. Wb. 700), rejected by Lüders, l.c.; Wackernagel, p. 222: lad-perhaps from lal-; only Benfey started from lad-, see Lüders]. In the following we shall distinguish between I. lad- "to fondle. love", and II. lad- "to dally".

It has long been observed that Skr. laṭaha- and laṭabha- 150) "nice, pretty" are Sanskritizations of Pkt. laḍaha- "pleasing, agreeable", but the origin of the last word was unknown (Wackernagel, I. p. LIII with n. 5). It clearly is a derivative from I. laḍ- with the characteristic Proto-Munda suffix -ha (cf. kalaha-, paṭaha-, maṭaha-, etc.); cf. the unsuffixed form in Pkt. laṭṭha- "attached to another woman, lovely, charming, speaking sweetly" (anyāsaktaḥ, manoharaḥ, priyamvadaḥ, Deśīn, 7, 26). Pa.

The last word means 'fat, lazy and licentious' (contamination with ba-da "fat" and the root discussed s.v. baṇdá-, cf. bod bodo "lazy, idle").

¹⁵⁸⁾ Laṭabha- frequently occurs in the Vıkramānkad (see pw. and add 8, 86: 12. 66); laṭaha- is once attested in a commentary (pw) and occurs in the Yaśastil. (Schmidt, Nachtr.), laḍaha- in Kādamb. 241, 13 Pet., etc. (see Pet. D. and Bohtlingk).

latthaka-"beautiful, lovely". The surd in lattha- and the vowel variation in Pkt. littia- "pleasing, agreeable" (cāṭuḥ, Deśīn. 7, 22) point to a Proto-Munda origin; cf. perhaps also Pkt. lolantia-, id., which may contain a prefix lo- and the nasalized root form lant-. The NIA. congeners suggest different originals, cf. Hi. lāḍo "beloved (woman or daughter), pet". lāḍā "beloved, pet, darling, tenderly nurtured", lāḍ, lāṛ "affection, tenderness, coaxing, caressing, blandishment (and: sport, play)". laḍlā, laṛlā "darling, tenderly nurtured, petted, spoilt (child)", Si. lāḍlo "beloved", lāḍa, Panj. lāḍā "fiancé", Panj. lāḍ "love" (which Bloch 398 wrongly connects with Skr. Pkt. laḍḍu- "cake") 160), and Hi. laṭṭū, laṭuā "enamoured, in love, dizzy", Nep. laṭṭu, lasta "enraptured, enamoured, mad for", lolo-poto "flattery, compliment". lallo-pato id., Guj. lātho "paramour".

Beside these words there are some words with initial palatal, e.g. Skr. catu- "courtesy, flirtation (Hemac., Med., Trik.) 161), catula- "courteous" (S'āntiś., Gītagov.), catura- "charming, pleasing" (Raghuv.), cāṭu-, m.n. "courtesy, flattery, politeness" (Rtus., Pancat., etc.); with palatalized t: Skr. lex. cañcala-, m. "lover" (Hemac., Med.), if this word is connected with Hi. coclā "endearing arts and expressions, playfulness, fondling, dalliance, blandishment, coquetry", Mar. coclā "caress, coquetry", etc. (Bloch 332). If these words are ultimately connected with lad-, lat-, we should have to posit a Proto-Munda root da-da. Although the evidence now available does not admit a decision, this hypothesis would become more plausible if variants with initial j- could be shown to exist. Such a word is perhaps Skr. jārá-, m. "paramour, lover, friend" (since the RS.), which in the older literature is also used in a not unfavourable sense. Shina, Kshm., Western Pahari (Bhadrawahi dial.) yār and Si. jār point to an original *yāra- (see Turner s.v. jār). Derivation from *dada may be suggested as a possible explanation.

In any case we may compare S. alar "fondling, petting, spoilt, petted, to fondle, dandle, etc.", alar dular, id., alaria "accustomed to be petted, etc. who wants to be fondled", dular "love, affection, to love, caress, fondle", dular, dulari(a) "beloved, dear, petted", dularo "loving, beloved", M. dulār "to love, darling, dear". The correctness of M. ālā dulā "dear, beloved" is doubtful, since the radical element is -lar 162). Hi, dulār "fondness, love, affection", Nep. dulār "dalliance, love-making, love" are clearly Munda loanwords and need not, therefore, be derived from "dulla-kāra-(as Turner suggests). The Nep. word shows contamination of the two homonymous roots (cf. Nep. lār "dalliance, amorous play": lāre 'fondling, caressing, pet, darling").

¹⁶⁰⁾ As for laddu-, see s.v. kamatha-.

¹⁶¹⁾ Cf. Mar. cād "desire, affection". Si. cādī "desire", Panj. cāt "predilection" (see Bloch 328 f.).

¹⁶²⁾ Cf. Bhaduri, Addenda. Perhaps a loanword from Ho?

Skr. II laḍ-, lal- "to dally, sport" seems to be a different root, although secondary contamination is often found: Pali however distinguishes between līṭā, līlā "play, sport, dalliance" (used together with vilāsa-) and līṭhā "grace, ease, charm, adroitness" (always applied to the Buddha). The second word may also account for Skr. ākṛṣṭalīla-, Raghuv. 6, 1 (= gṛhītasaubhāgya-, Mallinātha) 163). Coomaraswamy's identification of Pa. līṭā and līṭhā (JAOS. 61, 98 ff.) is not sufficiently founded. Note also Pa. lāṭana- "swaying, dalliance, sport", which is different from Skr. lālana-, n. "caress", and Hi. laṭ "playful, wanton, coquettish", laṭak "coquetry". Variants with assibilated cerebral show similar meanings, e.g. Skr. lasati "dallies, sports", lāṣayati "causes to dance", laṣva-, liṣva-, m. "dancer"; cf. laṭva-, m. "jātiviśeṣaḥ" (= neṭhuyā "dancing boy") and laṭ- "bālye" with unvoicing of ḍ. To this root belong Hi. allaṛ, allaṛh "childish", Mar. alhaḍ, etc., Nep. allare "childish, boyish, irrespondible, a youth".

62. lorāyati "vilocane".

Only recorded by the Gaṇaratnamahodadhi. Root dar, cf. S. aṇḍar oṇḍor "staring vacantly, to look about, stare with wide open eyes", aṇḍor oṇḍor, iṇḍor oṇḍor, oṇḍor oṇḍor, id., ạṇḍir kuṇḍir "staringly, to stare, gaze, gape, be confounded", kare ḍhare, kare ḍhere "staring, fixedly", ḍhere ḍhere, ḍhere ḍhec' "staringly, with eyes fixed", ḍhoro ḍhoro "staringly, to stare", maṭar muṭur "to gaze, look round", muṭur muṭur "staringly, with eyes fixed", So. tur-túr "to watch".

On the other hand there are some words which point to a root $l\alpha d$, as M. lodo "to look on whistfully while others are eating, to look out for something hidden from view", S. loryo, loryot', loryot' "staring, gaping, gazing, stupid", lando londo "staringly, glaringly, to stare with wide-open eyes", londo londo "staring, etc." londkot' "staring, one who has big eyes", etc. M. loro "to see without being seen, to lie in wait of, keep watch over one's coming", Ho loro "to look out for" may be connected with them.

Still other words contain a radical element ral, as S. rolo rolo "steadfasty (look, peer)", morol morol "staringly, intently, with eyes riveted on", merel "to look at yearningly, long for" (?), jaral jaral "with staring, flashing eyes" (contamination with jaral jaral "glowing"), jaral jurul "staringly (look)", jorol jorol, jurul jurul "fixedly, to eye, peep at, peer at", M. gurul gurul "to look with a fixed stare", So. orôl "to watch".

The roots dar, lad/lar, and ral are apparently dialectal variants, which presuppose a root da-da "to stare". Cf. Mon pelòn, telòn "to stare".

¹⁶³⁾ The IE. etymology proposed for Skr. $l\bar{\imath}la$ - "play" (<* $lizd\bar{a}$, cf. Lat. $l\bar{\imath}udus$; see von Bradke, KZ. 28, 1887, 298, n. 1 and Wackernagel I, 219, 222, 275) is unsatisfactory. See also Coomaraswamy, p. 99 (root $l\bar{\imath}$ -).

63. lola- "greedy, eager, longing for".

Since Var. BS. and Kālidāsa, cf. Megh. 61 krīdalola- (: krīdāsaktaḥ, pramatta ity arthaḥ, Mallin.), 100 (103) lolaḥ kathayitum (: lālasaḥ, Mallin.); cf. Amara lolaḥ cala-satṛṣṇayoḥ. Derivatives: lolika- "lustful, lascivious" (Kuṭṭanīm.), lolatā- "voluptuousness" (Suśr.), "desire, longing" (Sāh. D.), lolībhāva- "desire" (comm. Yaśastil.), laulya- "greediness, eagerness". Lola- is usually connected with lul- and regarded as an enomatopoea (see Uhlenbeck, Walde-Pokorny, Vgl. Wb. II, 376).

A verse of Yādava's (quoted by Mallinātha ad Megh. 100) mentions the following synonyms:

lolupo lolubho lolo lālaso lampaṭo 'pi ca.

According to Wackernagel's plausible explanation, however, lolupa-"ardently longing for, desirous of" (Mhbh., Rām., Suśr.) is derived from a nom. sing. *lolup (stem lolubh-), which excludes a connexion with lola-(see Sitzungsber. Berl. Akad. Wiss. 1918, 381, n. 1). The latter word reminds us, however, of the Skr. root lal- "īpsāyām", cf. Pa. lal- "icchā". The distinction which the later Dhatupatha makes between lad- "vilase, upasevāyām" and lal- "īpsāyām" is rejected by Kṣīrasvāmin and Puruṣakāra on account of the identity of d and l (dalayor ekatvāt), see Lüders, Philologia Indica 555. As a matter of fact, there are several indications pointing to a root lad-, e.g., Pkt. ledukha- "covetous, greedy", Pa. lola-(in dhanalola-), and probably even Skr. lasati "desires, longs for, strives after" which is generally explained as a reduplicated present *la-ls-ati and connected with Greek hhaloual, Latin lasciuos, etc. This connexion, however, though sanctioned by a long tradition (see A. F. Pott, Etymologische Forschungen I, 1833, 271), is open to serious doubts. The root las- in the Greek and Latin word (cf. also Goth. lustus, Eng. lust) is likely to represent IE. *lħs- on account of Old Ch. Slav. laskati, Ruthen. lásyj (IE. *leħs-). The loss of the consonantal ħ after reduplication might, it is true, be paralleled with dadmáh, etc., but any direct evidence for the existence of a Sanskrit root las- is wanting 164). On the other hand, the assumption of a Proto-Munda root lad- may also account for Ass. luturā "sensual" (wrongly Turner s.v. luto), Nep. lucco "profligate, roque, blackguard", Or. loccā "profligate, lewd", Hi. luccā "a dissolute fellow" and Skr. lex. lusabha-, m. "elephant in rut" (Ujjvalad.), which cannot be separated from Dhtp. lotati, lodati, rodati "unmade". The derivation from rṣabha- (Wackernagel, I, 22; cf. Tedesco, JAOS. 65, 96), which presupposes a very doubtful sound development, is also unacceptable on account of the semantic difference. Lus- is a variant of las- (lasati).

There are some NIA. words which suggest that the initial l, too, is

¹⁶⁴) As for lasati, cf. Wackernagel I, 238; for dadmáh see however "India antiqua" 206.

a variant of d/d, e.g. Hi. cul "longing, craving, eagerness, lustfulness", cullī "lewd, libidinous, man", culhārā "wanton, lustful, lascivious", codū, id., coj "eagerness, fondness", cot "desire, wish, aim". Similar variants with c were found to exist beside *lalati* (q.v.). They necessarily introduce an element of uncertainty into these studies, the results of which would doubtless be more convincing if we should let these forms out of consideration. We cannot, however, ignore this more problematic side of the question, the less so as the same problem recurs in Munda. Cf. S. lalao, lolao "to starve, long for, hunger for", lala lali "id., hungering for, hankering for", lalkao, lalka lalki, id., lalca (M. lalca) "covetous, envious", laloc "desire, greed, lust, to cover, lust after" (= Hi. lālac, Beng. lalac), laloci, lalocia, lalosia "covetous, greedy", lilkau = lalkao; lilka lilki "to cause to long for, to coax, to long for", luluau (lulwau, lulhau) "to wheedle, coax, beguile"; loro loro "greedily, hastily, to be eager to eat", locor "craving, appetite", lar larao "to be eager", lar kharao "to be fidgety, eager". Variants pointing to an ultimate root da-da are, e.g., thur thurau "to be eager, desirous, solicitous", that tharao "to be intent on, anxious about", thare mare "eagerly, impatiently", tilki bilki, chilki bilki "eagerly, restlessly" (cf. lilka lilki; contamination with $d\alpha$ - $d\alpha$ "impatiently, restless, unsteady", cf. lilo loko, loro thoro, loto thoro, culur bulur, culbulia, etc.), cut cut "craving, longing for, to be eager, greedy, restless, impatient". Since there can be little doubt as to the Proto-Munda origin of these words (note the ablaut a: o), the Hindi equivalents lalak "eager desire", lalaknā, lalacnā, lalsānā, laliyānā, lilānā, lilyānā "to long for, covet", lallo "desire" (cf. Pkt lallam "eagerly") must be borrowings.

The question thus arises whether the common view that Skr. $l\bar{a}lasa$ -"ardently desirous of" (since Mhbh., Rām.) is an intensive formation of las- is correct. The assumption of this root is based on this word and lasati only. In Santali and Hindi $l\bar{a}las$ - is a mere variant of $l\bar{a}lac$ -, which must be the older form as only c>s is possible. Accordingly, Skr. $l\bar{a}lasa$ -must either contain a suffixal element -as- (cf. S. khakosia "frail, weak": Hi. khakh "weak": lerosia "frail, weak": lorosia "

64. vātuli- "a certain kind of vampire".

Platts, in his Hindūstānī Dictionary, derives the Hindi word $b\bar{a}dur$ "flying fox, bat" from Skr. $v\bar{a}tuli$ - "a certain kind of vampire" which is only attested in the lexical work Hārāvalī. Beng. $b\bar{a}dud$ however shows the Hindi r to stand for d, which suggests the possibility of a Munda origin. As a matter of fact, we find in several Munda dialects a word for "bat" which contains the radical element $d\bar{u}d$ ($t\bar{u}d$); cf.:

Santali bardūrūc' "bat".

Mundari bārduriad, bārdulud (Bhaduri, A Mundari-English Dictionary).

bārdulid' (Rakhal Das Haldar, JASBeng. 40, 1871, p. 65). [bhadli, bhādur, from Hindi].

Ho bārdui, in chútú bardwi (Ball, JASBeng. 40, p. 107), which stands for *bārduṭi(c') with the regular loss of ṭ in Ho.

bāduri (L. Burrows, Ho Grammar 15↓, cf. JBORS. 5, 255) "flying fox", which seems to be due to metathesis (for *bārdui).

Kurku gadur "vampire bat, a flying fox".

Sora kĕntûr- "bat" (cf. K. tiru "bat"?).

As for the last word, it has been pointed out above (s.v. undura-) that So. $k\bar{e}nt\bar{u}r$ - may as well be connected with So. $gunt\bar{u}r$ - "rat". Both groups of words (those for "bath" and for "mouse, rat") may even be ultimately allied but there is no evidence thus far that the words for "mouse" originally had a d for r. Moreover the proper sense of $d\bar{u}d$ in the words quoted above seems to be "to flutter" on account of M. burdulud "flying ant" (cf. Dutch vledermuis: fladderen, Russian $let\bar{u}\bar{c}aya mys'$). The connexion with S. $d\bar{u}r\bar{u}c'$ "to tilt a vessel, to spill", suggested by Bodding, is not acceptable since $d\bar{u}r\bar{u}c'$ is used only about a pot, etc., containing some liquid.

S. K. Chatterji, in Pre-Aryan and Pre-Dravidian in India, p. XXI has proposed an explanation of Beng. $b\bar{a}dud$ by connecting it with Semang kawet, etc., which induced Ramaswami Aiyar, JBORS. 16, 324—326, to consider the question of the origin of the various Dravidian and Munda words for "bat". It will be clear, I think, that H. $b\bar{a}dur$ and Beng. $b\bar{a}dud$ are derived from a Munda form $*b\bar{a}(r)dud$, while the modern Kherwari dialects have lengthened forms with the suffixes -uc', -ic' (?), -ut', -it', -iat'. As Skr. $v\bar{a}tuli$ - is likely to be etymologically connected with H. $b\bar{a}dur$, it must represent a Sanskritization of Pkt. $*b\bar{a}duli$, which again stands for $*b\bar{a}(r)dulic'$ (or $*b\bar{a}(r)dulit'$, see p. 120, n. 165).

Böhtlingk and Roth, s.v. vātuli-, rightly point to tarutūlikā (v.l. tarudūlikā) which is recorded by the Hārāvalī as a word for "vampire". It may reflect a Proto-Munda word *těr-tūdic', *těr-dūdic', the prefix having been changed through popular etymology. Cf. Bashkarīk šuṭūṭar "small bat" with a prefix šu- (as in šōrúṇḍ, p. 80, Skr. sutintidī-, p. 135) and perhaps Skr. lex. titīla-, m. "bat".

As for jatū- "bat", see undura-.

65. śakúnti-, m. "bird".

Twice in the RS., then imitated in the Kāvya poetry (Bālar., Uttararām., S'ıś.). Hence the deminutive śakuntiká- (RS.¹, Vāj. S., Mhbh.)? But the masculine śakuntaká- (RS. Khila, Vāj. S., Mhbh.) is hardly due to false analogy as we find also śakúnta- (Ath. S., Mhbh., śakuntalā-, Bhāg. P.) and śakuná- (RS.¹², Ath. S., YV., Brāhm., Epics, Yājňav., Suśr., Varāh.

Bṛh. S., Rājat.). Only the last word and śakúni- (RS.3, Ath. S., Kāṭh. S., Brāhm., Upan., Epics, Class. lit.) have been in common use throughout all the periods of Sanskrit literature.

The etymology of sakunti- etc. has often been discussed but no satisfactory explanation has yet been given. Fick, Vergl. Wörterb. der indogerm. Sprachen, I4 (1890) 45, 425 compares Greek κύννος, Latin (ci)conia "swan" and Church Slav. sokola "falcon", the primary meaning being "hanging, hovering" (: śańkate!). But zúzros is hardly an Indo-European word. The connexion with Skr. śocati (zúzros being the 'white' animal), though accepted by several authorities (Boisacq, Walde-Pokorny) is characteristic of an obsolete method of etymologizing. As for ciconia, it may belong to cano. Thus there remains the connexion of śakúni- with sokolo which is already found in Miklosich's Lexicon Palaeoslovenico-Graeco-Latinum (1865). Miklosich rejected it later on in his Etym. Wörterb. der slavischen Sprachen (1886) but in Uhlenbeck's etymological Sanskrit dictionary it returns, although with some doubts on the author's part. In his turn Uhlenbeck abandoned the etymology in Paul and Braune's 'Beiträge', vol. 35, p. 171, where sokol's and Lith. sākalas are derived from a hypothetical root *sequ "to shine" (for similar conjectures of other scholars see Walde-Pokorny, Vergl. Wb. I, 456). After having twice been abandoned by its advocates the same theory reappears in Walde-Pokorny. We now await Pokorny's conversion.

The main difficulty of śakúni-, śakúnti- is of course the peculiar word-formation. I do not know of any attempt to explain it, nor have I seen it acknowledged that a difficulty exists. Osthoff, Etym. Parerga 246, discusses IE. animal names in -no-, among which śakúna- occurs, but he wisely omits to mention the existence of śakúnta- in this connexion. Specht, Der Ursprung der idg. Deklin. 222, it is true, quotes many IE. names of birds with suffixal t, but is śakúnti- an IE. word?

A Proto-Munda root *tit' underlies the following words for "bird":

- 1) with prefix ti-: Kw. tīti, K. titit' (tītīt'); cf. So. titid- in the language of children.
- 2) with prefix kon-: Kh. konthed, konted (konter), J. konter, So. ontid'.

The last words point to a Proto-Munda word *ku-ntit', a variant of which was *ku-nit' (see Introduction). We may reasonably suppose, therefore, that $\acute{s}ak\acute{u}nti$ - and $\acute{s}ak\acute{u}ni$ - reflect these Proto-Munda words augmented by a new prefix $\acute{s}a$ -. The checked t'^{165}) has disappeared so that the words have become inflected according to the i-declension of Sanskrit. $S'ak\acute{u}nta$ - and $\acute{s}akun\acute{a}$ - must then be innovations of Sanskrit, the source of which is not quite clear.

¹⁶⁵⁾ The checked k' is represented by k in Skr. lex. $bh\bar{u}ka$, m.n. "hole": S. bhuk' and in $Mand\bar{a}kin\bar{\imath}$, if my suggestion that it is derived from dak' "water" is correct (Acta Orient. 17, 17 ff). In NIA. the checked consonants in loanwords as a rule become surds. It should however be noted that the case of t' after a front vowel is different from k' after back vowels. Cf. also $v\bar{a}tuli$. < * $b\bar{a}rdulic'|t'$ (p. 119).

S'akuna- was also the name of a people or tribe. In Mhbh. 7, 20, 11 B. they are mentioned together with the Gāndhārāḥ. Probably S'akuni-, the well-known uncle of the Kaurava princes and king of Gandhāra, also bears a tribal name. In any case the name betrays the existence of a Proto-Munda population in the extreme North-Western part of India whose name was probably derived (like most names of Proto-Munda tribes) from the tribal totem, whatever kind of bird may have been designated by that name ¹⁶⁶). If so, the name of the people of the Kuntis may possibly be identified with Kh. konted.

66. S' ár k ar ā-, f. "gravel, grit".

Since Ath. S., Taitt. S., Taitt. Br., S'at. Br., in common use throughout the Sanskrit literature; also "coarse brown sugar" (Hariv., Suśr., Varāh. Bṛh. S., etc.); śárkara- "consisting of gravel or grit", m. "pebble" (S'at. Br., Kāty. S'S., Kauś.). A Sanskritization of the corresponding Pkt form of this word is met with in śakvarāḥ = prastaraśakalāni, comm. on Kām. Nītis. 4, 53, which is rather a misprint for *śakkarāḥ than for śarkarāḥ (as the Pet. Dict. assumes). It has been connected with Greek κροκάλη "pebble on the sea-shore, shore, strand" (Fick, Vergl. Wörterb. I‡ 46, 425, Walde-Pokorny I, 463; rightly questioned by F. Muller, Grieksch Woordenboek s.v., and Frisk, Zur indoir. und griech. Nominalbildung 36): unacceptable because κροκάλη (since Euripides) is a Greek derivative from κρόκη. On the other hand, the assumption of a suffix -kara- for táskara-, púṣkara-, puṣkala-, etc. (Pisani, Riv. degli Studi Orient. 18 [1939], 102) is based on an incorrect analysis of words which are certainly not of IE. origin.

 $S'arkar\bar{a}$ - does not survive, it seems, in modern Aryan. Instead of it we find descendants from Skr. karkara-, m.n. "stone, limestone, especially the nodule found in Bengal under the name of kankar" (see Schmidt, Nachtr.). Cf. Pkt. kakkara-, m.; Hi. kankar, kankar "a nodule of limestone, limestone (of a coarse kind found in many parts of India, and used in making lime, roads, etc.); stone, gravel, pebble", kankara "a nodule or piece of kakar, a pebble, a stone", kankara "id., a small round stone or pebble; gravel; a small lump (of sugar, or salt, etc.)." See Turner s.v. and cf. Tam. kankara, Tel. kankara, Kann. kankara "gravel".

S'arkarā- and karkara- show a similar variation of prefixes as, e.g. śarkoṭa-, and karkoṭa-. The radical element which they have in common is accordingly -kar-, cf. Skr. karaka- "hail stone" (Kālid., lex.), kara-, id. (lex.), and in Munda: S. muṭkuri "small stones like gravel", moṭkori "small

¹⁶⁶⁾ As several scholars seem to attach some value to Sāyaṇa's rendering of the word as *kapiñjala-* "a kind of partridge" (Grassmann, Wb., Osthoff, l.c., Walde-Pokorny), it may be noted that Sāyaṇa renders everywhere *pakṣin-* except for 2, 42, 1. 3 and 2, 43, 1. 2. 3 (where *kapiñjala-* is due to Bṛh. Dev. 4, 93, see Geldner) and 10. 16. 6 (*kākākhyaḥ!*).

gravelly stones, gravel (but not of quartz or white stone like $kak\varrho r$)", M. moţkuri "gravel", guṛguṛ "gravel", K. gargadda "pebbles", Kh. gargaṛ "gravel". (S. kakջṛ, kaṅkջṛ, K. kāker, id. are Aryan loans). If these words are rightly combined, the root is $g\alpha d$ - or $g\alpha - d\alpha$.

The use of śarkarā- in the sense of "sugar" dates back to about the beginning of our era and is accordingly much younger than its application to "gravel". Nevertheless, in spite of such parallels as S. bali gur "crystalized raw sugar" (: bali "iron stone sand, iron ore"), Malay gula pasir "powdered sugar" (: pasir "sand"), it is doubtful that the meaning "sugar" is due to a semantic development of Sanskrit. Przyluski, Mém. Soc. Ling. 22, 208 ff. (not repeated in 'Pre-Aryan and Pre-Dravidian in India') was the first to point to some interesting similarities of Skr. śarkarā-, Pa. sakkharā-, Pkt. sakkara- "sugar" in Mon kaw, Khmer skar. Stieng sökor, Crau śkor, čkor. Since Meillet considered śarkarā- "gravel" a genuine IE. word, Przyluski suggested that *sakkarā "sugar" had been borrowed from some Austro-Asiatic dialect and, after having been identified with Pkt. sakkara- "gravel", had been Sanskritized to śarkarā-. I cannot propose a more plausible solution. It may only be observed that śarkarāshould rather be connected with Mon sakrē, thekrē "sugar" than with kaw, although -krē against -kor in the other languages is remarkable. These words point to the possibility that Proto-Munda also had a word *serkar(a) "sugar", but the materials now available do not allow us to decide whether this word, if it has existed at all, was identical with the word for "gravel".

67. $\pm r'n k h a l \bar{a}$ - "chain, fetter".

A word of the classical language (sometimes śṛṅkhala-). According to lexicographical works it also denotes a man's girdle (cf. Lat. torques). Some scholars therefore suppose some connexion with mékhalā- "girdle" and try to explain them as being words of IE. descendance, see Walde-Pokorny I, 409, II, 241 (hence Renou, Grammaire sanscrite 259: suffix -khalā-). On the other hand, the obscure word sṛṅkā- (Kath. Up. 1, 16; 2, 3) has been connected with it. It is sometimes translated "necklace" or "garland" (cf. S'ank.: śabdavatī ratnamayī mālā) cf. Deussen, Sechzig Upan. 269, Otto, Die Katha Upan. 29, Hume, The thirteen principal Upanishads 344, 346 n. 1, Rawson, The Katha-Upanishad 70. But many other renderings have been suggested, as "luxus, voluptas" (Kern, on account of śrngāra-), "way" (S'ank., Pet. D., which Zupitza, KZ. 36, 1900. 58, account with srank- "gatau", Lith. slinkti "to sneak", etc.). "bag. pouch" (Roth, accepted by Böhtlingk-Garbe, Chrestom.3 399), "slough, pool" (Whitney, Transactions of the Am. Phil. Assoc. 21, 1890, 95), "un involuto mantra" (Maryla Falk, Il mito psicologico 422). The interpretation of the two passages (one of which is probably an interpolation) is too

uncertain to allow any conclusion. The Middle Indian correspondences of śṛṅkhalā- are: Pa. saṅkhalā-, Pkt. saṅkhalā-, siṅkhalā, saṅkalǎ- (saṅkaliyā-), see Pischel, Gramm. d. Pkt. Spr. § 213. For the modern Aryan forms see Turner, s.v. sāṅlo.

As a loanword it also occurs in Dravidian and Munda languages. Tamil cankili, Malayalam cankala, have probably been borrowed from Prakrit. As for S. sikṛi, M. sikṛi (Bhaduri), sikṛi (Rakhal Das Haldar, JASB. 40, 49), sīkṛi (Mark. 5, 3), Ho sinki, sikri their Aryan origin is less certain, the less so since Sora has sikkĕdi-. By the side of Hi. sikrī "a small chain", it is true, the local dialects of Bihar have such forms as sikkaṛ, sīkaṛ, sikṛā, and sikṛī, see Grierson, Bihar Peasant Life § 107. On the other hand, such local words are often borrowings from modern Munda (cf. hurkā and prob. aṛkhaṛ, discussed s.v. argaḍa-). So. sikkĕdi- is also dubious (Munda *si-kaḍi or rather from Oriya sikuḷi on account of the final i?). K. sākaṛī, sakaṛī, sakaḍī (beside saṅko, sīko) have the normal ṛ for Mar. ļ (cf. Mar. sãkļī).

Whatever may be the exact relation between S. sikri and Bihari $sikr\bar{\imath}$, they point in any case to a cerebral. A confirmation is to be found in two Sanskrit words for "girdle" quoted in the Medinīkośa, viz. $śarkar\bar{\imath}$ and $śakvar\bar{\imath}$ (the latter no doubt miswritten for * $śakkar\bar{\imath}$), which reflect a Proto-Munda form *sar-kar-(i). Since Skr. $śrnkhal\bar{a}$ has an ancient l (cf. Pali $sankhal\bar{a}$), it must have been adopted from a Proto-Munda dialect where d had become l and reflect an original *ser-nkala.

As for mekhalā-, the analysis me + khalā is perhaps supported by Tamil kalai "woman's girdle consisting of seven strands of jewels". The Tamil Lexicon, it is true, derives it from Skr. mekhalā but possibly it represents the root word *kalā or *galā. However that may be, the prefix me- is a variant of the common prefix ma-, mar- (cf. s.v. bákura-) 167). It is tempting, then, to compare the Pkt. makkadabandha-, n. "a chain ornament worn across over the left and under the right shoulder" (śrnkhalarūpam grīvābharanam savyāpasavyam yajnopavītākāram, Deśīn. 6, 127). While mékhalā- (since Ath. S., Taitt. S.) must have been adopted, like śṛṅkhalā-, from a Proto-Munda dialect where d had become l, makkada- still preserves the original cerebral. That it is composed of a prefixal syllable mar- and a root kad- may be inferred from khādi-, m. (RS), lex. khad(at)ū- m. "ornament worn round the arms and legs", khadukā-, khaddukā- "pādapāśī". Cf. furthermore Skr. kaṭaka-(Pkt. kaḍaya-) "cord, string, bracelet", kaṅkana-, n. "ringshaped ornament, bracelet", Beng. khāru "bracelet", etc. The connexion of śrnkhala- with Old Icel. hlekkr "chain", Old Engl. hlence "armour" and Lat. clingere "cingere" 165) is accordingly to be rejected.

Thus mecaka- "dark blue, black" (since Mhbh.) may be connected with Mon mecòk, lecòk, lemcòk "black". Otherwise Candravṛṭṭi (from mac-, see Renou, Études de gramm. scr. 125) and Uhlenbeck, Paul and Braune's 'Beitrage' 26. 303 (Lat. micāre, Dutch meeuw').

¹⁶⁸⁾ Johansson, Paul and Braune's "Beitrage" 14, 298 f., Zupitza KZ. 36, 58, etc.

Class. Skr. nigaḍa-, n., "chain for the feet, fetter" (also nigala-, e.g., Daśakum. 122, 19; 125, 2 Agashe, and pp. 161, 162 Godbole in contradistinction to Agashe) has a meaning similar to śṛṅkhalā. Pischel, Sitz. Berl. Akad. 1903, 728 (in a discussion of vagaḍabhī) points to the fact that in Mahāvastu 2, 100, 3 and Lalitavist. 318, 2 nirgaḍa- is used for nirargaḍa- "ohne Hindernis, tadellos"; since gaḍa-, gaṇḍaka- is said to mean "obstacle" (antarāyaḥ), Pischel connects nigaḍa- (Pali nigaḷa-, Pkt. niaḷa) 169) with these words (cf. gaḍ- "āvaraṇe" Dhātup.); see also Johansson, Etymologie und Wortgeschichte 9 (with bibl.). Therefore Charpentier's view (from *ni-gṛto- = ninaddha-, ZDMG. 73, 150) is improbable. Since several Proto-Munda words are prefixed with ni-, nigaḍa- may be a Proto-Munda word 170). The proper meaning of gaḍ-must then have been "to bind" (cf. bandha- "chain, tether, bondage"). See also s.v. argaḍa-.

The derivation of angada, n., "bracelet worn on the upper arm" (since the Rām.) is doubtful. Seeing that most of the names for bracelets and similar ornaments are foreign words (kaṭaka-, $key\bar{u}ra$ -, $n\bar{u}pura$ -, etc.) it is unlikely to be composed of anga- and $d\bar{a}$ - ("to bind"?). Tamil ankatam also signifies "serpent" and "falsehood, abuse"; if these three meanings belong to one and the same word, its original sense must have been "twisting, bending" (cf. kuṭila-, kuṭilagāmin-). Otherwise it might perhaps represent Proto-Munda *a-ngada (from *a-ngada).

In this case, as in many others, the great number of possible phonetic changes in Proto-Munda enables us to combine words of a rather different aspect but diminishes at the same time the stringency of the demonstration. But the assumption of a root gad- "to bind" is supported by Skr. lex. gala-, Hi. gal(a) "noose, snare" and Sant. gali, id. (cf. perhaps gari suri "to bundle up, huddle up"). Scheftelowitz's connexion (ZII 2, 269) of gala- with gūlma-, m., "shrub, bush", Old Ch. Slav. golb "branch", Alban. g'al'm "rope" does not recommend itself. On the other hand, S. hari "to fetter, chain" may belong to the same root. In view of hari the question arises whether Skr. hāra-, m., "a necklace, string or garland of pearls" (Hi. hār, hārā "garland", Beng. hār "necklace", Nep. hāri "garland, necklace of coins set in rows", etc.) is really identical with hāra- "charming" as is generally supposed. However that may be, the meanings of śṛṅkhalā, mekhalā, kaṭaka- and nigaḍa- are so closely related (cf. Tam. caṅkili

¹⁶⁹⁾ For the Pkt. forms, see Pischel § 240; for the NIA. equivalents see Turner s.v. nel, Bloch 150.

¹⁷⁰⁾ Cf. nibida- (p. 148), na- in Pa. naṅgala-, S. naḥel (see s.v. hala-) and in Pkt. naḍulī-, ṇaḍulī-, ˈkacchapaḥ'' (Deśīn. 4, 20) : Skr. lex. dudī, dulī-, ḍulī-, f. (see Wackernagel I, 222), Nep. ṭhoṭari "tortoise". The following Skr. words are prob. Proto-Munda loanwords : nicumpuṇa- (RS, see Oldenberg, Rel. des Veda 399 n. 3 and Noten ad 8, 93, 22), nipuṇa- (cf. Pkt. chappaṇṇa- "clever", S. sarphạṭia, id.?), nikurumba- "multitude". Note also nikharva- "dwarfish" (Hemac., Kṣīrasvāmin ad Amara 2, 6, 46) = kharva-, id. (see s.v. khadga-).

"chain, link, chain-ornament of gold, inset with diamonds, hand-cuffs, fetters") that it is not unreasonable to assume their relationship. See further s.v. argada- 171).

68. śṛṅgāra-, m. "fine dress, etc.".

This word conveys rather different meanings, viz. 1) adj. "fine, beautiful" ("veṣa- Mhbh., "vaktra- Rām.); m. "ornament, fine dress" (Pañcat., Kathās., etc.). 2) "love, sexual passion" (Rām., Kālid., etc.). In NIA. languages only the first word seems to survive, see Turner s.v. sinār "decoration". It is generally derived from śṛṅga-, n. "horn" (Pet. Dict., Uhlenbeck, Frisk, Zur indoir. und griech. Nominalbildung 41), which however finds no support in its meaning. Like śṛṅkhalā-, śṛṅgāra- is a Proto-Munda loanword but, while in the first word śṛ- is a prefix, it here forms part of the root. The meanings "ornament" and "passion" belong to two different words, which will be discussed separately.

As for 1. śṛṅgāra- "fine, fine dress", we may compare the following Santali derivatives from a root $d\alpha$ - $k\alpha$ or $d\alpha$ - $g\alpha$, which, however, are partly contaminated with words meaning "shining, brilliant", and partly with a word-group with the sense "to grow luxuriantly, strapping, well-fed": cakmak "splendid, fine, beautiful, to show oneself off", cakmakao "to be ready adorned, make fine-looking", cakel makel "to show oneself off, strapping", cahak mahak, cohok mohok "smart, decking oneself (in one's finery), to show oneself off, deck oneself", cahak cõhõk "who decks oneself, shows oneself off, smart", cōhōk "fresh, bright, graceful, beautiful", cokon "to dress oneself finely", cikan cokon, cikon cokon "finely dressed, decked, smart, well-fed", celot' cekot' celkot' "finely, decked and tidied" [cigoe cogoe "elegantly, lightly (dance)?], chak mak, chok mok, chak makao "fine, shining, to make fine, deck oneself out", chak makia "finely attired or dressed, decorated, adorned, elegant, glittering; to tidy oneself up", chakel makel, chaker maker "well-made, handsome, graceful, elegant", chik chak (chik chik, etc.) "polished, shining, to tidy oneself up (put on one's finery, to wash and oil oneself)", jiki miki, jhiki miki "fine, shining, resplendent 172); to adorn oneself", jhingur "ear-ornament" (Campbell), seke seke, seke doke, seke meke "covered with ornaments, to adorn", digi migi "beaming, shining, with splendour and pomp, to show oneself jubilant", tek teke "the whole (arm, neck) full of ornaments". Cf. Nep. jhakkalo "showy, fashionable", jhakmale "showy, foppish", jhak-jhak, jhakā-jhak

¹⁷¹⁾ Toda tagārs "chain" (Pope) < *tagāl and Hi. tagṛī "a gold and silver chain, worn round the waist. a girdle, zone have curious parallels in the Philippines: Tagalog, Bisaya talikala, Tag. tanikala "chain" (which according to Kern are loanwords from Sanskrit, see Adriani. Sangireesche Spraakkunst 154). I must leave it to competent judges to decide if these words are connected at all.

¹⁷²) Cf. Nep. *jhaka maka* "shining, bright", *jag mag* "to glare, shine" (Hi. *jagmag* "dazzling light, glitter", etc.).

"splendour, grandeur", perh. also Skr. lex. canga- "nice", cf. So. langā "beautiful".

In digi migi and tek teke the original cerebral has been preserved, cf. also (seke) doke. Although Skr. \acute{srng} ara- may represent a Proto-Munda word * $ser{e}$ - \dot{r} - $\dot{n}(g)$ ar or * $ser{e}$ - \dot{r} - $\dot{n}(g)$ or 173) (with an r infixed between the two parts of the root), it is, in view of its comparatively late appearance in Sanskrit literature, not excluded that \acute{srng} ara- is a Sanskritization of Pa. Pkt. singara- (on the analogy of the correspondence Pa. Pkt. singa-: Skr. \acute{srng} ara- "horn", Pkt. singkhalā-: Skr. \acute{srng} khalā- "chain"). In that case Proto-Munda *singar or *singar would be a dialectal variant of S. lingar longar "finely dressed, to make a show of oneself, frivolously".

2. śringāra- "love" is likewise derived from a root da-ka or da-ga, cf. S. linger longer "frivolously" (contaminated, like some of the following words, with a derivative from the first root, see above), longor longor "merry, jovial, jolly, foppish, dandified, licentious, frivolous", longra "sensual, licentious, lustful, shameless, unchaste" (cf. Hi. langar "a dissolute fellow, libertine, rake", lungārā, lungārā "dissolute, profligate, lewd, lecherous"), lan cạngia "gay, jolly, a dandy, fop", (cf. M. lān cāngiā "foppish, dissolute"), lohok "jolly, sportive, showing oneself off", cok candal "libidinous, lustful". The same remark, as made above on account of 1. śrngāra-, applies to this word. While no theory can be based on śrigam hi manmathodbhedah Sāh. Darp. (see Pet. Dict.), the variant with i actually occurs in singa-, m. "libertine, rake" (Yaśastil.), which is hardly a misprint for sidga- (Hemac., Med.), cf. sanga-, m. (S'iś.), nāranga-, m. (Hemac., Med.; prefix $n\bar{a}$ -, cf. p. 124, n. 170), langa-, m. (= sidga-, Hemac., Med.), ṭānkara- (Trik.) "libertine, rake", lankā- "slut" (Hemac., Med., Viśvā), Tam. cankāļar "lustful persons, as prostitutes". Sidga- accordingly contains an infix -d-, inserted between the two parts of the root da-ga. I do not hazard to pronounce an opinion on Hi. dhaggar, dhagar, dhagra "paramour, lover".

69. hambā-, hambhā-, humbhā- "bellowing of a cow".

By the side of hambhā (since Mhbh. Rām.) a variant hambā occurs in Hariv. and Rājat. (see Pet. Dict.). The denominative verb hambhāyate is once attested in hambhāyamānā Mhbh. 1, 6670 Calc. = 1, 165, 22 Poona, where the Poona text records some interesting variant readings as humbh-, humph-, and hamv-. Similar variants are given for hambhāravaghanasvanā 1, 165, 32 Poona, viz. hambā-, humbhā-, humphā-. The Bombay edition of the Rāmāyaṇa (and modern editions based on it, as the Madras edition of 1933) read humbhārava- in Rām. 1, 54, 18 and 1, 55, 2 (hambhārava-von Schlegel). As the variation a: u is suggestive of foreign origin, the

¹⁷³⁾ For Skr. a representing Proto-Munda o, o, see s.v. hambā.

explanation of hambhā as an onomatopoea (Uhlenbeck s.v.) cannot be accepted without further inquiry. Now T. Burrow, Transactions of the Philological Society 1945, 80, points to the fact that the Dravidian short o is normally replaced in Sanskrit loanwords by short a. The same holds good for Proto-Munda words. We may therefore compare S. homba, hombe, ombe, M. omba "to low (cows, bullocks)". In the Kherwari dialects of Munda we often find variants with, and without, initial h. This is mostly due to a dialectal loss of h, although for some instances the possibility of secondary aspiration of the initial vowel is not excluded 174). In any case the loss of h must date back to a comparatively early period since some Sanskrit loanwords represent Proto-Munda words without ancient h 175), as āvila- "turbid" (Mhbh., Rām., Susr., Kālid., etc.), cf. S. hevel bekel < kevel bekel "turbid, muddy", huvel bukel "reddish (colour of stagnant, iron-oxidized water)" (but heola "to stir up, mix by stirring", heola hivli "to mix up, make muddy, turbid" are rather connected with heoda, id., heundel, hendel bekel, id.) 176).

70. hala-, m. "plough".

Since Mhbh., Rām. (hāla-, Med., hali- Trikāṇḍaśeṣa); also used as a weapon (like lāṅgala-, kalāṅgala-, etc.). It has been connected with Arm. jlem "I plough". Old Engl. gielm "sheaf" (Hübschmann, Uhlenbeck, Niedermann) or with Arm. jol "pole, stick", Lith. žúolis "trunk of a tree" (Scheftelowitz, Petersson), see Walde-Pokorny I, 629 (add Scheftelowitz, KZ. 53. 268) and Feist, Etym. Wörterb. der got. Sprache s.v. gilba. Walde-Pokorny emphasize the problematical character of these explanations, none of which is quite convincing (cf. J. Bloch, BSOS. 8, 411). It may therefore be useful to draw attention to a possible Proto-Munda derivation.

Skr. $l\bar{a}\dot{n}gala$ -, n. "plough" is a derivative from a root kal- or gal-, cf. Khasi $ly\dot{n}kor < {}^*l\check{e}\dot{n}kol$, id. 177). The Sanskrit word accordingly represents a Proto-Munda ${}^*l\bar{a}$ - $\dot{n}al$ (cf. la- $ku\dot{t}a$ -) or rather ${}^*n\bar{a}$ - $\dot{n}al$ (cf. Pa. $na\dot{n}gala$ -, Mar. $n\tilde{a}gar$, etc.) 178). The Dravidian words (Tam. $n\tilde{a}n\ddot{c}il$, Tel. $n\tilde{a}gal$. Kann. $n\tilde{e}gal$, Gondi $n\tilde{a}\dot{n}g\tilde{e}l$, Kui $n\tilde{a}\dot{n}geli$), some of which presuppose an original ${}^*n\bar{a}$ - $\dot{n}il$ or ${}^*n\bar{a}\dot{n}\tilde{e}l$, cannot have been borrowed from Sanskrit (as J. Bloch, l.c., apparently assumes) but must reflect a Proto-Munda variant

¹⁷⁴⁾ For a similar phenomenon in Tulu see Ramaswami Aiyar, Ind. Ant. 69 (1930), 200. Kann. *ambā*, Tel. *ambhā* are loanwords. either from Munda or from Aryan (Kittel, Kann. Engl. Dict., Preface XLIII derived *hambā* from Dravidian).

¹⁷⁵⁾ Skr. lex. ajjhala- : kajjala- is late, Skr. alābu- : Pkt. kalavū- not quite certain.

¹⁷⁶⁾ With bekei may be connected Pkt bahala-, n. "mud" (pankah).

¹⁷⁷⁾ See Przyluski, BSL. 24, 118—124 — Pre-Aryan and Pre-Dravidian & ff. (cf. Kuiper, Acta Orient. 16, 307 f.). Przyluski writes *ka-lynkor*, but *ka* is probably the Khasi "article". Final *-l* becomes *-r* in Khasi.

¹⁷⁸⁾ Cf. Skr anganā- "woman, female" < *a-nana = Kon-tu akan, Bahnar akan, Khmer kan (Kuiper, Acta Or. 16, 203 ff.).

of * $n\bar{a}$ - $n\dot{a}l$ ¹⁷⁹). The modern Munda equivalents are: S. $nah\varrho l$ "plough", M. $n\bar{a}el$ (Bhaduri), naial (Hoffmann), $na\ddot{i}al$ (Rakhal Das Haldar) "wooden frame of the plough", Ho nail "plough". Bloch regards these, too, as Aryan loanwords, probably because Przyluski's paper suggests the idea that $l\bar{a}ngala$ - has been borrowed from some Austro-Asiatic language outside of India. Since however the h in Kherwari (and, to a lesser extent, in Kurku and the other branches of Munda) very often stands for k, modern Kherwari represents the unnasalized variant of * $n\bar{a}$ - $n\bar{e}l$, viz. * $n\bar{a}$ - $k\bar{e}l$. It is possible that Skr. hala- is the same root-word without the prefix. Although there are no morphological indications of a foreign origin, its relatively late occurrence perhaps argues in favour of this explanation ¹⁸⁰).

¹⁷⁹) Burrow, BSOAS. 11, 615, derives the Skr. word from Dravidian.

Note $L\bar{a}hala$ - "S'abaraviśeṣaḥ" (Hemacandra, Vararuci), the name of an aboriginal tribe. Since $L\bar{a}ngala$ - is also the name of a tribe, $L\bar{a}hala$ - may be the prefixed form of hala- (= S. nahel). If so, the tribe may possibly have adopted the name of its santak or emblem. But the occurrence of such other names as Lahada-, Lahara-, and $D\bar{a}hala$ -warns us against rash conclusions.

APPENDIX.

Excursus on the Proto-Munda change of cerebrals to y, palatals and sibilants.

§ 1. While most of the phonetic changes enumerated in the introductory remarks of the present study were already known from variants occurring in NIA. languages (although their source had not yet been ascertained) 1), the assibilation of cerebrals has hardly been noticed 2). Since this development will possibly meet with some disbelief, a more detailed discussion of this phenomenon may perhaps be of some use. In illustration of the Proto-Munda facts attention may be drawn to a parallel development in Dravidian. Any attempt to explain the details of the striking parallelism which can be observed between the Proto-Dravidian and the Proto-Munda phonetic development would be premature, although the facts suggest the idea that the tendency towards a convergent development which ultimately resulted in the growth of an Indian linguistic league must date back to a very early (partly pre-Vedic) period 3). If the Proto-Munda change d > y, j would turn out to be an inheritance from the Austro-Asiatic stage (see below, § 4), the parallel Dravidian development might possibly be due to Proto-Munda influence.

In explanation of this phenomenon it should firstly be pointed out that Tamil has a fricative sound l, whose phonetic value may approximately be denoted by the symbol \check{z} . In the modern pronunciation of Tamil this sound is partly weakened to y (particularly in the region of Madras), whereas in the South it has coincided with the phoneme l. This development is not, however, restricted to modern dialects of Tamil. Many doublets in the common language show it to date back to an early period of the language. Thus K. V. Subbaya, A Primer of Dravidian Phonology 31, quotes in illustration of the Tamil change l > y: $m\bar{a}lku > m\bar{a}y$ "to die". Now $m\bar{a}y$ - occurs as early as the Kural, and a variant $m\bar{a}l$ -, id. is attested in the Tiruvācakam (9th century?). The last word, however, need not have developed from * $m\bar{a}l$ -. It is a methodical error, in my opinion, to assign to the prim. Dravidian language distinct phonemes l, l, etc., as most authorities do (e.g. Subbaya, p. 30 ff.) 4). As a matter of fact, this is obviously based on the erroneous supposition that Tamil reflects the

¹⁾ See Turner, Introduction to his Nepali Dictionary, p. XV.

²⁾ For the scarce remarks known to me, see below, p. 156. These explanations of the phenomenon are in my opinion incorrect.

³⁾ Cf. also Burrow, BSOAS. 11, 597.

⁴⁾ If these phonemes existed in the parent language at all, their modern distribution (e.g. in Tamil) does not correspond to the original state of things.

original state of things so that divergencies in other Drav. languages should be explained as secondary developments. In reality, however, we have rather to do with a single phoneme, which may be represented in various ways (viz. as d, l, l, r, r, y) in one and the same language: no more than the Munda languages, indeed, do the Dravidian forms of speech represent a pure, homogeneous dialect (owing, no doubt, to the particular geographical and social conditions prevailing in India). The following are a few examples of this interchange, mainly taken from Tamil: micai "elevated place, eminence": mēţu, id., miţai, mēţai "platform". coli- "to strip off, peel off": toli- "to strip off, husk". — cor-, culal-(cunai-, cunanku-) "to droop, faint, languish" : toy, id. (toyyal "fainting"), tolai- "to be exhausted, defeated, perish", tuñcu- "to droop, perish", tulanku- "to droop". — cuvvu- "to eat enjoy": tuvvu-, id. cori "to rain" (cori, conai "rain") : tuļi "rain(ing)", tuyaram, id. — — Kann. jubara: Tam. tuvar "astringency" (Skr. tuvara-). — Tam. cunni, Tel. culli: Kann. tunne "penis". — [As has been observed in the Introduction this interchange must be the result of a free variation within the limits of a phoneme, cf. Kann. tūtu, tūntu "hole" ~ tore, tole, toli, id. ~ lotta, "a hollow, pit" (Tel. loddi, loya, id., lotta "hollow"), lotte "emptiness, hollowness" ~ jaḷḷu, id. ~ Tam. coṭṭai "cavity" (lex. cūci "hole", cf. Pkt. jhusira-, Skr. śusira-, susirá- "full of holes", Pischel § 211). - Kann. tudi, Tam. tonți "stolen article" ~ Kann. dōcu "to rob, plunder" ~ Tam. cottu- "to steal". Several of these word-groups may be of Proto-Munda origin (for the first instance cf. p. 134 with p. 131, for the second cf. p. 135 with Add.) but the numerous Dravidian variants have hardly been borrowed as such. I now regard the cerebrals and the dentals as (originally "extra-phonematic") variants of the same (alveolar?) phoneme, other variants of which were j, c, s, r, r, l, l, l, etc.]

§ 2. It has been pointed out above that the change l > c dates back to at least the middle of first millennium A.D. (Kural). Vedic loanwords however show the same phenomenon some thousand years earlier. For the Yajurvedic word kaváṣ- "gaping, opening wide (of doors, thighs)" is no doubt related to Tam. kavaţu "branch of a tree, forked branch, fork of the legs" (cf. Tel. kavața), kavuțți "space between the thighs", kavar-"to branch off, to fork, bifurcated", kavar "bifurcated branch (of trees, river)", etc. The nom. plur. is partly written kavásah (Maitr. S., Vaj. S.). partly kaváyah (Kāth. S., also in some mss. of Taitt. S.), which, rather than being graphic (thus Vedic Variants II § 877), reflects the double development of Drav. 1. It may be added that Skr. kapāṭa- is not the older form of kavāṭa- "door, doorpannel" (thus Wackernagel, Altind. Gramm. I, XLVIII) but a Sanskritized variant of it; and the IE. etymological explanations proposed for Skr. gavinikā-, gavīni- "the groins" (cf. e.g. Charpentier, KZ. 46, 44 ff.) are very dubious on account of Telugu gavani, gavini, gavidi "city-gate". Another instance of Skr. s representing

Drav. l is kalusa- "muddy, turbid" (since Mhbh.): Tam. kalul- "to become turbid", kalul "muddiness" (cf. kalanku- "to be stirred up. confused", etc.). But Skr. lex. māṣa- "blockhead": malvá- "foolish", though it may be compared to Tam. mattai "stupid fellow", mataiyan "blockhead", mațan "ignorant person", manțu "fool", mannai, id., is rather of Proto-Munda origin (see s.v. baṇḍá-, p. 102, 104). In initial position we often find c for s: thus Skr. cuntī- (lex. cuntã-, cundhī-), cundya-, cūrī-(lex. cūdā-, cūdaka-, cūtaka-) "a well", lex. śusi-, f. "hole, pit", Hi. coyā, etc. may be connected with Tam. tol-, tol-, tolai-, totu-, tontu-, turuvu-"to bore, dig, excavate, scoop out", tulai, tolai, tollai, tolku, tonti, tun, tulanai "hole, pit", totti "water-trough, tub, cistern, reservoir", cottai "excavation, cavity", curai "hollowness, cavity", cunral "scooping out". S. sund, sut', M. Ho. sud, id. must then be Drav. loanwords 5). The question arises whether Hi. jurnā "to be joined" (Skr. lex. jutati, judati "binds", see Turner s.vv. jurnu, jutnu) may be related to Skr. dora-, m.n., doraka-, n., dora- (Yaśastil.), doraka-, n. "string" (Turner s.vv. doro, dori, dor), all being derived from Drav. *dud, cf. Tam. totu, totar-, totakku-, torru-, tuṇṇu-, tōy- "to join, attach, etc.", tōṭu "collection, assemblage", tuṇai "partner, companion, pair, couple", cūṭu "bundle of leaves" (cf. Hi. $j\bar{u}_{\bar{i}}\bar{i}$ "a bundle of sugar-cane", $jo_{\bar{i}}\bar{i}$ "partner, consort, pair, couple", etc.). Skr. Pkt. dora- is usually connected with Skr. Pkt. davara-, m. "thread" 6) (root war-, wa-da, see s.v. kabarī-), but cf. Skr. dondā- in schol. on Hāla 1747) : dundubhasabdo dondāyām vartate, donda (sic) mālāvišeso loke prasiddha eva.

§ 3. The interchange of dentals (cerebrals) and sibilants in Dravidian is a much disputed problem. Pope assumed s > t for Toda; on the other hand, cf. Caldwell, Comp. Gramm. 2nd ed. (1875) 52: Tam. t, d > c(peritu > pericu); similarly Subbaya, op. c. (1909), p. 25 (cf. p. 30: Gondi d > j, $n\bar{a}du > n\bar{a}ju$; pp. 31, 33 f.: l > y, r > y, e.g. Tam. puluti "dust" : Tulu poye, Tam. kuļi "pit": Tel. goyya, Tam. kīru "to scratch": Tel. $g\bar{\imath}ya$). At the same time, however, he assumes s > t (p. 40: Tulu sappu, tappu "mistake", also Tam. vācal "door" > Mal. vādil). Ramaswami Aiyar, who at first refused to accept t, d > c (Educational Review, Madras, Jan. 1932, p. 3 off-print), later admitted the correspondence Kann. s: Tam. c, t, d (e.g. Kann. sī: Tam. tī "sweet", Kann. esal: Tam. ital "petal"; (see Educ. Rev., Febr. 1939, p. 1 f., March 1939, p. 2.) Similarly Tuttle, Dravidian Developments 10. Bloch, Structure grammaticale des langues dravidiennes (1946) accepts t, d > s for some cases (pp. 48, 53 ff., cf. p. 69 on Gondi $-s\bar{\imath}$, $-j\bar{\imath}$, in accordance with Caldwell 397). Burrow however takes the opposite view: he regards the sibilants (palatals) as original sounds, which have partly become South-Drav. r through rhota-

⁵⁾ Otherwise Kittel, Kann. Engl. Dict., Preface XXVI.

⁶⁾ Since Zachariae, Gött. Gel. Anz. 1898, 472. Lidén's connexion of dora- with O.N. tiódr (Studien 42) is obviously incorrect. (Cf. Wackernagel, IF Anz. 12, 21).

⁷⁾ See Pet. Dict. V, 1457.

cism (Kui $\bar{a}j\bar{a}$ "to become cool", $\bar{a}spa$ "to make cold" > Tam. Mal. Kann. Tel. $\bar{a}\underline{r}u$ "to grow cool", BSOAS. 11, 346), and partly yield t in South Dravidian (e.g. Transactions Philol. Soc. 1945, 118) s). On the other hand the comparison with Samoyede words leads him to assume original affricates (t) ts and nts/ndz, which have become tt and nt/nd respectively (pp. 342, 344). The assumption of a variation $d \sim l \sim j$, y renders these theories superfluous s).

It should be added that this theory may also shed a new light on the problem of the relations between Drav. c(s) and y (see Ramaswami Aiyar, Journ. Orient. Res. 6, 1932, 11—21, and cf. Mervart, Grammatika tamil'skogo razgovornogo jazyka 48). Thus Kann. pesar and Tam. peyar "name" may be derived from *pisar \sim *pitar: palatalization through preceding i (Tuttle, Drav. Developments 14, 18) cannot explain the majority of the instances. Similarly perhaps Tam. vay-iru (vay-iru), Kann. bas-ir, bas-ur, Tulu bañji "belly" from *vad-/*vand- (cf. Kui bandi? But see Add. to p. 145).

§ 4. A similar phonetic development has taken place in Proto-Munda. We are however hardly justified in ascribing to Proto-Munda the phoneme l of Tamil since any indication of its former existence in Munda is wanting. On the other hand, the cerebral r, which must at one time have been common to all Proto-Munda dialects, might as well account for the change of the cerebral sound to y, j, c, s, as similar developments of r are rather frequent. Dravidian examples have been quoted above, although Subbaya's explanation is not beyond doubt. Jespersen, Language 244, mentions some instances, belonging to women's speech, from French (chaire > chaise), Norwegian, and Chukchi. As an additional example we may refer to Mingrelian, where, e.g., p'ira "ready" (> *p'ija) has become p'iča, see A. Dirr, Einführung in die kaukasischen Sprachen 90 10). In assuming a change of r to j, etc., we stand on a firm ground since r has been inherited from Austro-Asiatic, cf. S. haram, M. Bh. hārām : Khasi rim, Mon tarēm "old"; S. hoṛ, M. hoṛo (K. kōrō) "man" : Khasi b-rīu "human being"; S. horo "unhusked rice" (So. sárō- "paddy") : Khasi soh-rīu, Mon srō, Khmer srāuv, sróv [srūw], Sakai cāroi.

The inference to be drawn from these examples, viz. that Mon-Khmer

⁸⁾ Thus he derives Tam. pittai "a tuff or bundle of hair" from *piccai (BSOAS. 11, 348) although Tam. pīli "peacock's feather" points rather to an original *pīd- (> Skr. piccha-, n. "peacock's tail"). Cf. also op. c., p. 338 f.

⁹) Cf. Emeneau's recent discussion of the development of l to a voiceless alveolar sibilant (s) in Toda (Univ. in California Publ. in Class. Philol.. vol. 12, 1943, p. 259, n. 27). This s is a different phoneme from the post-dental sibilant.

¹⁰) Cf. also Semang yumpút "grass" for Malay rumput, and yūpa "silver" for rūpa in many Himalayan dialects of the Tibeto-Burmese family (Linguistic Survey of India, III, 1, passim).

and Khasi must at one time have had two different phonemes (r and r)raises a number of questions which cannot be sufficiently answered as yet. Thus we may hazard the suggestion that r is identical with the uvular rsound which is ascribed to primitive Indonesian. But for a comprehensive examination of the problem of the existence of cerebrals in the whole field of Austric languages the time has not yet come 11). It is not improbable that several of the developments of d, t, which we here ascribe to Proto-Munda, will later turn out to date back to a far earlier period (which would account to some extent for the very intricate character of the phonetical correspondences, which are not sufficiently explained by the assumption of dialectal variations in Munda alone). Some interesting facts, at any rate, suggest the idea that Mon-Khmer $r \ (< r)$ may alternate with $t \ (< t)$, cf. Mon tēp "to wink": pharèp, id., khrep "to twinkle, wink", kharip, pemrip "twinkle", themrep mot "twinkling of an eye", Khasi khap-rip "to twinkle, wink", Stieng rip "to shut the eyes" 11a). Munda has, by the side of S. rip ripi "to twitch" (M. ripi ripi "to wink"), ripit' "to wink with the eyes, to blink" (M. rāpid" "twinkling of an eye", Ho rāpid "to wink, blink"), variants with j, e.g. S. jipa "to blink, close the eyes", jipit' "to close one eye", japit' "to shut the eyes, sleep, die" (M. Ho K. Kh. jāpid "to shut the eyes") 11b). Hence the conclusion that an inherited r has become j in Proto-Munda may be tempting. But then, Santali has also lip lip "to tremble, quiver, twinkle", which suggests that either the changes d > r, l, j are specific developments of Munda alone, or rather, that all these variants have been inherited from an earlier (Austro-Asiatic or Austric) stage of the language. (Cf. Semang, Malay kělip "to wink", Mal. kějap "a wink"?). Although I am not qualified to decide this question, attention may be drawn to such cases as S. run run "clear and transparent", runun runun "transparent, clear", tun tun, id. (Central Sakai renlen "clear, limpid"?): Mon leyung "to be clear or bright", sung "to be clear, limpid, serene, calm"; or So. jěru-, Central Sakai jěrö, Bahnar jöru, Stieng jöruh, Mon jeröh "deep": Mon soh "to be deep, a chasm, a gulf", süh, myüh "to be deep", temyüh "deep", lemyüh, leyüh, peyüh "depth" 12). It must be left to specialists to decide whether such traces of the changes d > l, i, y do exist in Mon-Khmer (and Indonesian). We shall here confine ourselves to the quotation of some Munda examples.

§ 5. d > y: S. thoyo "hollowed, empty; to eat (worms)", dhoya, dhoyo "to eat (worms)", thuiak" "an empty cocoon", thoerak" "to hollow

¹¹) Schmidt leaves this problem unsolved for Mon-Khmer (see e.g. Mon-Khmer-Völker 92, Grundz. Lautl. Khasi-Spr. 739).

Another instance of r < d is Khasi shin-tur "mouth": Semang tě-nud, So. t'ōd-, Pareng tōt, etc. (see below s.v. śuṇḍā-).

¹¹b) Cf. Nep. jhimjhimāunu "to wink", jhimko "a wink", cim "closing the eyes, blink" (noun), cimcim "blinking", Hi. jhapkī "a wink, blink, twinkle".

See also below, p. 135, on the nasalization of j, c, s < d, t.

d, t > c, s: mucur mucur, musur musur : mutur mutur "to crunch". — bisic' suțic' = bițic' suțic' "diligently". — gusiau "to keep oneself away", gandac' gusuc' : gandac' gunduc' "one who keeps himself away from company", gạṇḍia "close, reserved" (ga-da). — lese pese : lete pete "muddy" (but for Hi. lhes, les "stickiness, paste", etc., see Turner s.v. liso).

Initial j: jhala jhula "to trim, to reduce in seize" : dhalac' dhuluc' "short" $(d\alpha - d\alpha$ "stunted, short", see below s.v. suntha). — ihanka ihak' "to become awry, askew": dhakṛa dhokṛe "twisted, awry, askew" (da-ga, cf. Skr. lex. tagara- "squinting", Hemac. Med.) 13). — jhinkor jhonkor. jhingor jhongor : dhinko dhoron, deket' "loose, slack", toke "loosely inserted" (da-ga). — jhilon jholon : dhilon dholon "loose, slack". — jhakejhaki "to pull or shove one another": dhaka dhaki "to push one another" (cf. Hi. jhok "a shove or push, shock, collision", jhokā "blow, collision". jhakolnā "to shake" : dhakkā "shove, push, knock, jostle", ḍhūkā "a tap, touch, nudge", takkar "collision", dhakelnā, dial. dhakalnā "to shove, push, jostle"). — jhadga, jhedge : dhadra, dhedre "worn-out, torn, etc.". jarac' juruc', jargac' jurguc' : darac' duruc', dargac' durguc' "small (children)". Root da-da (see śunthá-, dandá-). — S. jola : dola "marshy" (see below s.v. jala-). — Ho jobe: dobe "mud" (see s.v. jambāla-). j(h)ipir, sipir sipir: tipic' tipic' "drizzling" (see s.v. timita-). — jhargoc': dhargoc' "in disrepair" (da-da, see above jhadga). — M. jhāmpā jhompo: dhāmpā dhompo "cluster of fruits" (da-ba "cluster", cf. Hi. jhūpā "collection, heap, pile" etc.). — M. junkā "hanging": S. tonkor, tankur, tikor tokor "to hang, dangle", Ho tolgoe "to hang" (cf. Hi. jhuknā "to hang down": $t\bar{a}gn\bar{a}$ "to hang up", Beng. $t\bar{a}n(g)\bar{a}$ "hanging", Nep. $t\bar{a}nnu$, etc.). Tam. tūnku-, tonku-, Kann. tongu- "to hang" are prob. Munda lws.

Initial c, s: cenda : țenda "not quite full-grown" (da-da, see below śunțhá-). — conga : țhonga "pipe, tube" (cf. Hi. cõgā, etc., see Turner

¹³⁾ As for Beng. terā "squint-eyed" (Chatterji 490) see below. p. 156.

s.v. $c\tilde{u}go$ and cf. $dhu\dot{n}ro$ "tube, funnel", Bashkarik $do\dot{n}$ "hole"). — ramcam "standing out", M. $romb\bar{a}$ comb \bar{a} "many-branched" (both from da-wa "bifurcated, wide apart"). — semec' "small": temel, id., temec' "shallow" (da-wa "low, flat", cf. deble, Ho tembe "shallow", Nep. thepco "lowered, flattened", etc. see cipita-). — sio soyo "trickling down": dhio dhoyo, tio toyo "leaking". — sipi sirin': tipi tipi, tipin' "tinkling". — The circumstance that the nasalized form of j, c, s (< d) is n', just as is the case with ancient palatals, suggests a pre-Munda origin of the assibilated cerebrals; e.g. S. $n'\tilde{o}h\tilde{o}t'$ "to graze, barely touch": cohot', tohot' "to touch with one's foot in passing" (cf. K. tokot' "to stumble against").

Many Aryan words are to be explained in this way. Thus Skr. jhijjī-, jhinjhī- "cricket", by the side of jhālā-, jhallīkā. jhilli-, jhillarī-. jhillikā-, jhiri-, jhirikā-, jhīrukā-, (Pkt. jhāruā-), cillī-, cīl(l)ikā-, cillakā-, cīrī-, cīrikā-, cīrukā- (and cañcalī-?), point to an original *jiḍi or *ḍiḍi. Cf. M. tete "cricket" (Rakhal Das Haldar), Pkt. teḍḍa-, Hi. tiddā "grasshopper", tiddī, tīdī, tīrī "locust", Kann. jitti, citte "id., grasshopper". — Skr. ciñcā- "tamarind" has many variants, e.g. ciñcinī-, caṇḍa-, tintida-, tintidī-, tintidikā-, tintidīkā-, tintilī-, tintilīkā-, and, with a Proto-Munda prefix, sutintida-, sutintida-. Cf. also Skr. lex. cuñcura-, cuñculi-"a play with tamarind seeds". Pali has tintinī-, tintiḍikā-, tintiḷikā-; cf. Old Beng. tentulī, mod. Beng. tētul, etc. See Wackernagel, Altind. Gramm. I, 222, Geiger, Pali 60, Chatterji 483. The radical element is tid (tind-, tin-), cf. Telugu cinta with only the first cerebral assibilated (as in Skr. caṇḍa-). Modern Munda has also reduplicated forms, cf. Kh. tenton, So. tittin-. (In "A Manual of the Sora Language" Ramamurti writes tīttin-ĕn, p. 72, or tittin-en, p. 77, whereas both dictionaries give tittī-n, as though the word were $titt\bar{\imath}$. There can be little doubt as to the correctness of the former form). - Skr. dayana- = dallaka- "hammock for carrying objects in" stands for *dada-, cf. S. dhaluc' dhaluc' "with an up and down motion", etc., and cf. dolā-, dolikā- "swing, cradle", jholikā- "cradle (?)" (see Schmidt, Nachträge s.v.), Nep. jholungo "a swinging cradle". — Skr. ni-miṣ- "to close the eyes", Pkt. miñcana- "closing of the eyes", Hi. mīcnā "to close": Panj. mīṭnā, Mar. miṭṇē, id., Skr. mīl- (since RS.; with Proto-Munda *l* which explains the absence of *l* in Aryan, see Lüders, Philol. Indica 551). The original meaning is prob." (to press) close together" (see Turner s.v. micnu "to press, squeeze, crowd"). — Skr. lex. lūṣati, loṣa(ya)ti "steals": luntayati, lunda(ya)ti, runthati, rundati, id. Root lud- or dud-, cf. S. locra, locro, locan lucin, lacan locan "pilfering, thievish", lura chunta "snatching away, to grab away", lusra lusri, lucra lucri "prone to steal" (luca = Hi. lucca "thievish"). A variant of locra is S. cocra, which however seems to be derived from S. cor = Skr. cora- "thief". As for the last word, the details are far from clear. Cora- stands for *cora- < *coda-(cf. Hi. cottā, Nep. cotto), which cannot be separated from Tamil col-,

cor-. coțțu-, curru- "to steal, grasp, etc.", curai "robbery" 14). On the other hand, Tam. totuvu "theft" and tonti "stolen article" (Kann. tudi, id.) and prob. Nep. thut-that "thieving, pilfering" also point to a root dud (either Drav. or Munda). — Skr. lex. laśa-, m. "gum" (see Turner s.v. lassā), S. lasak' pasak' "sticky", loc phocao "gummy, viscous": laṭak', jaṭak', laṭkao,leṭkom, jeṭkom "to adhere, stick to", leḍ "miry pool", jeṛ jeṛ "sticky, viscid". As for Nep. laspas "contagion", cf. S. las pas, lat pat "sticky, muddy". — Skr. lex. jhumbarī- "a kind of lute": tumbī-vīnā-, id., tumba- "gourd". — Skr. śākinī-, f. "witch": ḍākinī-, id. (derivation unknown). — Skr. śāka-, n. "eatable herbs": Pa. ḍāka-, id. (same remark). - Skr. cáṇḍa- "fierce, violent", which Turner, BSOS. 5, 129, Nep. Dict. s.v. caro, derives from *candra- on account of Si. candro "passionate", cannot be separated from Nep. janda, jando "hot-tempered, fierce" (cf. Hi. jhalla?). We may accordingly compare S. coenda "hot-tempered, irascible, hasty, passionate", cortha, corcota, etc. "passionate, badtempered": S. thenta, id. — Skr. śāva-, m. "young of an animal", Pkt chāva-, Pa. chāpa-, id. : S. debe "dwarfish, small", tembe tura "small (animals, children)", etc. Root da-wa "stunted, small" (see s.v. tūpará-). — Skr. tu-ṣāra-, m. "frost, rime": ṭhāra-, id. (Kāty. S'S.) 15). Root da-da, cf. Skr. jada- "cold, cool", S. jadwahi, jadwas "feeling very cold": Hi. ṭhaṇḍhā "cold". — Skr. śambala- (sambala-, samvala-), n. "provisions for a journey" survives in Nep. sāmal-tumul, id., an echo-word whose last member is connected with Nep. tumari "pack, baggage". Since the last word may be related to S. thamae thukai "baggage, impediments", the question arises, whether the two members of sāmal-tumul are variants of one and the same word (as is often the case in Munda). Cf. S. sambar, somol, sombol "to provide oneself with, supply, prepare", and perhaps samtao "to collect, assemble", samta sumți "taking all along, bag and baggage". Root ta-ba or da-ba? — Pa. kirāsa- : Skr. kirāta- (see Kern, Toevoegselen s.v.).

§ 7. Some Sanskrit words require a more detailed treatment. K h a d g á-, m. "rhinoceros" occurs since Maitr. S., Vāj. S. and is in common use in the Class. language (Rām., Caraka, Raghuv., Daśak. 94, 18, etc.). Since Suśruta there occur variants which show that this word had come to be

¹⁴⁾ Cf. also the Santali echo-word lura chunta!

¹⁵⁾ Cf. Nep, jāro "coldness, chill, winter" (< Skr. jādya-). Hindi has, beside thār "snow, frost": thir "extreme cold", thiṭar, thiṭhar, thiṭhar, thiṭhur "numbedness, torpor, chilliness, cold, frost", thiṭrā, ṭhiṭharā, thiṭhurā "benumbed, torpid, chilled, impotent". Is Skr. śiśira-, m.n. "the cool season, hoar, frost, dew; adj. cool, chilly" (since Ath. S., Kāṭh. S.) the assibilated variant of Hi. ṭhiṭhir, just as -ṣāra- is of ṭhāra-? The usual connexion with Old Icel. héla "frost rime" (< *ke-kl-on-) presents some difficulties since the assimilation of the vowel of the reduplicated syllable to ir, ur of the root syllable is comparatively young (Ved. tistiré: tastiré, titiruḥ: tatāra) and does not occur, so far as I see, in nominal stems (cf. pāpuri-, tāturi-). An original *śi-śira- or *śā-śira- is accordingly excluded by the principles of Sanskrit word-formation.

identified with its homonym khadga- "sword", viz. khadgāhva- (lit. whose name is "sword"), khadgin- (Suśr., Kādambarī). In Tel. khadgamṛgamu "rhinoceros" the last word may have been added in explanation of the first, somewhat like the instances mentioned by Wackernagel, Altind. Gramm. II, 1, 251 (cf. also gaṇḍamṛgamu, id.). Although Wackernagel, op. c. I, 177, suggested a foreign origin, other scholars hold it to be identical with khadgá- "sword". Cf. Uhlenbeck, who starts from the meaning "horn of the rhinoceros" (lex., prob. deduced from khadgin-), and Lüders, Festschr. Kuhn 314 (= Philologia Indica 429), who holds khadga- to be a shortened form of *khadgaviṣāṇa- (cf. Ved. sūcīka- for sūcīmukha-). Although any evidence of the supposed older form is wanting, Lüders maintained his view against different explanations in an article written shortly before his death (see ZDMG. 96, 1942, 81, where khadgā- is quoted as a parallel of śiśuka-, Pa. susuka-, a shortening of śiśumāra-).

A new light was shed on this side of the problem by an article of E. Benveniste in "Donum natalicium — Schrijnen", p. 371 ff. He draws attention to the name καρτάζωνος occurring in Aelian. wherefore he proposes to read*καργάζωνος on account of New Persian kargadān. The same word occurs in Semītic, cf. [Accadian kurkizānu], Arabic karkaddan. From these forms he infers a 'Pre-Aryan' word with the consonants *khkzn/*khgdn, from which he also derives Skr. khaḍgá-. Since kar- is a very common prefix in Proto-Munda, we are thus led to consider the question whether the origin of this 'Pre-Aryan' word may be in Proto-Munda, its radical element being kaḍ-, gaḍ-. If so. kaḍ- is due to (dialectal) unvoicing, and khaḍgá- contains the same guttural suffix as khaḍga-, "sword", and phalgú- "small", phalgú- "reddish", which are other Proto-Munda words of the Vedic language. As a matter of fact, suffixation had become a common feature of Proto-Munda word-formation as early as the Yajurvedic period.

The existence of a Proto-Munda radical element gad- (ga-da) is proved by another Sanskrit word for rhinoceros, viz. ganda-, m. (Haravijaya, S'ukasaptati), gandak-, m. (Kādambarī, Yaśastil., Deśīn. 7, 89 comm.), gandanga-, m. (lex.). The last word is obviously due to popular etymology, ganda- having been taken in the sense of boil. (As for gandakamṛga-, Deśīn. 7, 57 comm., Tel. gandamṛgamu, Tam. kantamirukam, see above). The correctness of this etymology was advocated by Lüders, ZDMG. 96, 1942, 56, n. 3, who held the proper meaning to be "der mit Beulen versehene". But Khasi kynda "rhinoceros", which represents Austro-Asiatic *gěnda furnishes conclusive proof of the Austro-Asiatic origin of ganda-. P. C. Bagchi's connexion of Skr. ganda- (?) with Sakai-Semang gantir, gental, sogantel "elephant" elephant is accordingly to be rejected. As for the NIA. forms of the word, Hi. elephan elephan

¹⁶⁾ See Pre-Aryan and Pre-Dravidian in India, Introd. p. XXVI.

of Sanskrit, which too, is an indication of Proto-Munda origin. Cf. Mar. maind, maid "lazy, stupid": Skr. manda- (Bloch 75; see p. 102, n. 145).

While ga-nda- represents a "prenasalized" form of the root ga-da, the nasalized variant ga-na occurs in ganotsāha-, m. "rhinoceros" (Trikāṇḍa-śeṣa). As it cannot possibly be a compound of the Sanskrit words gana-and utsāha-, we may suppose that it is a Sanskritization of *gaṇochāha-(cf. Skr. utsuka- for *ucchuka-, from icchā-, Wackernagel-Debrunner, KZ. 67, 1942, 155 f.). This form contains the wellknown Proto-Munda suffix -(a)ha (cf. kalaha-, laḍaha-, maṭaha-) and the derivative element -oca-, -osa- (cf. S. laloc, khakosia, lerosia, etc. and see p.118 on lālasa-)17).

The question remains to be answered how the Iranian and Semitic forms of this word are to be accounted for. As has been pointed above, they contain a Proto-Munda prefix kar- and a suffixal element -n, which may also be of Proto-Munda origin. The interchange of k and g further shows that they represent two different dialectal forms. To the same conclusion points the difference between Old Iranian kargazan, [Accad. kurkizanu] (with z) and mod. Persian kargadan (with d), which cannot of course be paralleled with the wellknown cases where Avestan z and Old Persian d represent IE. g, g. Since d points to a fricative having been pronounced instead of d, we must assume that two different Proto-Munda forms of this word have become known outside of India, viz. karg/kazan or karg/kazan and kargadan, which were prefixed variants of argana, argana, and argana and argana. In view of Hi. argana "elephant": argana "rhinoceros" (cf. Bělandas of Kuala Langat argana" "elephant": Sakai argana" "rhinoceros") Skr. argana, arg

§ 8. By the side of the ancient words for "water", viz. āp-, f., udán-(udaká-), n., vāri-, n., and salilá-, n., the epics introduce a new word jala-, n. Other new words, viz. toya-, n., nīra-, n., and perhaps ambu-, n., have already been explained as Dravidian loanwords, see Bloch, BSOS. 5, 739. The correctness of the IE. derivations proposed for jala- (which is usually connected with galati "drips", see Uhlenbeck, Walde-Pokorny I, 690; otherwise Wackernagel, Altind. Gramm. I, 219: Lat. gelu), seems therefore doubtful. As a matter of fact, most authorities admit this possibility with some diffidence ("wahrscheinlich" Uhlenbeck, "vielleicht" W.-P.). Hence it seems justifiable to draw attention to a different possible explanation.

Beside S. dalhi, dalahi, dal dalahi "marsh, bog, marshy, boggy", dalha, dolha, dola, dol dol, dol doli(a) "marshy, boggy" (M. dal dal, "marsh, swampy ground"), thal thal "deep mud", thala "marsh, marshy" there occur variants with j, cf. S. jola "a very shallow lake, a sheet of water" and, with r for l, jarhi "a swamp; wet, humid, moist, marshy, swampy" (= dalhi), M. darha "a pool or deep place in a river"(?). — Many NIA.

¹⁷⁾ Skr. ghantika-, m. "allıgator" is not clear.

words are obviously derived from these Munda words, cf. Hi. (Mar. Nep.) daldal "marshy land, mire, mud, swamp", daldalā "marshy, boggy", Skr. talla-, m. "a small pond" (Yaśastil., S'rīk., cf. Vāmana 2, 1, 7: a grāmya word), Pkt. talla-, n., id. ("palvalam", Deśīn. 5, 19), Hi. Nep. tāl "pool, lake", Mar. tāl "mare de liquide répandu", Pj. tallā, tallah "low-lying land", Nep. thalthale "marshy land", jalātāl "a flood which forms a regular lake", jalthal "flood", Hi. jalthal, jalthal "ground half covered with water, marshy ground, a sheet of water" (where -thal is hardly identical with thal "dry, firm ground" < Skr. sthala-, id.), Hi. Bih. tarī "marshy, low-lying land where grass grows, moisture, humidity, water (in opposition to khuskī "dry land"), low land on the banks of a river, marsh, swamp", Nep. tari, id., Hi. Pj. tarāī "lands lying at the foot of a watershed or on the banks of a river, marsh, swamp", Nep. tarāi, id. 18), Hi. jalā, jallā "lake, tank, reservoir" (cf. Beng. jalā "marsh", perhaps also Skr. lex. jhallarī- "moisture", Pa. jalla- "moisture, perspiration", Pkt. chillara-, n. 'palvalam' Deśīn. 3, 28), jhīl "a pool, shallow lake, marsh, morass, swamp", jhād, jhādā, jhādā "pool, marshy land", etc.

The meanings of Hi. jalā "pond" and Beng. jalā "marsh" (which are usually derived from Skr. jala-, see Turner s.v. jala) deserve notice, although they can be due to secondary influence of such Munda words as S. jola. Hence, even if their derivation from jala- should be correct, they do not prove an original meaning "marsh" for the Sanskrit word, which, indeed, is used since the oldest texts (Epics) in the general sense of "water". On the other hand, Hi. tarī shows how a word for "marsh" may come to denote "water" in opposition to "dry land". In the pre-Epic period the Sanskrit rhyme-words jalam and sthalam may perhaps have developed their opposite meanings along the same line. Other Skr. words which may possibly belong to this word-family are kulāla- "water", taḍāga-, n. 'pond'' (cf. Hi. jhāḍā) 19), kāsāra-, m. "pond lake" (cf. perh. Pkt. kacchara-, m. "mud" Deśīn. 2, 2) and Nep. simsār "bog, morass" (Nep. sim "marsh, bog" belongs to the word-group discussed s.v. jambāla-) 20). Frisk's assumption of a suffix -ra- in kāsāra- (cf. Zur indoiran. und griech. Nominalbildung 41) is unfounded.

§ 9. Skr. lex. ja n gāla-, m. "dyke" (Jaṭādhara in S'abdakalpadr.), cf. Beng. jangāl (connexion with Nep. janār "ford" improbable). From ḍa-ka "to obstruct" (cf. rodha-, m. from rudh-); S. ḍhan "to cause to stick, obstruct", ṭangao "to stop, hinder, obstruct", jange "obstacle", So. dan, ran "to withhold, prevent, obstruct", S. ḍhēk, thek, ḍhēk ḍhōk, dhēk jhōk,

¹⁸⁾ Cf. Tulu tār "rivulet"?

¹⁹) A different explanation is now suggested by Burrow, Transactions Philol. Soc. 1945, 103 f. Neither of these derivations is quite convincing. Since $-\bar{a}ga$ - is not common as a suffix, the possibility of $ta+d\bar{a}ga$ - should also be taken into consideration.

²⁰) Skr. kedāra- "a field under water" may be a Dravidian loanword, see Burrow, BSOAS. 11, 124.

tek jhok, atok, roktok, etc. "impediment, obstacle, hindrance". Cf. also Pkt. tanka- m. "bank, shore" (tatam, Deśīn. 4, 14), Kann. cekkusu- "to stop, arrest, prevent", Nep. cheknu "to hinder", Hi. dhākar "hedge, fence", arangā "obstruction, obstacle, impediment" (with prefix a-) and see Turner s.v. arkanu (to be separated from arinu "to stop, halt", see above, s.v. argada-).

- § 10. The original meaning of $j\bar{a}$ \dot{n} g a l a-, adj. (Manu, Y \bar{a} j \bar{n} ., Su \dot{s} r., Var. BS.), $ja\dot{n}gala$ -, m. (also adj., P \bar{a} \dot{n} . Lex.) "arid (land), desert, sparsely grown with trees" seems to have been "a clearing in a forest", cf. perh. Pkt. $ja\dot{n}g\bar{a}$ "pasture land", (gocarabh \bar{u} mi \dot{n} , De \dot{s} $\bar{\imath}$ n. 3, 40), and S. jha \dot{n} ga \dot{s} ka \dot{t} a (jha \dot{n} gal ka \dot{t} a) "forest with clearings here and there, to cut openings in the forest". H. Petersson, Studien über die indogermanische Heteroklisie 258, 89, connected it with Lith. \check{z} \check{a} garas "dry branch", but the parallelism of the derivatives from Proto-Munda $d\alpha$ - $d\alpha$ (see s.v. dand \dot{a} -) points rather to Proto-Munda $d\alpha$ - $g\alpha$ "bare, stripped" (and "stunted, short", as in the roots discussed s.vv. kuntha-, \acute{s} untha-/dand \acute{a} and band \acute{a} -). Cf.:
- 1) "to cut off": S. tingrau "to cut off (top or branches)", Ho cangā "to pluck maizecobs" (cf. candel "bald").
- 2) "clearing in the forest", see above. (S. dangal "highland, dry", Beng. dānā, tenrā "highland", Hi. dongar, etc. rather belong to the same word-family as śikhā-, see below; Hi. jhākar, jhūngā "bramble, brushwood" prob. from ja-ga "entangled", cf. Nep. jagaṭo, jhākro). S. tikur "open, bare, treeless, wide", tikuri(a) "open, dry", M. tikurā "a piece of upland surrounded by lowlands" are ambiguous (cf. da-ga "wide open").
- 3) (stem stripped of leaves >) "stalk, rod": So. ĕjān- "dry stalk", S. ḍan "staff, pole, rod" and Hi. ḍān "stick, club, high land"; Hi. ḍankā "a drum-stick" ²¹), ḍhēgā "cudgel, walking-stick", ṭhēgā "a small club, stick", Pkt. jhankara-, m. "withered tree" (śuṣkataruḥ, Deśīn. 3, 54), Hi. jhākār, jhākarā "leafless branch, a tree with bare branches, a leafless tree", jangrā "the haulm or stalk of autumnal crops", Nep. ḍāklo "stalk, stem, stock", ḍinnu "a small stick used for driving animals", ṭāno, ṭāgo "rod, measuring rod, fishing rod", perh. also lākhinu "to be pruned, to be trimmed" (< *lakṣ- according to Turner).
- 4) (bare, deprived of >) "poor": S. thọn thọn "very poor, empty", rengec' "poor, hungry", dingar "poor, low, indigent, beggarly" (perh. reborrowing from Hi. digar), lanta "naked, featherless, stripped of everything" (possibly influenced by Hi. nangtā). Cf. Skr. ranka-, m. "beggar, wretch" (Mālatīm., Prabodh.), Hi. rākhā and Pkt. ronkaṇa-, roghasa-, (Deśīn. 7, 11) id. The suffixes of the Pkt. words may both be variants of -at, which occurs in regoția, Nep. jhankat (see sub 7, and cf. also

²¹⁾ But cf. Turner s.v. dankā.

- S. ceṅgor, M. diṅgrā, etc.). Nep. sikre "poorly, weak, leafless", sikro "sickly, poorly, weak", and sikuṭe, sikaṭe "sickly, weak, thin" no doubt also belong to this word-group, cf. Pkt sigga- "tired" (śrāntaḥ Deśīn. 8, 28), siṅgaṁ "lean, emaciated" (kṛśam 8, 28).
- 5) (bare, stripped >) "unmarried, having no children": S. dangua "unmarried, bachelor, barren, unfertilized (trees)", denga dangua "who have no children as yet", M. dāngrā, dhāngrā "unmarried, boy, servant" (see under 6).
- 6) (deprived of company >) "solitary", cf. Nep. thingo "solitary, standing alone", tinaro, tigaro "solitary, alone, lonely" (cf. S. tingrau "to cut off", and the Kui lw. tangara "bald").
- 7) (bare, stunted >) "short, small" a) > "boy"; b) > "insignificant": S. cengor "small, immature", cun "small, insignificant", tangon "stunted, thin and small (tree)", taku "to be stunted, to be backward in shooting forth ears", rega, regoția, regoțhia "puny, dwarfish, undersized, stunted", rangap' "slim, slender, lean, spare", M. dingrā "dwarf and roundish", dunguj' "short", dāngrā, dhāngrā "unmarried boy, servant", dhāngar "servant". Cf. Skr. lex. dingara-, m. "servant" (Hemac.), Hi. dingar "servant, slave" 22), Jaina Pkt. dikkarūva-, dekkarūva-, Deśīn. limka- "boy" (bālaḥ 7, 22), Mar. lek, lekrū "child"; Pkt. simgaa-, m. "a youth" (taruṇaḥ, Deśīn. 8, 31), Mar. śīgā "young horse, foal"; Pkt. rikkam "a little" (stokam, Deśīn. 7, 6). Cf. further Hi. tungā "a short tail", tuniyā "very small, tiny", thēgnā, thīgnā "stumpy, short", Nep. lanaro, lanro "lame" (orig. sense "maimed", see Turner s.v.), Hi. langar "worthless, mean, vile" (? also "dissolute fellow, libertine, rake", see s.v. śṛṅgāra-), Nep. jhankat "worthless".
- 8) "hornless" > "deer, antelope": S. jhankar "axis maculatus, the spotted deer". Cf. Hi. jhākh "stag, elk, deer", jhāk(h)ār, jhāk(h)arā, jhākhārā "a leafless tree, a stag, an elk" (so called from the resemblance of its horns to a leafless tree, Platts). Words which mean "hornless" may in various ways come to denote a species of deer, cf. Nep. muruli, mūruli "female deer, doe, a woman with a shaved head" (fem. of murulo, mūrulo "hornless, shaven, bald"). We may accordingly also compare Skr. ranku-, m. "a species of deer, the spotted deer, the axis" (Vāsavad.), which then bears the same relation to ranka- "beggar" as Skr. rúru-, m. "a kind of deer" does to Pkt. rora- "rankaḥ" (Deśīn.) 23). Goranku-, m. "a naked man" (nagnaḥ Hemac.) is doubtful, see Pet. Dict.

²²) Hi. dingar "a rogue, cheat" is perhaps a different word, cf. Skr. lex. jagala-"deceitful" (Hemac., Med.), Hi thagnā "to cheat, deceive", dhōg "fraud, deceit", Nep. chakinu "to be deceived": S. thak, thakua, Ho cakad "to cheat". See however Turner s.v. dingar.

²³) Nöldeke compared ranku- with Pers. rang "Bergschaf" (see P. Horn, Neupers. Etym. 139) but, like most other words for "antelope", ranku-, which is a word of the late Skr. literature, will be a loanword.

Among the derivatives from \$\dar{q}a\$-\$\dar{q}a\$ parallels are found to each of these eight semantic sub-groups, e.g. 1) S. <code>jharao</code> "to strip off"; 2) S. <code>tandi</code> "to clear, bare (jungle"), an open field"; 3) S. <code>dandi</code> "bare stem, stalk, staff", <code>jhata</code> "stake, branch, pole"; 4) S. <code>dhandkao</code> "to be stripped, to be utterly poor" (cf. Pkt. <code>thalla-</code>, <code>dhella-</code> "poor"); 5) S. <code>thāt</code> "barren, childless", M. <code>dindā</code> "virgin, unmarried, barren", Kh. <code>dindā</code> "virgin", etc. 6) Hi. <code>charā</code> "separated, solitary, alone"; 7) see below s.v. <code>sunthá-</code>; 8) Skr. <code>rúru-</code> "deer". See further s.v. <code>dandá-</code>.

- § 11. Skr. j h a m p ă- m.f. "jump" (Hitop., Rājat., Kathās. 61, 91; 103, 8: 115. 68. cf. Speyer, Studies about the Kths. 80), jhampati, jhampayati "leaps" (see Schmidt, Nachtr.); the lexicographical works moreover quote jhampāka-, jhampin- "monkey". Variants are: campana-, n. "leap" (Pañcad.), lampha- "a leap, spring, jump" (S'abdakalpadr., which also gives ullamphana-, pralamphana-), cf. W. Beng. lāph "leap", Hi. lapaknā, Nep. lapkanu "to leap up". S. K. Chatterji, Journ. Greater India Soc. III, 1936, 49 24), proposes to connect lampha-, laph with Nep. lappa "wrestling" and Malay lompat, which cannot be correct, as the root is apparently dα-ba, cf. Hi. jhap "a spring", Nep. tapkanu "to jump, skip", Hi. tapnā "to jump", tappā "a spring, leap, jump", Beng. tāp "jumping, stamping of foot", Sant. lep" "to skip", etc. Rather than with Mar. jhapjhap (see Bloch 337), these words are connected with S. dhamcuk' marte, dhamcul marte "with a leap, a spring, a bound", dubhau "to spring, issue, as water from a spring". Note: S. jhapat, jhapot, capot, "to pounce upon and press down" is influenced by da-ba "to press" (see p. 57). Hence Nep. jhamtanu "to spring upon, assault", ihaptanu "to seize, to pounce upon".
- § 12. Skr. $picch\bar{a}$ -, f. "calf of the leg" has recently been connected with Tulu potte, Telugu pikka, Kui pota, Gondi photari, Malto bagdpoti, id., and further with Uralian words as Finnish pohkea, pohje, id., Ostyak pec' "thigh", etc. (see Burrow, BSOAS. 11, 347). The comparison with Uralian is based on the supposition that Tulu potte etc. are native Dravidian words. On the other hand, Skr. picchā- must be identical with picchā-, f. "lump, mass, heap, multitude" (Caraka, see Pet. Dict. VII, 1771); cf. such parallel instances as pindikā-. f. "a round swelling or protuberance, esp. a fleshy one" (Suśr., Yājñav.), dual "the calves of the legs", Nep. pītulo, Bashkarik pīn, pin (< pinda-) "calf of the leg", Pashto yaṭai, id.: yaṭai "coarse bread" (see Turner, BSOS. 5, 122). If, however, the original meaning of picchā- is "lump", it cannot reasonably be separated from pinda-, m. "a round mass, lump, globe, ball, knob" (since RS., Taitt. S.), pindaka-, m. "fleshy protuberances" (Harṣac.), pidakā-, f. "a small boil or pimple" (Suśr.), piṭaka-, m.n., piṭakā-, f. "boil, blister" (Var. BS.,

 $^{^{24}}$) See also "The Origin and Development of the Bengali Language" p. 480 on Beng. $jh\tilde{a}p$, "jump, plunge".

Rājat.), lex. biṭaka-, m.f.n., id. (Rājanigh.) 25), Pa. piḷaka-, f. "a small boil, pustle, pimple; a knob (of a sword)". Piccha- must accordingly stand for *piṭa-, cf. Pkt. paccha- "piṭika-" (Deś. 6, 1).

Many variants suggest a foreign origin of this group of words. Thus we find, with u, o for i, e.g. Skr. $pul\bar{a}ka$ -, m. "lump of rice", lex. potika-, m. "boil, blister", Pkt. $pudaia\dot{m}$, $pundaia\dot{m}$, by the side of $pendalia\dot{m}$, $pendab\bar{a}la\dot{m}$, $perull\bar{\imath}$ (and $pindalia\dot{m}$, comm.) "made into a lump" ($pind\bar{\imath}krtam$, Deśīn. 6, 54); and, with initial b, bh: Pa. bhendu-, bhendu-, bhendu-ball, knob, cupola, round tower", Hi. bhind, $bhind\bar{a}$ "round ball or mass, lump, block", $bhel\bar{\imath}$ "a ball or lump", Mar. $bhel\bar{\imath}$ "lump" (: Pa. pela-, id., Hi. $per\bar{a}$ "a ball or lump of leavened dough" 26), per, $p\bar{e}d$ "ball, lump"), Hi. $bar\bar{\imath}$ "small lumps of pulse, small balls of charcoal", etc. They clearly point to a radical element *bi-da, *bu-da, *ba-da. The IE. derivations proposed for pinda- are accordingly to be rejected 27).

The question remains to be answered whether pinda- and its congeners are Dravidian or Proto-Munda loanwords. On account of the primary meaning "fleshy swelling" pinda- and its modern equivalents may denote several parts of the body. Thus Kumaoni pinī means "thigh"; cf. also Nep. philo "the fleshy part of the thigh and buttocks", which is an independent borrowing from the same foreign source. Now the Torwali and Bashkarik word for "thigh" is mandal (Kshm. mándul), which corresponds to Shina pal. pathālo, Kandia phatālu (Acta Orient. 18, 244). Morgenstierne, Acta Or. 8, 306, questions the derivation from Skr. mandala- and points to Panj. pinnī, Palola pinnī "calf of the leg", which would, indeed, provide the most natural explanation. Since the *m*- cannot be due to assimilation, the question arises whether it may represent the Munda nasalization of w/b/p. It should be noted that Dardic and Kashmiri preserve several interesting Munda relics which are not known from other NIA. languages, e.g. Bashk. šōrúṇḍ, Palola šōruṇḍo "orphan" (see s.v. daṇḍá-), Bashk. čüpuṭ. čipuṭ "full" (?) Bashk. dut, Torw. dūt "lip" (see s.v. śundā-), Bashk. lūkut, Kshm. lŏkuţ" "small" (see s.v. kuntha-). On the other hand, variants of pinda- with initial m- also occur in Sanskrit, e.g. in moțaka-, m.n. "globule, pill" (: potika- "boil") and in a word for "gourd".

The gourd is denoted by several Proto-Munda words which properly mean "round and thick", e.g. tumba-, m. "a kind of long gourd" (from da-ba "globular"). Thus Skr. lex. $pind\bar{i}$ -, f. means "bottle gourd" ($al\bar{a}bu$ -), and Hi. $peth\bar{a}$ "a kind of gourd" is apparently a modern borrowing from

 $^{^{25}}$) Burrow, BSOAS. 11, 354, explains *piṭaka-* as a Dravidian word but ignores the existence of a variant with b-.

²⁶) "Connection with Skr. pindah is not clear" (Turner s.v. perā).

²⁷) Piṇḍa- has been connected with $p\bar{\imath}d$ - (Grassmann), with Old Engl. flint (see Wackernagel, Altind. Gramm. I, 170 with bibl., but cf. Güntert, Labyrinth 22. on this word), with Lat. puls (Lidén, Studien zur altind. und vergl. Sprachgesch. 87, cf. Walde, Lat. etym. Wörterb. 2nd ed., s.vv. pila and puis). with Skr. piṣ- (PTS. Dict.), and with piś- (<*pimsta-, Thieme, ZDMG 93, 1939, 133 f.).

the same source from which Skr. lex. piţankākī-, piţankokī- "colocynth" have been taken 28). As a matter of fact, Skr. lex. peṭālu-, peṭakandaka-, m. "a tuberous plant" (: lex. pindālu-, pindakanda-, id.) show that peţ- is an ancient variant of pind- (cf. Pa. pela-, Hi. bhelā, perā, quoted above). Now, Skr. kuṣmāṇḍa-, m. "pumpkin, gourd", which is clearly a Proto-Munda word with prefix *kus-*, has the following modern equivalents: a) with m-: Beng. $kumar\bar{a}$, Hi. $kamrh\bar{a}$, Sgh. komadu. b) with bh/p: Pa. Pkt. kumbhanda-, Nep. kubhindo, kupindo. The last word is obviously a direct borrowing from Munda, with the variant prefix ku- (cf. Pkt. kuhanda-, kohanda- from *ku-bhanda-) and the rootword bhind-/pind-. Since kupiṇḍo "a particular kind of long gourd" is obviously related to Skr. piṇḍī-"bottle gourd", it follows that pinda- and picchā- are Proto-Munda words. The native character of Tulu potte, etc. is accordingly rather doubtful. Note also Hi. Mar. phūṭ, Beng. Nep. phuṭ (Sanskritized sphuṭi-, lex.) "melon", and Skr. lex. bhaṭā- "colocynth" (Beng. bhāṭā "ball, egg-fruit"): cirbhațī- "cucumber" (Pañcat.), carbhața-, m., id. (lex.), cirbhită- "gourd" (lex.). No connexion with Old Engl. hwerfette (Uhlenbeck).

Skr. kūṣmāṇḍa- (Yājñav., Bhāg. P., Kathās.), kūśmāṇḍa- is also the name of a group of demoniacal beings; cf., e.g., in the śravaṇaphala of the Vetāla tales: Yakṣavetālakūṣmāṇḍaḍākinīrākṣasādayaḥ (Kathās. 99, 29). In Buddh. Skr. kumbhāṇḍa- (= Pa. kumbhaṇḍa-, m. "a class of fairies or genii grouped with Yakkhas, Rakkhasas and Asuras") is used instead, which the Pet. Dict. explains as a compound of kumbha- and āṇḍa-. Both names probably denote pot-bellied beings like the Yakṣas. Cf. udumbála-, epithet of goblins in the Ath. S., and Hiḍimba-, name of a Rākṣaṣa (see p. 66), which bear the same relation to tumba-, m. "gourd" as kūṣmāṇḍa- does to kuṣmāṇḍa-, m. "gourd".

As has been shown above (s.v. dimba-), words for "bean, pulse" are sometimes derived from roots with the general meaning "globular, thick, roundish". The following words seem to be derived from the same root as pinda-, picchā-:

with bat-: Skr. lex. barbaṭa-, m. barbaṭī-, f. "vigna catjang" (Dolichos sinensis, cf. Helen M. Johnson, JAOS, 61, 170), Nep. boṛi "a partic. kind of bean", Hi. būṭ "chick-pea".

with mat-: Guj. Mar. math; with suffix -ar: Hi. Beng. Nep. matar, Panj. mattar, mattar "pea, Pisum sativum". — S. mator, motor, and M. matar "a kind of pulse, Pisum sativum" are prob. loanwords from Aryan, but cf. M. batura, S. batra (Campbell) "a kind of pulse": Kh. batur "bronchocele, elephantiasis".

with mas-: Skr. māṣa-, m. "bean" (since Ath. S., Vāj. S., Kāth. S.), Hi. mās, id., Nep. mās "lentil". With the same suffix as found in Hi. maṭar: Skr. masūra-, m. "lentil, Lens esculata" (Roxb. Cicer lens) (since

²⁸) Cf. Hi. kubaṛ: Skr. kubhra-, (p. 43), Nep. ṭuhuro (p. 75), tumbo, etc.

Vāj. S.), cf. Hi. masūr, masūrā, masūrī "a kind of pulse or lentil, Ervum hirsutum or Cicer lens", Nep. musuro, etc. The original meaning "swollen" accounts for Pa. masūraka- "bolster" (cf. masāraka- "a kind of couch")²⁹).

Hi. pet "belly, stomach" is usually derived from *petta- = Skr. peta-, pitaka- "basket" (see Platts, Turner s.v. pet, etc.). Taken in itself, this is quite possible. The existence, however, of Pkt. potta-, n. "belly" (udaram Deśīn. 6, 60), Mar. pot, id. suggests that the relations between pet and peta- are not so simple as this explanation presupposes. Bloch 371 derives Mar. pot from Skr. pusta-, whereas Turner connects it with Nep. poti "bulb", Skr. puta-, m. and modern words for "bundle" 30). There can be little doubt, however, as to the Munda origin of Mar. pot, cf. S. pota "stomach, belly" (Hi. poṭā): poṭea, poṭeoṭ', peṭreṭ', beṭreṭ' "big-bellied", Ho puti "to have a swollen stomach", etc., and numerous other words as S. bido bodo, bhido bhodo "fat, corpulent", bindiol bondeol, bhanda bhoṇḍo, bhuṇḍa (etc.), id., darmot, datmot "sturdy, robust" (da-da+ba-da). The original meaning is "swollen", cf. S. pote "to bulge, to form within the sheath (paddy, etc.)", potkel "to bud (the breasts)", beker bendan "swollen, puffed up, to swell up, become distended". If, however, Mar. pot is a Munda loanword, Hi. pet "belly", petal "big-bellied" must be derived from the same source. Nasalized variants are, e.g., Hi. mot, mota, motal "fat, plump, stout, corpulent" (see Turner s.v. moto) 31): Nep. bhūre (bhūtu?) "big-bellied". It follows that the whole wordgroup of Tam. pottai "anything large or bulky" (pottaiyan "stout man"), motu, mottai "bigness, bulkiness", motti "protuberance, swelling", Kann. potte, bojje "belly, paunch", pode "belly, pregnancy, pregnant ear of corn" (cf. Tam. potti "ear of grain in sheath"), bojju "pot-bellied": modu "boil, tumor", mudde "roundish mass, ball, roundish lump" must be of Munda origin.

As for peṭa-, etc. "basket", it cannot be decided whether its original meaning was "bulging" or "plaited". This group shows the same variation of e and o as the word for "belly", e.g., Tam. peṭṭi, poṭṭi "box". Some instances suggest a connexion with the words for "bundle", e.g. Kann. moṭṭe "a leather bag, a bundle, load": puṭṭi, buṭṭi "basket made of cane, bamboo or palmyra leaves". On the other hand, Hi. meṭ, meṭā "earthen water-pot, jar, pitcher", mīṭt, mīṭā "pitcher, cup" perhaps point to a primary sense "roundish" 32). Equally obscure are Skr. samudga-, m. "small round box"

²⁹) Cf. Kann. $m\bar{u}de$, $m\bar{u}dave$ "pillow, cushion" (: mudde "roundish mass, ball, lump")? Pa. cumbata, cumbata, cumbata, "pillow" is ambiguous; like M. $r\bar{a}mb\bar{a}r\bar{a}$, $r\bar{a}mb\bar{r}\bar{a}$ "a kind of pulse, Phaseolus Roxburghii", it may either contain a prefix (cum, $r\bar{a}m$) and the root ba, da, or a root da-ba (see dimba-) and a suffixal element -ad (-at, -ar).

³⁰⁾ See for these words s.v. mendha-.

³¹) Sgh. *moṭa* "blunt" is a different word. It belongs, like the corresponding Dravidian words, to the affiliation of *bandá-*.

³²⁾ Cf. such parallel instances as Pa. kolamba- "pot, vessel", (<*ko-ḍamba-), Hi. dibiyā "a tiny box or casket". dubhā "a small kınd of water-pot", dabrī 'an earthen water vessel, cup, bowl", dabbā, dibbā "a round wooden box, casket", etc., from Munda ḍa-ba "roundish" (see udumbára-, dimbha-, āḍambara-, etc.).

(Rām., Suśr., Yājñav.), "round form of a temple" (Var. BS.), Pa. samugga-(v.l. sumugga-, see Geiger, p. 46 f.) "box, basket" 33).

The last word leads us to consider the question, if Skr. mudga-, m. "kidney bean, 'black gram', Phaseolus radiatus Linn." (Pa. mugga-, id., Nep. mun, mug "lentil") may be connected with masa-, m. "kidney-bean, 'black gram', Phaseolus mungo Linn." 34). Many Santali words for "fat" contain a "suffixed" g (which is probably due to a blending of ba-da and ba-ga "fat"), e.g. badgot', bodgoe, badgae bodgoe, bhindgo bhondgo, bondkol, etc. "exceedingly fat, strapping". Both species of the Phaseolus are closely related, and mugga- and masa- are usually combined in the Pali texts (see PTS. Dict.) 35). Variants with d, it is true, are wanting (Hi. moth "Phaseolus aconitifolius" is from Skr. makustha-, id.), but cf. garmút-, f. "bean" and bud- in arbuda-, m.n. "long, round mass, foetus in the 2nd month after conception, swelling, tumour, polypus" (Nir., Suśr., Yājñav.), Pa. abbuda- "tumour, cancer, sore, foetus, etc.", which are clearly Proto-Munda words (prefix ar-). Ved. árbuda- (in the youngest mandalas arbuda-; later also arbudha-, arvudha-, e.g. Bharatamani. 3, 616) is probably the same word. Wackernagel, Altind. Gramm. I. XXII. acknowledges its foreign origin, but it is not clear what its primary meaning was. Konow, The Aryan Gods of the Mitani People 25 ff., holds the Mount Abu to be meant in all Rigvedic passages, "the isolated Arbuda mountain being appropriately designated as a tumour of the earth" (p. 29). See also Hillebrandt, ZII. 3, 14 f. (a mountain in Kashmir?). As it was probably believed to represent the primordial hill, the abode of the serpent ${
m Vr}$ tra, the serpent demon ${
m \it Arbuda-}$ (${
m \it S'}$ at. ${
m \it Br.}$) must have been named from

The primary meaning of ba-da was "swollen, (fleshy) protuberance", which accounts for M. Ho buti "navel" (Tel. boddu, id., Nep. Beng. $bh\hat{u}ri$ "abdomen, belly") and Skr. potika-, m. "boil", Hi. $phosk\bar{a}$ "blister" ³⁶), as well as for Pkt. $vel\tilde{a}$ -, nimela-, nimela- "gums" (danta- $m\bar{a}msam$ Deśīn. 7, 74, resp. 4, 30) ³⁷), Nep. philo "the fleshy part of the

³³) In the Śat. Br. occurs arkasamudgáu (Pet. D. "Hülse einer Pflanzenfrucht", Böhtl.: "Knospenspitze"), which however hardly supports the derivation from sam-ud-gam-(Patañjali, Wackernagel, Altind. Gramm. I, 181); according to Sāyaṇa it denotes two opened "lip-parts" at the top of the Arka-pod (Eggeling a.l.). The word is probably composed of a prefix sa-, su- (cf. su-ruṅgā-, sā-raṅga-, Acta Orient. 17, p. 30 ff., 310) and a root word mudga-. But, while the meanings given in the Pet. D. suggest an original sense "roundish", the Mitākṣarā derives it from mudga- "pidhānam" (cf. also Tel. samudgamu "a casket, a covered box", Kann. samudga, id.).

³⁴⁾ See Helen M Johnson, JAOS. 61, 168.

³⁵⁾ Similarly mudgara-, m. "mallet" (cf. músala- musala-, musala, n. "pestle", K. mundā "to beat") from bud- (Pa. potheti, potheti "to beat, strike")? But cf. Tam. mōtu-, mottu-, Tel. Kann. mōdu-, id.

³⁶) Cf. Ho *pusri* (*pursi*) "pimple". Burrow, BSOAS. 11, 354, derives the Hi. word from Dravidian.

³⁷) Unlikely Pischel § 122 (< *nipīdya-); ni- is a Proto-Munda prefix, see p. 124, n. Cf. perhaps Skr. puppuṭa-, m. "Anschwellung an Gaumen und Zahnfleisch" (: puppula-"Blahung", pupphusa-, phupphusa-, phupphusa-, Pa. papphāsa- "lungs").

thigh and buttocks" 38), Hi. pūth, putthā "the buttock" (Sanskritized pūta-, lex.) 39), Tam. puttam "buttock, pudendum muliebre". Cf. also Sgh. puranu "to swell" (see Turner s.v. phurnu "to throb, to swell"), Nep. phulinu "to swell, to be puffed up", Hi. phulaurī "a small puffed cake", Nep. phul "egg, testicle" (orig. "swollen", cf. W. Pah.koci pinni, rampur pīnni, id. < *piṇḍ-, see Turner, BSOS. 5, 129). In Munda we find on the one hand Ho peto, pero "egg, testicle", M. peto "egg", on the other hand, S. bele, M. bili "egg, testicle", Ho bili "egg" (cf. Pa. bilali- "bulbous plant, tuber" and Skr. pela-, m. "testicle") 40). Dravidian loanwords are, e.g., Kann. motte "egg" (: moddu "lump, mass", modu "boil, tumour") and Tam. potti "scrotum", puttā "swollen testicle", puttai "elephantoid scrotum", ponti (Tel. boda) "swelling", Kann. budde "a rising or swelling, a swollen testicle" (cf. Pkt. pottaa- "swollen testicles", Deśīn. 6, 62). As for Lith, paûtai "testicles" see Specht, Urspr. der idg. Deklin. 220. Skr. muská-, m. "scrotum" (since RS.) is of IE. descendance, cf. Lat. musculus, Greek μύσχον (see Brugmann, Grundriß der vergl. Gramm. der idg. Spr., II, 1, 483).

From the same root are obviously derived Skr. vatī-, f., vaṭaka-, vaṭṭaka-, m., vaṭakā-, vaṭikā-, f. "a small lump, pellet, pill" (Lex. vaḍā-, f., id., vatin- "circular, globular"), Pa. vataka- "a small ball or thickening, bulb, tuber", vatti- "lump, ball" (or < *vrtti-?), vathara- "bulky, gross" (Buddh. Skr. id.), varaka- "the bean Phaseolus trilobus". Cf. Hi. barā, barī "lump of pulse", Nep. bari "pellet, pill", etc., and S. buri "small balls, pill", M. buru "cakes made of pulse". Possibly Hi. barā, Nep. baro, Mar. vād, etc. "big, large, important" have the same origin, the Aryan word mahān having been supplanted by a vulgar word for "thick". Note especially Torwali bar "thick, fat". The modern word is usually derived from Skr. lex. vadra-, cf. Pkt. vadda- "mahān" (Deśīn. 7, 29) 41), which however may be Proto-Munda loanwords, cf. Skr. ulbana- "massy, thick, big, huge, full of ' (with prefix ul-), Skr. Pa. vathara- "bulky" and Pkt. viddira- "expanse, extension" (ābhogaḥ Deśīn. 7, 90, cf. Skr. lex. pāṭa-, m., piṇḍa-, id.), bodara- "pṛthuḥ" (6, 96), and peḍhāla-, pejjāla- "vipulaḥ, vartulah" (Deśīn. 6, 7), which Pischel § 122 rightly combines with pinda-; Nep. phadilo "capacious, large", Beng. phae "circumference" (< phanda-?), pār "huge, ungainļy, ugly" (< panda-? Chatt. 496, 365). Only a more detailed investigation could decide this question. Nor can I enter into a discussion of such ambiguous words as puñja-, m. "heap, lump, mass,

³⁸⁾ Unlikely Turner s.v. (< *sphijalla-?).

³⁹) Cf. the parallel instance Skr. pota-: Hi. potā "young of an animal" (see p. 100).

⁴⁰⁾ As for pela-, see Schmidt, Nachtrage s.v. — The original meaning of S. bele, M. Ho. bili, K. bīlī, Kh. belom, G. bullo "to ripen" may have been "to swell" (Konow, Gott. Gel. Anz. 1906, 234,compares Khmer ple, Bahnar. Stieng plei "fruit").

⁴¹⁾ Cf. Bloch 405, Turner s.v. baro; otherwise Chatterji 496 (baṛā < *vaṭa < vṛṭa-). Paravastu Venkata Ramanujaswami in his edition of the Deśīnāmamālā. Introd. p. 8 and Glossary 76 (vadḍa- from Tel. oḍdu) and Tedesco, JAOS. 65, 1945, 88, 91 f. (< vṛḍdha-).

multitude" (cf. lex. pañjala- "a bulbous plant"), lex. pola-, m. "mass, multitude", paṭala-, n., paṭalī-, f. "heap, mass, multitude", sphuṭ- (Pa. phoṭa-, phoṭaka- "swelling, boil, blister"), puṭa-, phaṭā-, phaṇa-, etc.

It should however be observed that Nep. bhelā "crowd" is to be separated from Hi. bhelā "lump" as it belongs to a root bid- "to be crowded", cf. Hi. bhīr "multitude, crowd, throng", bhirnā "to draw near, come together, close to", Si. bhiraņu "to meet": miraņu "to crowd, throng" 42), etc., Skr. nibida- "thick, dense, close, tight, full of" 43), and S. ibil "dense, thick, crowded, standing close together", pete pete, "crowded, crammed, to fill over-full", rete pete, rente pente "crowded, thronged, closely together", So. bīdā- "herd, flock", Mon bet, sabet "to be crowded, close together". Cf. Skr. peta(ka)-, m. "crowd" (Yaśastil.) and see p. 135 (ni-mis-).

§ 13. S'ikhā-, f. "top, point, summit, end; tuft or braid of hair, a peacock's crest; flame, ray of light" (S'at. Br., etc.), śikhandá-, m. "tuft of hair or a peacock's tail" (Taitt. Samh., Taitt. Br., S'at. Br., etc.), śikhara-, m.n. 'peak, top, summit' (S'āṅkh. Br., Mhbh., Rām., etc.), śekhara-, m. "peak, point, summit, head, crest, garland, diadem" (Kathās., etc.). No plausible IE. derivation is known, see Uhlenbeck and Walde-Pokorny I, 455. The root element is śikh-, śekh-. Lassen, Ind. Altertumsk. I, 538, held Tamil tōkai "peacock" (Mal. tōge, etc.; hence Hebrew tukkī "peacock", see lastly Gray, Foundations of Language 387) to be a Southern form of Skr. śikhin- but neither its form nor its meaning ("feather, plumage, tail of an animal, woman's hair, anything hanging down") indicate an Aryan origin. As for the Proto-Munda formative element -and, cf. S. jhol-and "thicket": jhur, jhor, jhond, id. S'ikhara- and sekhara- either contain the variant -ār < -and (cf. S. cik-ār "polished, glossy": cik cik, id.) or -ar < -ad 44), cf. Mar. tekad, ţekād, Guj. ţekrī, Hi. ţekar, ţekrā, ţegrā "heap, mound, hillock, rising ground, declivity of a hill", Nep. tākuro, tākuri "top of a hill, summit", dhikuro "mound, heap", Kshm. sangur "a steep hill" (hardly connected with Nep. \tilde{saguro} "narrow"). Pkt. tekkara. n. "sthalam" (Deśin. 4, 3) is ambiguous (cf. p. 140).

The root \$\dar{q}a\cap a\cap \text{"high"} occurs in several Munda words, as S. \$\dog a\cap a\cdot dog a! \text{"top"}, M. \$\cop a\cap \text{"the pointed stalk of any plant left after having been cut" (unless related to the word-family of \$\bar{j}\bar{a}\bar{n}ga^{\bar{l}}a\cdot,\$ see above); cf. Beng. \$\cop cokh\bar{a}\text{"pointed"}\$. This root is probably identical with \$\dar{q}a\cap a\text{"projecting, protruding"}\$, cf. S. \$\dot qok\pha \cdot qok\pha \text{"very long, projecting"}\$ (according to Campbell also \$\dar{q}ak \cdot dak a\text{ "long, tall, high, projecting"}\$), \$rak raka \text{"stretched out, standing up or out" \$\frac{45}{3}\$), \$rok rok\pho \text{"high, lofty, sticking out", \$rak\dar{n}\text{, \$rakda\dar{n}\text{, \$r

⁴²⁾ Cf. Turner s.v. bhirnu and s.vv. bhetnu, milnu "to meet". Unconvincing Tedesco, Language 19, 1943, 18.

⁴³⁾ With Proto-Munda prefix ni-, see p. 124, n. 170.

⁴⁴⁾ Unlikely Frisk, Zur indoiran. und griech. Nominalbildung 38 (IE. -ro-).

⁴⁵⁾ Contaminated with (or derived from?) da-ga "wide apart".

root) "high, tall, lanky, etc.", sek seke "standing out (in front)", sek seke "sticking out, projecting"; nasalized forms are, e.g., den den, den den "tall, lanky", den den "id., toppingly high", den "lanky, tall, big" (cf. Hi. den Beng. den "tall"), rankar "tall, high", So. lanka "high, top, above, aloft", perhaps So. beda"- "hill". Cf. Mon lanka "a point of land, a cape or a promontory"?

Other Indo-Aryan derivatives from this root are, e.g., Pkt rokkanī "horned" (śṛṅgī, Deśīn. 7, 16), Skr. tuṅga-, m. "height, eminence, mountain; adj. high, lofty, sublime" (since Mhbh., Rām.), ṭahka-, m. "peak" (Mhbh., Rām.), Hi, dāg "top", and probably Hi, dhogā "rump, buttock, hip" 40), tīkat(h) "buttocks, posteriors" (Pkt. dukkha-, id.), sūngā 'protuberance, hump, clitoris', which show a similar semantic development as S. tiki, deke "buttocks, rump", duke "hip" (dungi, donga "to carry on the hip" = dote, tote). Beng. tiki "tuft of hair, top-knot, queue", formally identical with S. tiki, has developed a similar meaning as Skr. cūdā-(see below, p. 154). As for Skr. cikura-, m. "hair, *mountain" (lex. cikūra-, cihura-) 47), see however Turner s.v. ciuri. The widespread word-group Pkt. dungara-, m. "mountain (śailaḥ, Deśin. 4, 11), Hi. dogar, dugar "hill", Beng. danga, tan. tangra, tengra "high land" (Desi dongā "high land, high", see Chatterji 179, 405, 489), Nep. dungur, dangur "heap" seems to be also derived from this root, rather than from da-ga "to bare the jungle" (see p. 140).

§ 14. Skr. śunthá-denotes certain bulls and cows in the Yajurveda (Taitt. S., Maitr. S., Kāth. S. etc.). Although some commentaries take it as meaning "white", it is now generally translated "small", e.g. $\overline{ApS'S}$. 10, 22, 6 śunthā "eine kleine Kuh" (Caland; alpakāya-, comm.). Hence śunthākárṇa- (Vāj. S., Maitr. S.), which Mahīdhara renders "short-eared", is a synonym of late Skr. būṭakarṇa- (see s.v. baṇḍá-). S'unthá- is a derivative from Proto-Munda ḍa-ḍa "1. stunted, short, defective; 2. bare"; this root is synonymous with the roots ḍa-wa (see s.v. tūpará-), wa-ḍa (see s.v. baṇḍá-) and ga-ḍa (see s.v. kuṇṭhá-), which show the same combination of meanings. We shall here confine ourselves to the first meaning, the second being treated s.v. daṇḍá-. Mon-Khmer cognates are, e.g., Mon dot "to be young, to be small", khamnon "abridged, brief", thamnon "to be short, brief", prob. tòn "to mince, chop" (and yut "to be less, diminished"?). Only a few instances will be quoted: Initial d (d):

S. duda "short, too short", duluk dukur "short, small, not properly developed", dhuluc' dhupuc' "small, puny" (dhupuc' from da-wa), M. dutu

⁴⁸⁾ Cf. Kann. tonka "hip and loins", dokke "body" (Munda loanwords).

To be separated from ankura- "hair" (= "sprout"). Hopkins, Epic. Mythol. 24, suggests connexion with Lat. cirrus, whereas Pischel, Gramm. 149, derives Magadhi cihura- from *cikkhura- < *ciksura- (IE. *qer-, *sqer-). Neither theory carries conviction. Cf. also Bloch, BSOS. 5, 741 (Drav. lw.), Scheftelowitz, ZII. 2, 271 (:κίκινος).

"stump of a tree", dedgej' "dwarf", dhaṭa ḍhuṭu "stumps of trees". — Cf. H. dū̄dā "bullock with one horn", Nep. dūṛo, dūṛe "maimed, deformed, having lost a limb", dūṛulo "maimed, armless, stump, wrist", dhoṭe "simpleminded, shallow-minded", dalle "dwarfish" (contaminated with dalle "rounded"), dalli "a dwarfish woman", etc.

Initial t(t):

S. thuta "short, maimed, shortened", tuti "a blunt arrow" (M. tuti, tote, id.), totok', totbok' "short, worn", thutka "short, to lop off", tetka "lean and small", thatkat' thutkut' "roots and stumps", thatka thutka "short, stunted", thutkuc' "bare, short", tenda "not quite full-grown", thenta "worn small or short", thunta (tuntha) "maimed in a limb", thundga "bare, without hair or branches, cropped bare, without horns", țuna "little, small, stunted", țhuni, țona "to cut into short lengths", tura "stunted, crippled, small", terok' "dwarfish", toret' "to be undersized", thurka "dwarfish, dwarf"; M. tunta "leprous, leprosy", Ho tuikā "dwarf" (< *tuṛi-kā or *tuy-kā), cf. Ho toṭā "naked". — Cf. Skr. lex. tuntuka- "small" (Med., Trik.), Pa. tunta- "with mutilated hands", Pkt. thuntha-, m.n. "stump", Nep. thuto "a stump of a tree or maize, polled, hornless, hairless", Hi. tuṇṭā, tuṇṭā, thôṭhā, tôṭā "having the hand (arm) amputated", thutha "id., having its branches lopped and leafless", thotar, thotrā "blunt", thotā "id., blunt arrow", tund, tūdī, tondī "a hand or branch that has been cut off, stump of a branch, or arm, etc.", thuthi "small stump, stalk", $tu\tilde{n}j$ "very little, very small", Hi. $th\tilde{u}t(h)$, Beng. Mar. thot "stump", Beng. tunī "little one, a little girl", Hi. thorā "small" (the derivation from *stoka-da- is hardly correct), Nep. thuro "half-burnt log of wood", thur "dry branch" (cf. Pkt. thuda-, n. "treetrunk"), thoso "stubble", etc. Hi. tattū "an undersized horse, pony" may be connected with S. thatka thutka "short, stunted", thatra "emaciated, lean, only skin and bones". Hence Pkt. tāra-, m. "a horse of inferior quality" (adhamaturangan Deśin. 4, 2), Skr. lex. tara-, m. "horse" (Hemac., Med.), Mar. tār "mauvais cheval, rosse" probably reflect Proto-Munda variants with r < i < d, cf. S. tarac' turuc' "very small (animals, children)", terec' tipuc', id., tira "a dwarf, small-sized". When the modern and the Sanskrit forms of a word represent different (dialectal) variants of the same (Proto-) Munda original, the NIA. form often helps us to elucidate the Sanskrit word (see kubhrá-). Since the original meaning of Pkt. thūṇa-, m. "horse" (aśvah Deśīn. 5, 29) is unknown, it cannot be decided whether it is identical with S. tuna "little, small, stunted", etc.

Initial r:

S. riundi, rețhea, rețhe, rețhma "small, under-sized, stunted", etc. — Skr. lex. randa- "mutilated, maimed", runda-, adj. "mutilated" m. "a cripple, a mere trunk" (e.g. Yaśastil. 1, 595, 4, comm. kabandha-), in

Pkt. also "a severed head" (Jacobi, Ausgew. Erzählungen 7, 33 and 36, cf. J. J. Meyer, Hindu Tales 27, n. 1). Hopkins, Epic Mythology 20, who defines it as "a mangled headless corpse, a late equivalent of the epic kabandha-, a torso which dances on the battle-field", seems to connect it with bhāruṇḍa-, bheruṇḍa- (see also Charpentier, Suparṇasage 357) 48). For further particulars and the NIA. forms see the ample discussion of this word by Tedesco, JAOS. 65, 94, whose derivation from *vṛddha- is however unacceptable. Cf. esp. Lhd. roḍā "hornless" (: Pj. roḍā "shaven"), Kshm. ronu "having a deformed arm", Nep. runu "tiny, very small", etc. — Skr. rūru-, m. "a kind of deer" (since Vāj. S.) is probably to be derived from the same root in view of such parallel instances as Skr. camūru-, Nep. mūruli, Skr. raṅku- (p. 141); like Pkt. rora- "beggar", it rather belongs to da-da "bare".

Initial 1:

S. leṭra "little (child, etc.), small and lean", luṭa "deformed, crippled, stunted", leṭrok', leṭrot', leṭpiṭia "emaciated, puny, stunted" (piṭ- from wa-ḍa, see baṇḍá-), leḍe poṭe "small", leda "too short", laṇḍha "stubble of cereals", M. leṭhā "lame, defective". — Cf. Hi. luṇḍā "tailless, bobtailed, docked", laṇḍūrā, laṇḍorā, "id.; stripped of branches and leaves" lūlā "lame, crippled, maimed, without hands", lunj(ā) "without hands (and feet), lame (of hands, feet), crippled", lāḍā "short, scant, tail-cropped", lūḍ mūḍ "tailless and bald, bare, stripped", Pj. laṇḍā "short", Nep. līṭo "tailless, having the tail cut off, worthless", lulo "maimed, crippled", luto "small weakly boy", lure "lean fellow", Ass. lurumā "stunted in growth", etc. (Nep. lūṛinu "to be deprived of leaves", Pj. luṇḍā "without leaves, without wife and children", Ass. laṭhā "leafless, wifeless", etc. belong to the sub-group with the meaning "bare"). See Tedesco, op. c. 94 f. Cf. Beng. nulā "handless" (Chatterji 530), either dissimilated (for 'lulā), or with Proto-Munda nasalization (like naṛī "stick" etc., see daṇḍá-).

⁴⁸⁾ A different word is, in any case, bherunda- "a kind of beast of prey" (Saddharmap.), bherundaka- (Lalitavist., "fox" according to the Tibetan translation), and probably bhurunda- Mhbh. 3, 173, 48 Bomb., which is mentioned together with śālaurka-"hyena". With these words may be connected Pkt. bherunda- "tiger" (citrakah Desin. 6, 108), and bhuruṇḍiā- "jackal" (śivā, 6. 101), Pa. bheraṇḍaka- "jackal". The original acceptation of these words cannot however be ascertained. S. runda and M. runda mean "a wild cat", and the Santali word is used in the forest as a taboo substitute for kul "tiger" and tarup "leopard" (cf. also the use of S. randop' pusi "pinching cat" for "tiger, leopard" in the forest, when the proper name is avoided). The use of nari "jackal" for puli "tiger" in Malayalam dialects (see Ramaswami Aiyar, Journ. Andhra Histor. Res. Soc. 10, 62) may be due to a similar cause; cf. also So. goduā-kid- "hyena" · kid-, kínā "tiger". But was the original meaning "cat" or 'jackal"? - According to the legendary tradition the birds had two heads (cf. Deśīn. 6, 108 bhoruḍa-, m. "a fabulous bird with two heads" Paravastu Venkata Ramanujaswami) which recalls the dundubha, which according to later lexicographers is a nirviso dvimukho 'hih. The question arises whether both names are derived from dund- "defect", but we are unable to decide this question.

Initial c, s:

S. chote "small, insignificant", chonda "boy", Kw. cori "child" (< *condi or *condic'), etc. — Skr. kiśorá-, m. "colt, young animal" (since Ath. S.), with prefix ki-, cf. Hi. chichorā "childish, insignificant": chorā "boy", Nep. choro "boy, son" (and Kum. choro "orphan boy", Rom. coro "poor, orphan", etc., where the second meaning "bare, stripped" predominates): Hi. chut, choṭā, Nep. choṭo "small, short, mean, inferior" (cf. S. chote!); Pkt. culla-, m. "child, servant" (sisuh, dasah, Desin. 3, 22) and cola-, m. "dwarf" (vāmanah 3, 18). Besides Skr. śunthá-, cf. Buddh. Skr. cūḍa- "small, insignificant" (Mahāvy., Divyāvad.; = Pa. culla-, cūļa- "small, minor"), and cuntati, cundati, cuttayati "alpībhāve" (Dhātup.), perhaps also cunati, cunta(ya)ti, cundayati "to cut off" 49). But here, as in the case of sunda- (see below) and munda-, a difficulty arises from the fact that a homonymous root exists in Dravidian, cf. Tam. cuntu "littleness, smallness, trifle", cotti (costi) "lameness, deformity", collai "defect, ruined, emaciated", tūl "anything small", tūr "stump of a tree", tuți "littleness", tuțtuvam "little, insignificant thing". Since the Austro-Asiatic descendance of da-da cannot well be questioned (cf. the Mon words quoted above) we must assume that the Tamil words are borrowings from Proto-Munda. Cf. Kann. tundu "maimed", etc.

Besides chote, chonda, etc., Santali has a group of words with e. cf. cedga "small, puny, dwarfish, boyish", cerca "stumpy, stunted, puny", cețra "dwarfish, stunted", cenda, țenda "young, not quite full-grown" (cf. lenda "small, young", and cedea, cedga, cedra, cede, etc. "bald on the crown of the head", Ho cere "bald") 50). As a loanword it occurs in Skr. ceța-, m. (Mrcch., Sāh. D.), cețaka-, m. (Bhartrh., Hitop., etc.) "male servant", cețī-, f. "female servant" (Rām., S'āk., etc.), lex. ceḍa-, ceḍī-, etc. Like dingara-, m. "servant" it presupposes an original meaning "boy", cf. Pa. ceța- "servant, boy", Pkt. ceḍa-, m., cilla-, m. "bālaḥ" (Deśīn. 3, 10), Mar. $ced\bar{a}$ "son", ced "young woman", $cedta\bar{u}$ "little child" (see Turner s.v. celo). As for Hi. Mar. (etc.) celā "disciple", Bloch 331 f. separates it from Skr. ceta- and connects it with Kann. cillaga, cillu, cigu "smallness", Tam. cila "a few"; but according to Burrow, BSOAS. 11, 123, cil- is from kil-, which excludes in his opinion Bloch's explanation (ibid. n. 1). Hi. celā is no doubt connected with Skr. ceṭa-. Cf. Hi. beṭā (s.v. bandá-).

A nasalized derivative from da-da "bare, stripped" is S. nandan "impoverished, destitute" (either na-nda + n or nan + dan). It is possible, therefore, that Pkt. nandan, m. "servant" (Deśīn. 4, 19) is a similar derivative from da-da "small, child, servant".

§ 15. Skr. śuṇḍā-, f. "trunk of an elephant" (since Mhbh.) : tuṇḍa-,

⁴⁹⁾ But cf. Tam. tunti- "to cut, sever", tuntam "piece, fragment".

⁵⁰⁾ M. cendā "a young male or female of 13 or 14 years of age, just before puberty".

n. "beak, snout, trunk, mouth, face, point" (since Taitt. Ar., cf. tundika-"snouted" Ath. S. 8, 6, 5). Bloch, BSL. 25, 18 f. (= Pre-Aryan and Pre-Dravidian 56) derives tunda- from Dravidian (cf. Tam. tunti "beak", Gondi todī, toddī "mouth, face", Malto toro- "mouth", which was however questioned by Ramaswami Aiyar on account of the isolated character of these words (and their cognates) in Dravidian (see Congratulatory volume offered to G. H. Ojha, p. 16, n. 2, and p. 17) 51). Neither śundā-, nor the NIA. equivalents (which point to *thonta-, *thonda-, *thudda-, *totta-, etc., see Turner) allow us to decide whether these words are of Dravidian or Proto-Munda origin. Of particular interest is however the NIA. word-group corresponding to Skr. cañcu- "beak", cf. Mar. côc, cũc, tôc, Lhd. cuñi, Si. cũji, côta, Beng. côt, Guj. toc (see Turner s.v. cuco). Bloch, Langue marathe 170, held these words to be influenced by those for "lip" (Mar. õth, Beng. thõt, etc.) but they are perfectly clear if we assume an original *dunda (*danda, cf. Guj. cac). The varying treatment of d in such cases as Beng. cot, Guj. toc is paralleled by similar irregularities in the development of d to r and l (see s.v. $lor\bar{a}yati$).

The basic meaning of this word-family is "protruding, projecting", cf. Tam. cuntu "lower lip", contu "blubber lip", Skr. uttundita- "prominent", tundila-, tundila-, 'having a prominent navel", tundila- "pot-bellied", Nep. tuti "spout", etc. Now Munda has a large number of words which point to a root $d\alpha$ - $d\alpha$ with the same sense, cf.:

"protruding": S. lot loto "to swell (lip)", loc loco "protruding (underlip)", sot soto "protruding, sticking out", sota "protruding (teeth)", sitkoc' "having do.", sui sui "to pout, to be enceinte" (: dui dui, p. 134!); cutun' "protruding, standing out (posterior)" is ambiguous on account of bituc' "to turn the posterior", binduc' "to thrust out the underlip" (root da-ya?). Cf. Nep. cussa "pointed, protruding", Kann. cuñcu "projecting ledge".

"point": S. toda "the point of the wooden plough", tuṇḍi "the front end of the shafts of a cart" (reborrowing from Aryan?), Kh. tuigol "point, to point out"; S. cui cui "peaked. spiry, pointed", cuila "point, pointed. to sharpen" (and many other words as coela, suila, coega, soega, coemor, etc.), Ho cuṭkāe "tip, top, peak, point, brim of a vessel" and probably cuṇḍul (M. cuṇḍul, K. cundil) "to point with the finger" (cf. Kh. tuigol and Engl. to point; are Tam. cuṭṭu-, Kann. suṭṭu-, Kui sūṭa "to point with the finger" Munda loanwords?). — Cf. Skr. tuṇḍa- "point" in ayastuṇḍa-, dhūstuṇḍa- (Bālarām.), and tuṇḍe in the comm. on Baudh. KS. 6, 25, rendering cubuke "die Spitzen der beiden Havirdhānakarren", Hi. ṭoṭā "eaves", Nep. ṭuṭo "the point of a plough-share". Skr. sūcikā- "elephant's trunk" is ambiguous.

"top": S. tui (< tui (< tui (< tui (< tui (of a tree)", tui (of a tree)", tui

⁵¹) Highly improbable are the IE. derivations from tud- (Uhlenbeck) or *tṛnda-(Thieme, ZDMG 93, 137).

"top, firmament", condro "peak, highest point", M. cuți "the point or top of anything" (cf. Ho cuțkāe "top"). Cf. Nep. culi "top, summit", etc.

"end": M. tuṇḍu' (Bhaduri), tundu (Rakhal Das Haldar) "end, edge", Ho tuṇḍu "end" (cf. Tam. tuṭi, Kann. Tulu, Tel. tudi "end").

"tuft of hair": S. duci "tuft of feathers or hair", docot' "comb of a cock", perhaps tuila "lock of hair left on the crown of the head" (cf. tui "top"; contaminated with tuila "to make bare"?); M. cuțā (cuțā-ub') "tuft of hair on the crown of the head", Bh. curcutia, id., Ho cindi "hair-ornament". — Hence Skr. cūḍā- "top, tuft of hair on the crown of the head", Pa. $c\bar{u}l\bar{a}$ - "crest, cock's comb"; the original meaning is preserved in Skr. $c\bar{u}da$ -, coda-, m. "protuberance on a sacrificial brick" (since S'at. Br., Taitt. S., cf. Skr. cūlā- "point", cūlikā- "crest, summit, comb of a cock", Pa. cūļa- "protuberance", Ass. sulā "projection on a wooden sandal"); Pkt. chinda-, n. "cūḍā chattram dhūpayantram ca" (Deśīn. 3, 35, v.l. chiḍḍa-, cheṇḍa-, etc.), chenḍā- "śikhā navamālikā ca" (ibid. 3, 39), chillī- "śikhā" (3, 27), cada-, m., cottī-, f. "śikhā" (3, 1). The IE. etymologies proposed for cūḍā- (e.g. Wackernagel, Altind. Gramm. I, 169, Scheftelowitz, ZDMG. 59, 692, cf. Bartholomae, Zum altiran. Wörterb. 125) are obviously incorrect but the Dravidian equivalents (e.g. Tam. culi, cuțam, cuțu, culli, cūţtu "crown, crest, comb") present serious difficulties. Kittel and Bloch derived the Skr. word from Dravidian 52) but the Drav. words may be early borrowings from Proto-Munda (see below).

"hip" (lit. "projecting", cf. S. duke, M. dikkā "hip": S. dok doko "projecting"): M. duri, Ho duri-jan "hip-bone", S. dote, tote "to carry on the hip". — Cf. Pj. cūlā "hip-bone", Si. cūri "hip", Hi. dhur id., Kann. sonta, Tel. tunti, id., Kann. tode "thigh", etc.

"lip": with lot loto "to swell (lip)", loc loco "protruding (underlip)", sui sui "to pout" are connected Ho loco "lip, elephant's trunk, pig's snout", M. lāco, lockor "lip", Kh. lucur "lip", S. luţi "lip, mouth, outlet (for letting liquids out)". Cf. the Dravidian words for "lip": Kuvi luḍa, Kui toḍa, tonda, Kann. tudi, Tam. tuti, Mal. cundu. Several of these words are not in common use (see Ramaswami Aiyar, op. c. 17, who considers the possibility of derivation from tunda- and śunda-); they are prob. Munda loanwords. Initial d appears in Tulu dudi, id., and in Himalayan languages, as Dardic (Torwali dūt, Dameli, Bashkarik dut, Palola dhut "lip") and a Khambu dialect of Tibetan (Chouras'ya dūli "mouth", Ling. Surv. III, 1, 345). They must be independent borrowings (unless we should have to assume voicing of initial plosives). T. Burrow, BSOAS. 11, 337. derives Kann. tuti "lip" from *tur-ti, which he (like Schrader, BSOS. 8, 756) compares with Finnish turpa "snout, muzzle" etc., while he connects Mal. cundu "beak, bill, lips" with Finn. suu "os, ostium" etc. But So. t'od-, t'ūd-"mouth, snout" (infixed *támūd-, surviving in the compositional form tam-,

⁵²⁾ See particularly Ramaswami Aiyar, op. c. 12 f.

ci. Kh. tamod, tomod, J. tamar, Remo, GB. tummō, id.) ⁵³) is an Austro-Asiatic word, cf. Khasi shin-tur "mouth", and with nasalized initial: Ulu Indau nut "mouth", Semang tĕ-nut "mouth, lip, snout of animals", Semang lĕ-nud, Ulu Tembeling kĕ-nut, Orang Hutan of northern Johore s-nut "mouth". Tam. nunai, nuni (Mal. nuni) "point, tip, end" (which Burrow, p. 333, connects with Finn. nenä "Nase, Ende, Spitze") may represent a similar nasalized form of this root.

"nose": Nep. thutunu "nose, snout".

"buttocks" (cf. Hi. $t\bar{\imath}kat(h)$ "buttocks, posteriors", Pkt. dukkha-, id., S. tiki, deke "buttocks, rump" : dek deke "projecting"): S. lindhi "hindquarters, anus, female parts", lind bhind "corpulent, with a big posterior", M. $l\bar{a}ndi$ "buttock", etc. Cf. Pkt. duttha-, n. "buttocks" (jaghanam, Deśīn. 5, 42). Some other words for "female parts" may belong to this group, as S. tene (<*dun-), tee (<*duy <*dud) "clitoris", Hi. $t\bar{\imath}t\bar{q}$, $c\bar{\imath}c\bar{a}$ "lingula vulvae mulierum", Nep. tisi "mons Veneris aut duo labia vulvae" 54).

"navel, big-bellied" (cf. Pkt. poṭṭa-, n., Mar. poṭ "belly" : Skr. lex. poṭṭka-, m. "a boil", M. Ho buṭi "navel") 55) : Skr. tund $\bar{\iota}$ -, f. (lex. tundi-, tuṇḍi-, tuṇḍikā-) "navel", tunda-, n. "belly" 56), tundila- "big-bellied" (S'āṅkh. GS., etc.), tuṇḍibha- "having a protruding navel", etc. Cf. Hī. ṭuṇḍ $\bar{\iota}$ "navel" : tuṇḍā "knob in the back part of a turban" 57).

"chin": Hi. $th\tilde{o}_{r}(h)\bar{\tau}$, $thudd(h)\bar{\tau}$, Beng. $th\tilde{u}t(h)i$, $th\tilde{o}t(h)\tilde{a}$, $th\tilde{u}tni$, Ass. thutari, etc. (see Turner, s.vv. $th\tilde{u}ro^{2}$ and thutunu). Cf. Skr. lex. joda-"chin" 58).

If the original meaning of Skr. cañcu-, cuñcu-, caṇa- "famous, re-knowned" was "prominent", they represent the prenasalized and nasalized forms of this root $(d\alpha-nd\alpha)$ and $d\alpha-na$.

⁵³⁾ S. thuti "mouth" is perhaps a reborrowing from Aryan; but cf. Pareng tot.

The connexion of Skr. căta-, m., căti-, f. "anus" is doubtful, cf. also Tam. cāttu "anus, buttocks, pudendum muliebre", cātu "anus".

⁵⁵) Otherwise Ramaswami Aiyar, op. c. 18, who derives pot from Dravidian.

⁵⁶) The IE derivation proposed for this word (*tu-m-do-, root *teu-, see Walde-Pokorny I, 708) fails to account for tuṇḍibha-.

Semang (Plus River Valley), $d\bar{u}t$ "navel" is probably related; if so, it corroborates our assumption that the initial consonant was a sonant. Mon ponglot (pong lat Halliday) "navel" may possibly have l < d (see above, p. 133). If however Semang $l\bar{u}s$, id. would also belong to the same group, we should have to assume s < d also in Further Indian languages. Only a detailed examination of the materials could decide this question.

⁵⁸⁾ Cf. Lat. mentum "chin": ēminēre, K. otā "chin, knob, knot": S. otkoe "small protuberance", M. oto "knot", and Skr. chúbuka-, n. (RS., Sat. Br., etc.). cubuka-, (ĀpSS.), cibuka-, n. (Yājňav., Suśr., Var. BS.) "chin" (original sense "point", as may be inferred from cubuka- "die Spitze eines Altars", Sulbas., dual "die Spitzen der beiden Havirdhāna-Karren". Baudh. KS.). Since cibi-, cibu- (Lex.) may be inferential forms (-ka- in cibuka- being taken as the Aryan formative), we may perhaps compare S. buka "navel" (cf. Semang cibak, cubak, cubuk "hill, mountain", Khmer buk "beard", bak "Auswuchs" and Semang săbak "lips"?). Cf. cha-manda-, che-manda- (p. 105).

§ 16. Of the overwhelming number of NIA. instances only a very few seem to have been noticed hitherto. Chatterji 482 f. points to an interchange between palatals, cerebrals and dentals by the side of a (rather problematical) interchange between palatals and gutturals. On p. 506 he tries to account for similar cases by assuming a change j > d, whereas Tedesco, Language 19, 15, assumes j > d. Since many instances have been discussed on the preceding pages, only a few additional examples will be quoted.

Nep. sero: tero, dero "squinting" (cf. S. tera, terha, thesra, which render the connexion with Skr. tagara-60) problematical); Nep. buco "mutilated": buto "stump", bhutte "blunt" (see s.v. bandá- "maimed"); Nep. sarkanu : larkanu "to slip away" (cf. S. coret' : larkac' lurkuc', loron coron, londoc', id.); Nep. copnu "to dip, soak": M. dobe, tupu "to dip" (see s.v. jambāla-); Nep. cũgo: dhũgro "bamboo vessel" (cf. S. conga, thonga, p. 135; Chatterji 482 wrongly compares Beng. khongā, khungī, id.); Nep. loso, lojho: lothro "slack"; Nep. jhuknu: dhoknu "to bow"; prob. Nep. jhut : dhat-dhut "lying"; Nep. cheknu "to stop, prevent, hinder" : tok, rok, roktok "obstacle" (see above, s.v. jangāla-); Nep. jhāknu "to peep": Hi. dhūknā "to look, lurk, peep" (: johnā "to look at, behold"), tāknā "to look at, gaze on", taktakī, tiktikī "a fixed look, stare"; Hi. jhalnā, jholnā, jhūlnā "to swing, sway to and fro": dulānā, dolā (see p. 135: Skr. jholikā-); Nep. jhamko, jhumko "cluster, bunch", jhuppo "id., tuft" : Beng. thubā "bunch", Ass. Beng. thop, id., S. ede thompe "cluster", thaba thube "in a cluster" etc. (cf. Kann. tombe and Turner s.v. thupro); Nep. sig sigo, siga sigo, siksiko "a feeling of uneasiness or reluctance": dig mig "disgust, nausea, shuddering" (cf. Skr. dhik?); Hi. jhakolnā "to shake", jhok "a shove or push": dhakelnā (dial. dhakalnā) "to shove, push, jostle" (cf. S. dhaka, id., etc.; perhaps Mon thaka, saka "to push off" is related); chab = dhab "shape, form figure" (adj. chabīlā: dhabīlā), see p. 68.

Hi. jāgar "the thigh and the leg, leg" is connected with Hi. tāg, tāg "the leg from the hip to the foot, a share", tāgrī, tāgrī "leg, thigh", Beng. tān, then "leg", tengrī "leg of meat" (Chatterji, Origin and Developm. 482, 493). Cf. Skr. lex. tanka-, m.n. (Hem. Med. Trik.), tankā-, f., tanga-, m.n. (Hem. Med.), Pkt. tanka-, n. "janghā" (Deśīn. 4, 7). From da-ka or da-ga "wide apart", e.g., S. dak daka "wide-spreading", lan lan "with legs wide apart, wide open", tak' tak' "open, wide, extensive", lenget' lenget', lelenget', id., cag caga "to part the legs wide", ciga cage, cinga cange, con con "with legs wide apart", can can "straddling, expanded", canga "bifurcated, branching off, branch, bough". Cf. on the one hand Hi. dōghī "branch of a tree", Nep. coke "fork made by two pieces of wood", on the other Nep. tukrukka "in the position of squatting" (: S. con con "on one's hams"), Kann. jange "a stride".

⁵⁹) Similarly the PTS. Dict. s.v. $d\bar{a}ka$ - assumes s < d on account of Skr. $s\bar{a}ka$ -, cf. Bloch 116.

⁶⁰⁾ Thus Chatterji: see however Turner s.v. tero.

Hi. jhagṛā "wrangling, quarrel" (for the equivalents in other NIA. languages see Turner s.v. jhagarā) has some interesting variants, cf. dial. jhagtā, id. (cf. Skr. jhakataka-, jhagataka-, Schmidt, Nachtr.), and jhak, jhak-jhak, jhik-jhik "wrangling, altercation, dispute". Similarly Beng. ihagrā, ihakrā "quarrel": bakā-jhakā "to reprimand, rebuke, speak sharp words", cf. Pkt. jhakkia-, jhinkhia- (and ujjhinkia-, comm.), n. "reproach, censure" (vacanīyam, Deśīn. 3, 55). See Chatterji 478. The original meaning of jhagrā is accordingly rather "dispute" than "fighting" (as presupposed by Turner's connexion with Mar. ihagatne "to seize violently, collide"). Cf. root da-ga: S. $dhu\dot{n}grau$, $dhu\dot{n}gra$ $dhu\dot{n}gri$ "to rebuke, revile, quarrel", tangrao, tangrau "to reproach, upbraid, chide", tergen "to snap at, chide angrily", tegec' tagum, tegec' tegec' "to snap at, insult", regen' tegen' "quarrelling, to quarrel, wrangle", regen' regen' "snappishly, to scold", rego peto "at variance, to chatter, dispute, quarrel", raga ragi "quarrel(ling), to quarrel", ragar jhagar "a quarrel, to quarrel, wrangle", ranga rangi "to have a fierce quarrel", rangao "to become furious, raged", lag "a quarrel, animosity", ruhet' "to scold, censure, abuse, rebuke", lage lore "id., to quarrel", lakar phecan "quarrels, dissensions", laktha, loktha, lektha, laua lagta, laua loktha. lokt(h)a (etc.), id., and, according to Campbell, jigra jigri "to quarrel, wrangle". With prefix e-: eran in S. etran "snappish, irascible, to snub, speak angrily to", M. Ho eran "to abuse, chastise, quarrel, scold" (eperān "quarrel, dispute, bad terms"), K. āran "to abuse" (āparan "to quarrel"). Cf. So. túnkā- "to abuse, scold, use indecent words", Hi. arang "quarrelsome".

Hence Hi. jhagṛā and S. lakṭha, lakaṛ, ragaṛ, jhagaṛ represent an original *dagaḍ. Dravidian loanwords are, e.g., Kann. jagaḍa, Tel. jagaḍa "quarrel, fight", Kann. jaṅke, jaṅkaṇe "chiding, scolding, crying out", jaṅkisu~ "to scold, chide". The nasalized root occurs in Nep. daṅgā "dispute, quarrel, tumult", Beng. dāṅgā "fight, brawl" (to be separated from Pers. jaṅg "battle" against Chatterji, op. c. 506). Or. tokibā "to reprove", Hi. toknā "to blame", Si. tokaṇu "to scold" are ambiguous, see Turner s.v. toknu (which is perhaps a contamination of two different words, cf. tokā-tok "quarrelling").

Nep. jhāpnu "to cover", which is derived from Skr. jhampati, p.p. jhampita- "to cover" (Yaśastil.) has the following variants: chāpnu "to cover", chopnu "to cover, hide, wrap in", dhāpnu "to cover". Cf. S. dambrao "to cover, spread over, be clouded", dabao "to cover, spread over", jhampa, jhompa "to cover up, block, implicate" (Hi. jhāpnā, jhampnā), jhapre "to wrap up, cover, put a cloth on", topar "covering. to blindfold", harup' "to cover by putting something over", So. rub "to cover, put the lid on", dab "to cover, obstruct, put a dam" (yum "to cover the body with a cloth, the house with a thatch"?), etc. From the same root are derived Hi. tap "covering", top, topā, topī "hat, cap" (see Turner s.v. top), and S.M. tupri, id. The Further Indian languages have equivalents

with initial t, e.g. Sakai tup, kātop "to shut, cover" (Malay tutup, katup "shut"), Khasi tep, Mon tuip, Stieng tap "to bury" (cf. S.M. topa "a grave, to bury, to cover over", Hi. topnā, ṭopnā "to cover with earth, to bury"); with r, e.g. Mon krop, krup "to cover, conceal", Stieng grup, id. (cf. So. rub, K. ka-rūp, M. Ho hā-rub), and with d, e.g., Mon kedop "to close, shut" (cf. So. dub "to shut, cover"); with s, c, e.g. Khasi sop "to cover, to thatch", perhaps Central Sakai cop' "to bury" (but see Blagden's Vocabulary, D. 108).

References are to pages and their four parts (a-d).

13c: S. dondo "with horns bent well back" indicates a root $d\alpha$ - $d\alpha$. Hence the r may be the Proto-Munda variant of l. - 14a arātakī-: -akī-, -akā- (for -ikā-) seem to occur in substantives only, cf. visāṭakī-, viṣāṇakā- Ath. S., bhūmipāśakā- Sāmav. Br. (names of plants), bhāradvājakī- "skylark". See F. Edgerton. The k-Suffixes in Indo-Iranian, Leipzig 1911, pp. 31., 77 (who refers to lex. mṛga-rāṭikā-, f. "a certain medicinal plant", perh. a non-prefixed variant of arata-; lit. "deer's horn"?). — 18b: Pa. halāhala-, n. kolāhala-, n. 'uproar, tumult''. — 21c: candrikācamatkāra- "splendeur du clair de lune" Bhāminīvilāsa 2, 92; etc. — 24a: lex. tuvi- = tumbī-. — 24c: Add. Kh. dimbu "cucumis", Skr. lambā- "gherkin" Suśr. and cf. pp. 66, 84. — 28a: lex. kajjala- "cloud" (cf. lex. mecaka-, id.), see Wackernagel II, 1, 84. — 30a: Mon katak "nape of the neck"? — 31b: Cf. Skr. lex. parparī- "braid of hair" Vaijay. (wrongly Scheftelowitz, ZII, 2, 280). Note Skr. kavalikā-, Pa. kabaļikā- "bandage" (< "wrapping"?). — 34b: Sakai awāt no doubt < *awān. — 35a: ga-wa in S. gab gab, gabruk' gabruk' "ravenously". — 35d: kāśmala- Gopālak. 60, 27. — 36a: Prefix kaś-? Or káś-mala- = S. kolo molo? Cf. kos koso "sulky, downcast". — 42b: Cf. Burrow, BSOS, 9, 720 (kubja- from Drav.). — 44c: Cf. Hi. ghutnā, Nep. ghūro, M. mukūri "knee": K. khūni "elbow" (ga-da). — 47a: Cf. perhaps lex. kuveņī-"matsyadhānī" (matsyakaraṇḍikā ca Kṣīrasv.), Amara 1, 9, 16; kupinī-, Pa. kumina-, n. "fish-net". — 48b: khandayati from Drav. according to Burrow, Transactions Philol. Soc. 1945, 98. — 50a: po-gandais a rhyme-word of banda-, sand(h)a-, cf. Pkt. poanda- "sandha ity anye", Deśin. 6, 61 and pp. 78, 99. — 51d: Add khā.atya- Ath. S. — 52a khalv-āta-, cf. l:harv-ayatı 'cuts the hair" (Yaśastil.)? Add lex. khandaka- "nirnakhaḥ". Pkt. ganda- "laghumrgo nāpitaśca" (Deśin. 2, 99), Skr. lex. khalla- "leather" (Pkt. khalla-, Nep. khālo "skin"), rhyme-word of chālā (root dα-dα, p. 79); S. khendket', khendea, khendra = hendket'. Cf. Mon tha-kāt "to be leafless", tam-nāt "shaven, bald". — 55c: potma, cf. rethma, p. 150, and perhaps Skr. kūrmá-, m. "tortoise" (Ath. S., VS., TS., etc.), cf. S. horo M. Ho horo (So. kúlū-, Kh. kulu), id. (~ Malay kura-kura, id. ?). — 55d: A different word is gárgara-, m. "whirlpool, eddy" Ath. S. (Pa. gaggaraka-, id.), cf. S. gur gur (au) "to turn round, revolve, whirl', gurlau "to whirl, eddy", ghur ghur "turning round and round", ghur ghurau "to turn do., to stir", girgirau "to turn hastıly" (Skr. ghūrnati "whirls", Hi. ghurnī "whirling, vertigo"??). No connexion with Lat. gurges (Wackernagel II, 1, 9). A third word is Pa. gaggara- "roaring", gaggarāyate "to whirl, roar, bellow", Skr. gharghara-"gurgling", m. "gurgling sound", ghargharita-, n. "grunting of a hog", ghurghurāyate, ghuraghurāyate, Pa. ghurughurāyati "to snore, etc.", Pkt. ghurughuraï "to grunt", Nep. ghurghur "snarling", etc.: S. gar gar "gurgling, rumbling. to gargle". -- 58a campana-, cl. Tel. camaru-, camuru- "to rub", Skr. ādambara-, n. "anointing (rubbing and kneading) of the body", Harşac. Read Skr. capayati. - 59b: Nibida- "nate nāsikāyāḥ" Pāṇ. 5, 2, 32 (= cipita-, 33), "low" (Kādamb.) is identical with Nep. nepte. Class. Skr. nibida- "thick, dense" is a different word, see p. 148. — 62c: chaṭā- "mass, lump. multitude", satā- "multitude, abundance", lex. jatī- "multitude" (cf. Pa. sata-, Hi. jhūd "heap") ~ Kann. tanda "mass, crowd, troop", da'tu 'id., army", dandu army ~ Nep. dal, jhunda "troop, herd" indicate a root da-da; identity with jala- not quite certain. As for jațā- "braid of hair", see Petersson, Studien zu Fortunatovs Regel, pp. 4, 8 (IE. etymologies), Burrow, BSOAS. 12, 135 (together with śaṭā- "an ascetic's clotted hair", satā-"matted locks of hair" from Drav., cf. Tam. catai, etc.). - 63c Add M. jānjid, Ho jānjid "bamboo net", M. cāṭkā "a large bamboo basket". — 65c Add M. cangā "to bifurcate,

keep the legs wide apart", Ho cucungur "to sit on haunches". As for tandā, cf. p. 34 and M. candan, Ho candan "a step or stride", M. cāri "to stretch out or distend", Hi. caddhā "groin". — 66c: hi-ndolayati, cf. Kh. hi-nduṅ "to stoop" (∼ So. duṅgū-), S. hi-ńjit' "to drain off" ~ a-ńjet', Khasi kynjit, etc. Perhaps hi- < ki-, — 68b: Add Ho dubui "rump". 72b: Kh. jhamējham dā gimtē "in driblets falls the rain"; cf. jhimir jhimir dā no deltāej, jhīmīr jhītā dā no gimte (Khariā Along, nrs 1372, 1163). — 78c: Add M. totā, Ho totā "naked, to take off a dhoti or sāri" — 78d: Add Ho tondan "brushwood, low jungle, scrub"; Pa. thandila-, n. "bare ground" (Sanskritized sthandila-) is a variant of candila-, m. "barber". — 79a: So. usāl (compos. form sāl), Kh. usāl "skin", S. chal "skin, to skin". — 79c: Pkt. thuḍa-, n. "tree-trunk", Kann. diṇḍu "stem or trunk of a tree (from the root to the branches)". — 79d: With Beng, narī, Nep. chari "stick", cf. Tam. tari "chopping off, wooden post, stake, pillar, etc.". -- 80a jhandā : cf. Skr. jharjhara-, m. "a cane-staff" (Apte), Kann. jalle "bamboo pole"? — 81b: Hi. Beng. Or. neță "lefthanded" < "defective" like Hi. bengā (p. 88), dāwā (see Turner s.v. debre). — 82a: cf. Prasun nulū "reed" <*nada- (Morgenstierne, Report on a linguistic Mission</p> to North-Western India 66). - 88a: The words for "frog": Skr. bheka-, m. (Maitr. Up.), Hi. beg, Beng. ben, Nep. byan, ben, bhyaguto, bheguto are hardly related. Cf. Sakai tabék? (similarly Chatterji, Pre-Aryan and Pre-Dravidian in India XXII). — 89c: Pkt. upphāla- (Mrcch. 165, 9. Parab), Skr. samutphāla- "galop" (Sabdakalpadruma). The nasalized root occurs in phan- "to jump", cf. Dadhikra... patham ankamsy anv äpánīphaṇat RS. 4, 40, 4, vyátīnr áphāṇayat "made spring the steeds" 8, 69 (58), 13 (impossible Johansson, ZII. 3, 216: "schaumen machen", Caus. of phan- "to coagulate, to foam"), rsyan iva pamphanatah parvatan prakupitan aramnat Śankh. SS. 8, 25, 8, rurujur bhremire phenur bahudha harirakṣasaḥ Bhaṭṭik. 14, 28 (phan- < *phrn- Wackernagel I, 192). — 89d: with I-, cf. Middle Beng. phalanga, Beng. phāl "jump, leap" (Chatterji 512). Skr. spandate "quivers, kicks", from which Hi. phādnā is usually derived (Turner s. v. phādnu) may be a Sanskritization of Pkt. phandaï. — 90a pharpharānā: cf. Skr. pharpharāyate, id., pharapharita-, n. "twitching of a horse's lip", Pkt. phuraphurāad: (prakampate, comm. on Mrcch. 32, 13 ed. Parab). — 90b: Add M. p(h)idil p(h)idil "to move the legs and hands briskly", Kh. pud "to jump". — 91b: pundra-, m. (= puṇdarīka-), Hem. Med. — 92b pīta-: see Burrow, BSOAS. 11, 345 (from Drav.). — 97c bhetī: cf. S. bhiṭuạk' "leaf-stalk, petiole". — 98c dhella-: Pkt. dhilla- "loose" (Pischel § 150) is not connected, cf. S. dhilon dholon "loose, slack, not tight", dhil(on) dhokoć "loose, not firm", lifo loro, lifon loron "loose, not firm", lefo leso "loose", lidwa ladve "to become loose", etc. Pkt. sidhila-, sadhila-, id. (Skr. sithila-, Ved. sithira-), however, scarcely contain Proto-Munda prefixes. Since aphaeresis of si- (Mhr. dhilla- < Mhr. sidhila-, Pischel, Tedesco, JAOS. 67, 88) lacks any support (see also Chatterji 313, 498), dhilla- must be unrelated. As for Nep. dhilo "slow, slack" see below (ad 101c). - 98d. Add S. peteć "only husk without grain", M. petej chaff". - 99a. A third rhyme-word *kusa- (from gα-ḍα, cf. Kh. kuṇḍā "husk", kuṇḍu-sôr "pounding-stone", M. gundā "a pounded substance, crumbs", etc.) possibly occurs in Pkt. kukkusa- (dhānyāditusah Desîn. 2, 36), Pa. kukkusa- "the red powder of rice husks" (= kundaka-, id.! Otherwise Geiger § 15: < Skr. kıknasa-, m. Ait. Br. 2, 9, 2, comm. "sūksmāḥ pisṭāvayavāh"), cf. Nep. po-gatā "ears of rice with no grain inside", p. 50 ~ Tam. potțu "empty or blighted ear of corn", Burushaski pot, Balti phut "chaff, husks" (and Bur. b.lta "bald, scaldheaded, hornless"). Other Munda words in Burushaski (partly adopted from Shina) are, e.g., khūt, (cf. Balti khut khut) "short" (cf. p. 112); dudūn "stooping" (~ Kh. hindun, So. dungū, id.); j^ker, "fork" (< Shina c^ker, cf. Nep. coko, p. 156); g^ti "assembled, together" (Shina, id., cf. Ho guți "crowd", p. 55); dim "body, person" (Shina id., cf. p. 68); dīp "a wink" (Shina dīp thōiki "to wink", cf. p. 133); joto "small, child, young", jut "small", jotp^t "small children", c^t- (ch^t) "short, low" (cf. p. 152); perhaps yai, ye-ič "to appear, seem" (~ *geć, cf. So. g'ë "to look, seem, appear", gij "to appear";

cf. Khowar yeč "eye'"?); etc. See Morgenstierne's Preface to Lorimer's Burushaski Grammar I, XII f. and cf. P. Poucha's theory of a Munda substratum in Yaghnobi. — 99b: Skr. vantha-, m. "servant" Harşac. — 101c: Add S. dundha "fool, blockhead, stupid", dol dol "indolent, lazy, sluggish", dhosmos "careless, negligent, lazy" (echo-word like loro boto "stupid", see n. 143; cf. M. dhoso "lazy"), lelha "foolish, stupid", M. lālhār "fool, rash", S. landhea, londhea "lazy, sluggish, indolent", M. Ho lāndiā "lazy" (: S. landha "stubble, utterly poor") ~ S. loro "stupid". Cf. Kann. dadda "blockhead, stupid man", Pa. datta-, dattu- "stupid" (: dandha- "slow, silly, stupid", buddh. Skr. dhandha-, see Andersen, Glossary s.v., Geiger § 38 n. 4, Kern, Toevoegselen I. 50), Ved. tandrayú-"lazy", tandate, etc., Nep. tuto "stupid", tol(h)o "an absent-minded person" ~ Nep. jaire "fool, idiot", Western Pahari (Cameālī) jalha "dumb" (cf. S. lelha, Nep. tolho), Hi. caūḍū "blockhead, dolt, fool" ~ Hi. laṭṭhar "slow, lazy", Nep. laṇṭha "fool", lāṭo "deaf and dumb, stupid" (cf. Skr. badhirá-, Kann. hotta, p. 102), lote, lojho, loso "slack" (cf. Burush. Iāša), Skr. lex. locaka- "nirbuddhiḥ" (Hem. Med.), Pa. lāla-, lāla- "silly" (Skr. lālaka- "jester", Kern, Toevoegselen I, 157), Skr. lata- "fool, blockhead" (Apte). Skr. jada- "foolish" < "torpid"? (Liders, KZ. 42, 194, n. = Phil. Ind. 180 n. 1). - 102d: Mar. maind "heavy, slow, stupid" (Bloch 75: "tout à fait obscur") ~ S. mãerã "cleanshaven" (p. 104), M. mäerā(hā) "one having little or no moustache". Add Nep. mātho "slow" (= S. matho, p. 105) and S. modhu "sluggish, slow" (= Hi. modhū, Tel. moddu, Tam. mottu. etc.) ~ Nep. bodho "blunt, sluggish, torpid", Hi. bhodū "stupid" (see above caūdū), Beng. bhodā "a lumbering fellow, fat and foolish" (Chatterji 516; blended with bα-dα "fat", p. 145), Nep. bholo, Si. bhoro "simple" (Skr. lex. bhela-, Tel. bēla, Pkt. bhambhala- "foolish"), Guj. phātḍo "eunuch, fool". — 104d S. marca (cf. M. marcā, Kh. mārcā "fallow"): the same formative in Ho darca "beard" (p. 64). — 105b Add Pa. camarī- "a kind of antelope". — 110d: Add Semang bit "to turn", habit "twisted", Bahnar hauēn "with distorted limbs", uit "to roll into a round shape", etc. (see Blagden's Vocabulary T 250, 265, B 175). — 114d: cf. Skr. lex. nadaha-. — 115a lant-: Guj. latho "paramour" (wrongly Turner s.v. lantha). — 117b: cf. ullalayati, Carud. ("lockend" Morgenstierne, Über das Verhältnis zwischen Carudatta und Mrcchakatika, p. 19). But ullalayitvā (Pañc. 4, 34, 8 Bühler) means "jumping up", cf. sam-ul-lal-"to jump" (Pūrṇabh. 87, 19). — 119c tarutūlikā-: cf. Pa. tuliya- "flying fox", Kann. tõle "large bat, flying fox". — 121d: Add Hi, kirkirā "gritty, sandy". — 123b: For the prefix sr- (Proto-Munda ser-sar-) cf., e.g., Srbinda- RS.: Baindá- (cf. Acta Orient. 17, 307 ff.), lex. srkandu-, f. "itch, scrab" : kandū- (kudū-). — 124d: Prefix ni-, cf. Pkt. nijjhara-, nijjhūra- "decrepit" (jīrnam Deśīn. 4, 26), Mar. nijhūr, Nep. nijer "slender, weak": Skr. jarjara- "decayed, worn out, perforated", jharjharita- "exhausted, withered"; cf. S. jhadga, jhadgoć, jhedge "torn, worn out, dilapidated", jhargoć "in disrepair", jhador pador "torn, dilapidated", etc. (cf. p. 134). Root da-da, e.g. Nep. thotro "old, worn out". Here may belong Pkt. jhūsi(y)a- "kṣīṇaḥ, kṣapitaḥ" (see Pischel § 209). — 126a: Cf. perhaps M. Ho tusiri "to wear, put on, dress, adorn" (prefix tu-). — 127a: Add So. ámbā "to low". - 131c: Ramaswami Aiyar only denied the possibility of "fricatisation" of medial d (but cf. Winfield, A Grammar of the Kui Language [1928] 6, 223 f.!). In the Journ. of the Dept. of Letters (Calcutta Univ. Press) 19, 1929, 6, n. 1 and in Ind. Ant. 59, 1930, 201, n. 7 he showed the change t > s to have taken place even before back vowels. See also Ind. Hist. Quart. 10, 37 ff. (Tam. īr, Gondi ēr "water" > Kui ēsu, Kuvi \tilde{e}_{ju}). Tuttle l.c. (and Am. J. Phil. 50, 1929, 148) explains t > s by the palatalizing influence of a preceding i. - 133: The Austro-Asiatic character of this variation can hardly be questioned, cf. Mon [thau] "old", ye-thão "old man", Khasi k-thau "grandfather" ~ Khasi yau, kyn-iau "old", k-iau "grandmother", Mon p-yu "to be old", pe-yu "old age"; Mon pe-tòm "night" (Central Nicobar hatòm, id.) ~ yòm, kha-yom "to be dark", Semang lem-yom "evening" (cf. unnasalized *top in Semang top, Sakai atob "evening", Central Sakai töp "night" ~ *dup in Kh. idib "evening" if < *ĕ-dup ~ *rup in So. orub, K. sin(ā)-rub, id. ~ *lup in S. lupak', lumpak' "to get dark" [cf. Kenaboi jĕlúm "eclipse"] ∼ *yup in Khmer yup, Khmus yopa "night", Sakai [Kerbu river valley]

nayup "sunset", S. [M. Ho] ayup' "evening". With a different vowel: S. kadam kadam, galam galam "in the dark, at night" ~ Sakai klam "night", Malay kelam "dark", malam "evening, night", gĕlap "dark", etc.). In Mon there is a regular interchange of initial t(h) and s. Other instances are: Semang yoh ~ Besisi roh "bough of a tree", Semang Kedah hijöb ~ hěröb "to know"; Old Javanese cucuk ~ Batak tuk tuk, Bisaya tok tok "beak" (Wulff, Über das Verhältnis des Mal.-Polynesischen zum Indo-Chinesischen 56 f.); in Indonesian there is a frequent interchange of t/s (e.g. Malay putar ~ pusar "to turn") and of d/r (Old Jav. dan ~ ran, cf. also R. A. Kern, Bijdragen tot de Taal-, Land- en Volkenkunde van Nederl. Indië, vol. 102, 327). — 134a: Cf. Nep. dhodro, dhotro "hollow", Ass. dhond "hollow of a tree", Guj. toto "pipe, throat", Skr. susirá-, śusira-, Pkt. jhusira- "full of holes" (Pischel § 211); see above p. 130 for Drav. cognates. Cf. S. dhodea, dhodra, dhodeo, dhodyo, dhode(y)o "hollow", dhodro, dhedre "full of holes, holey", dodhor, dondhor, dander, dondor, dondorpak' "a hollow, cave, den". A rhymeword of dander is Skr. kandara-, m.n. "cave, glen" (Mhbh. Rām.); not composed of kam + dara- (Pott, Etym. Forsch, I, 1833, 166. Benfey. Pet. D., Wackernagel II, 1, 85, Charpentier, Monde Or. 18, 1924, 13), cf. kukundara-, n. Suśr., kakundara- Yājñ., lex. kukundura-, n. "the cavities of the loins", kotara-, m.n. "hole in a tree", perh. lex. kukūla-, n. "a hole, ditch, filled with stakes" ~ S. kondha "a cave, hollow", khondlak' "a hole in the ground, ditch, full of holes", khor-lon "ditch, cavity", khoyo "a hollow in a tree", Ho kukuru "a hollow tree", etc. (Cf. Ved. kāţá- "depth, hole"?). As for lex. kandara-"ankuśah", cf. S. kondę "crooked, bent", etc. — 135b: Erroneous explanations by Wackernagel, II, 1, 9 (jhiñjhī- an onomatopoea), Pischel §§ 211, 326 (jhāruā-, jharuafrom Skr. śarv- "himsāyām" or ksar-), and Pisani, Geolinguistica e Indeuropeo § 206 (: Lat. grillus). Cf. Skr. lex. śiri- "locust" ~ Hi. tīrī, id. — 135c: Apte quotes Skr. cintidī-. — 135d: Cf. Bahnar, Churu bit, Jarai pit "to close the eyes"? — ibidem: Pkt. thūna- "thief" (hardly from *(s)tūrṇa-, Pischel § 129) is no doubt connected with Tam. tonți, etc. (p. 130). Mon klòt "to steal", kamlòt, palòt "thief" suggest an Austro-Asiatic origin of lunthayati, If so, the Drav, words must be loanwords. — 136d: Kirāta-(lex. kilāta- "dwarf") may be a Drav. word on account of Pkt. cilāda-; palatalization of k is, it seems, unknown in Munda (except for such cases as S κ "excrement" \sim Bahnar ik, ic, Halang ek). Cf. also alakta-, m., lākṣā-, f. "red lack" < *lakṭa ~ S. lahi "lac insect", lahti (M. lahti) "wristlet made of lac"? — 137b. As Professor F. M. Th. Bohl kindly informs me, Accadian kurkizānu means "pig". He refers to Br. Meissner, Beitrage zum assyrischen Worterbuch, II no. 33, p. 39 f. (= Oriental Inst. of the University of Chicago, Assyriol. Studies No. 4, 1932), and to B. Landsberger, Die Fauna des alten Mesopotamien (Abh. Sáchs. Akad. d. Wiss. XLII/VI, 1934). p. 101. — 139a. Add Skr. lex. tala-, talaka-, n. "pond", Mar. talē "tank". — 140b: Cf. So. jān-lō- "waste land, village" (< *"clearing")? Shina run, Burushaskı rūn "open jungle with few trees, open grazing ground on hills" may be of Munda origin, cf. Khasi thun-run "naked" and the parallel Nep. phānga-phunga "naked, denuded, esp. land denuded of trees". — 140c: Add K. dēngrā "log". — 140d. Add. S. dhokra "poor, indigent". — 142a: Kh. cokā "skin of a fruit" (Tam. tokku) ~ Beng. chol "rind" (p. 79) and N. chēṅgā, Gondi śēngā "husks" ~ tuṣa-, busa- (p. 98 f.). Cf. Mon. thanok, sanok "skin, shell" from sòk "to peel, to skin". — 142b: Cf. Tam. tavvu "to leap, spring", tāvu- "to jump up, skip", Kann, avvalisu "to jump" (if < 'savval-). The Munda evidence (add M. lāphuā "a species of bird that hops about") is not sufficient to decide between Munda or Drav. origin. — 143d. Johansson, ZII. 3 (1925), 234 rightly connects pinda- with panta-, phāṇṭa-, etc., but still upholds the IE. origin. Note piṇḍa- : pṇṇyāka-, m.n. "oil-cake" = bhāṇda- : Pa. bhāṇaka- "a jar" (see below). Erroneous etymologies of piṇyāka- : Liden, Studien zur altind. und vergl. Wortforschung 87 f., Johansson, op. c. 233. — 144a: kohanda- < *kumhanda-? (Pischel § 127). S. kohnda "species of pumpkin; scrotum" is perhaps a Pkt. loanword. — 144b. If kūśmá- (Vāj. S., Kāth. S.), kūsmá- (Maitr. S.) are the older forms of kūśmāṇda- (Wackernagel I, 225) this explanation cannot be upheld. Their meaning is however not certain. — 144c: K. barbatti "pulse" (from Aryan?).

144d: Hi. mījū "lentil"! — 145b: Skr. poṭalita- "kudmalitaḥ" (Yaśastil.), cf. S. potkoć, potkol, Kh. potki "to germinate, shoot" (S. potra "big-bellied", Kh. potri 'pregnant", S. puti "to swell"), So pēl "to swell, grow in bulk (seeds)", Tel. pottakaruku "a bulging ear of corn, a swelling pod, ready to burst". - 145c: Another word for "belly" is Skr. lex. phanda-, m., phanda-, n. (Ujjvaladatta to Unadis. 1, 113), which Lüders, Kuhn's Zeits. 42, 1909, 204 (Phil. Ind. 188) rightly connects with phafa/a-, phana/ā-, phuta/ā- "expanded hood of a serpent" (Johansson's paper entitled "Die Sanskr.-Wz. phan- und phanta-", ZII. 3, 1925, 212-234, is worthless). Cf. 1) with a; Sgh. bada "belly" (Kui bandi, Tulu bañji, Tam. vanti, panti, see p. 132) ~ Skr. bhāṇḍa-, n. "vessel, pot, box", Pa. bhāṇaka- "jar" (cf. kábandha-, p. 100!) and perh. kamandalu-, m. "water-pot used by ascetics" (lex. kamatha-, m., id.; cf. non-prefixed H1. mețā ~ Beng. peță "earthen pot. pail"). Ramaswami Aiyar, Ojhā-volume 18, derives phanda- from Dravidian. 2) with u, o, e.g. Nep. bhūri "belly" ~ bhurko "an earthen jar" (cf. Tel. bojja = potta, Kann. bojje "belly" ~ Tel. bondu "round, globular". Kann. bottu "a round thing", buddi, buddu "roundness", etc.). Cf. the words for "navel" (Tel. boddu, Kann. budde = M. Ho buti, So. pūdī-) and "teat" (Pkt. bonda-, bontana-, n., Mar. bod, Beng. bat, bota). A difficult word is Pa. bondi- "body", Pkt. bondi- "form, face, body", which cannot be kept apart from Tam. ponti, Tel. Kann. bondi "body" (cf. Tam. pontai, putai, poti, puri, id., pottai "anything bulky, body"). While K. Amrita Row, Ind. Ant. 46, 35, and P. V. Ramanujaswami, Deśīnāmamālā II, 65, derive the Pkt. word from Dravidian, Luders, Phil. Ind. 567 f., points to the Skr. equivalent vindi- in the Mahāvastu. If this is really identical with vrnda-, n. "multitude, host" (which was known in the Vedic period, see Lüders 568), it is unlikely to be a Sanskritization of bondi- and must rather represent Pr. M. *w-er-nda (infix -er-, cf. trut-, vrud-, perhaps saranda- = sānda- "lizard", śringāra-, p. 126), cf. lex. varanda-, m. "multitude, pimple, heap of grass" (Mrcch. 7, 4. cf. Morgenstierne, op. c. 28), varandaka-, m. "mound of earth; round, capacious". - With phanda- Lüders also connects phaná-, m. "scum, froth" (Taitt. Br.) and phála-, n. "fruit". But phaná- (buddh. Skr. phāni- "molasses"), which cannot be separated from manda- "foam, froth, scum, cream", Nep. phij, Mar. phes, Kafiri (Ashkun dial.) piere, id., may belong to a different word-group (cf. S. pher, photo "foam. froth"). Skr. phéna- (since RS., late Skr. phena-, Wackernagel I. 194, Pa. Pkt. phena-) 18 ambiguous, cf. Old Church Slav. pěny, Lith. spáinė, Osset. fing (Wackernagel I, 120). — 147a: Skr.pela-, m. "testicle" ~ phala-, n., id. (Epics, Suśr., see Luders, Phil. Ind. 189) ~ Nep. phul, id. ~ Tulu bittu, Tam. pitukku, id., S. piţiri "swelling of the glands as in mumps", So. pēl "to swell, grow in bulk (seeds)", etc. The last word suggests identity of phala- with phála-, n. "fruit" (since RS.), see also above (ad 145b). Dravidian origin (Gundert, ZDMG. 23, 519. Caldwell. Comp. Gramm., 2nd ed. 484, A. Master, BSOAS. 11, 301) was questioned by Kittel, Kann.-Engl. Dict., Preface XXIV, Bloch, BSL. 25. 17. BSOS. 5, 740. For the literature on this word see Johansson, ZII. 3, 232, Kuiper. Acta Orient. 16, 305, n. 2. — 149a: Pkt. rokkaņī "horned", cf. M. runkā "pointing straight forward (of horns of animals)". — 150b: Skr. tota- "small, little" (Apte)?. — 151b: With letra (cetra), lenda (cenda, tenda) "small, young", lenda turia "small, the youngest one, poor, destitute", etc. cf. Ho Kw. fāić (< *lān-ić, cf. KwErnga lāńī), N. lānā, J. landa "child" and, no doubt, Hi. laūdā "boy" (see p. 78 on Nep. daūthe), larkā "boy, son" (Beng. lerkā, etc. : S. lerke "youngster, lad, child"), to be separated from Panj. ladikkā "spoiled child" (Turner s.v. larko), see p. 115. — 152c: Nep. cilkat, cirkat "small children" is an identity-compound (Pkt. cilla- and cf. K. gandā "boy", pp. 50, 99). cf. cilli, f. "having children". — 152d: Hi. nanhā "small"? (cf. Turner s.vv. nāni "baby", sānu "small"). — 153c: Nep. cose "with protruding lips", coso "point. edge. corner"; Kann. totţu "point, nipple". — 155a: Tam. munai "point, sharpened end, cape" < nunai? — 155b: Kh.surru 'navel". — 156a: Add Beames, Compar. Gramm. of the Mod. Aryan Languages of India I (1872) 210 ff. (palatals > dentals or cerebrals). — 156b: Nep. dhoknu "to bow" ~ So. dungū. Kh. hindun "to stoop" (Javanese doko, děku, Malay tunduk, id.). — 156d: Hi. dag, Nep. deg, dek "pace, step".
